AGED LEADER OF FEDERATION DIED EARLY SATURDAY

San Antonio, Tex. Dec. 13.—Samuel Gompers, for more than 40 years president and active leader of the American Federation of Labor, died here this morning after a futile but gallant fight against the weakness that came with age and general disorders from which he had suffered for many months. Mr. Gompers was 79 years old. He died on American soil, realizing his last hope.

The labor chieftain died surrounded by his comrades, many of whom had fought beside him, shoulder to shoulder for a generation in behalf of the economic principles he expounded.

The end came in a hotel 11 hours after his arrival from Mexico City. His last words were spoken to his nurse about an hour before he died, were a prayer for the American people and American institutions. Realizing that he was losing the battle so stubbornly fought he turned to her and whispered:

"Nurse, this is the end. God bless our American institutions. May they grow better day by day."

Shortly before he lapsed into the unconsciousness which presaged the end, President Gompers gave a few simple directions for his funeral and bade life-long friends farewell.

Studebaker October Sales

SOUTH BEND, IND., DEC. 8.—Studebaker's October Sales exceeded in value those of any other automobile manufacturer in the world except Ford Motor Company.

The corporation also broke all of its own October sales records, beating October 1923 by 68 per cent and October 1922 by 116 per cent.

Moreover, while exact figures are not yet available, it is known that the November sales are far ahead of those of any other November in the corporation's history.

The reason for these exceptional records, point out Studebaker folks, is the quality and value built in the new cars at the prices at which they are sold.

The quality of materials and workmanship is made possible by two outstanding features of the corporation's manufacturing.

Studebaker plants manufacture these cars completely in five Duplex and ten closed body models, on three separate chassis, eliminate middlemen's profits and thereby lower cost.

Through Studebaker's large volume of production the overhead cost per car is reduced to the minimum, because it is spread over so many thousands of cars.

This permits the use of higher quality of materials and workmanship at prices that would be impossible of the cars were built in smaller quantities.

DR. S. RAPPORT of Durham

will be in Roxboro at DAVIS DRUG STORE every first Wednesday in each month to examine eyes and fit glasses. When he fits you with glasses you have the satisfaction of knowing they are correct.

TO SEE BETTER SEE ME. My next visit will be Wednesday, Wednesday, January 7th, 1925.

POULTRY LICE AND MITES ARE HARMFUL

Poultry lice and mites are found wherever poultry is raised and they retard growth and development as well as egg production.

There are several species of lice and they are referred to in respect to the place they are found on the fowls as head lice, tall lice, body lice and so on. They are very active, and while they do not suck blood, they live on the plumage and scales of the skin and do not spend much of their life off the chicken's body. Their mouth parts are biting and their food consists of the feathers and scales of the skin on which they live. They are pale in color and the eggs or nits are usually found around the vent feathers of the bird.

It takes a week for the eggs to hatch and the adult stage is reached in 17 to 20 days after the laying of the eggs. If they are not checked the birds will be swarming with lice in a short while. Lice are spread rapidly from one bird to another, but they do not live long when off the body, due to lack of warmth.

In treatment of these parasites it is not enough to treat once and then expect the birds to be rid of them. Lice multiply very rapidly and must be kept constantly in check. It is possible to practically rid the poultry of lice by proper care and treatment.

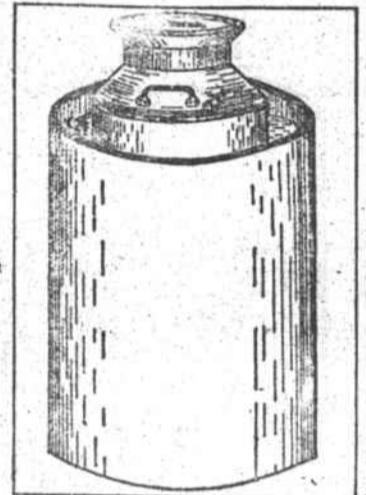

There are several methods of treating for lice and one of the most effective measures is the use of sodium fluoride, says a writer in the Successful Farmer. This is a white powder and can be purchased at the drug store. Only a very small amount is needed for each bird. From the fact that lice live only on the body of the birds it is essential that each bird be treated individually. The powder is applied with the fingers and a pin placed in the region of the head, neck, back, tail, vent and under each thigh and wing. Rub it into these spots or places so that it gets to the base of the feathers where the lice and eggs are. They should be treated as often as necessary and a little pinch of the powder in each of the show-windows will make a great work of the lice.

A homemade powder for dusting may be made by mixing three parts of lime to one part of soda ash and the amount of enough cement to make up a pound and make a powder. The bird is held with its head down and the powder worked into the feathers. A special obturator is rather wide for working into the feathers and is a mixture of part blue obturator to two parts of lime. Only a small amount of this powder, the size of a pea, is applied in each of the show-windows under each wing and the region below the vent. This will reduce the numbers of lice. Lice that seem to have little to do with the wing and head lice.

MILK COOLING TANK QUITE EASILY MADE

A milk cooling tank made from a section of porous drain tile and some cement is described by Lewis G. Reynolds of Wayne county, Indiana. He sends along a sketch showing how the cooler looks when in use, says the Indiana Farmer's Guide. He says:

"Take a length of ordinary red tile, 18 inches in diameter, and close one end of it by setting the tile upright in any level spot, a floor, a board or smooth ground. Pour into it to the

Drain Tile Used as a Cooling Tank for the Milk Can.

depth of about an inch and a half, any good portland cement, mixed fairly thin with water. Add a little fine sand to the mixture, if you have it, or the pure cement mixture will do. Let it stand until it hardens. It is then ready for use.

"Fill the tile with water and place the can of milk in it. The water seeps through the pores of the tile, evaporates on the outside surface, reducing the temperature of the water on the inside to the minimum and holds it at that lower temperature for an indefinite time. If there is a slight breeze blowing, which increases the evaporation, the temperature of the water will get quite low—as low as 55 to 65 degrees—and remain so."

Mr. Reynolds says he knows it will actually "do the trick every time and is little trouble and expense.

Liberal Feeding Gives Best Results in Dairies

A successful dairyman has even been liberal feeder. The stringy feeder or one who measures out feed in meagre quantities is never to be ranked among the successful. A visit to a barn where records of high rank are one of them possibly a world's record are being made showed the boy feeding a large variety of concentrates in liberal quantities along with fine alfalfa and silage. True, each cow was being fed according to the amount of her milk production, yet the allowance was very generous. To feed each cow in proportion to her daily milk production is economical and need not detract from feeding an amount that will stimulate her greatest milk flow.

A higher feed bill usually goes with cheaper production per unit. Recently some figures from a herd were shown. One cow that had eaten more feed than any other in the herd had at the same time produced butterfat at one-third the cost, as compared to some others in the herd. A hearty, rugged dairy cow has a vigorous appetite. To feed her well is to enable her to develop her full capacity. Judgment, of course, must be used and feeds that are economical and suitable must be supplied. For heaviest production and for cheapest production

LAND SALE

Under and by virtue of the power vested in me in a deed of trust executed by H. Gibbons Brooks and wife Carrie and L. R. Harris to J. J. Brooks on the 22nd day of Dec. 1919 duly registered in Person Co. in book 17 at page 157, and by request of the parties interested, I will, on the First Monday in Jan. 1925, sell at public auction for cash in front of the Court house door in Roxboro, that certain tract of land lying in Wooddale township, Person County, bounded on the East by R. H. Bailey, South by Robt Carter, West by Est. of J. A. Long, and on the South by Earl Mitchell and E. W. Brooks; Containing 11 1/2 acres more or less, known as the Vaughan tract and purchased from E. A. Walker and wife.

T. C. Brooks, Trustee. This Oct. 29th, 1924.

Norfolk & Western

Schedule Effective July 6, 1924

Sale of Land!

By virtue of the power vested in me by two deeds in trust executed by Robt. Rogers and wife, Bettie, recorded in Person County, in Bk. 2, page 529 and 581, and by direction of Robert himself, default having been made, I will, on the 17th DAY OF JANUARY, 1925, at 12 o'clock, noon, sell for cash by public auction, in front of the court house door in Roxboro, the tract of land and Robert bought from Dr. W. B. Risp, lying in Allensville township, Person Co. N. C., and bounded on the North by lands of C. R. Russell on the East by Victor Kaplan and the Tingen, on the south by the Jim William place, and on the West by lands of Tom and Reuben Clagton containing 160 acres, more or less. This 16th day of Dec., 1924.

T. C. Brooks, Trustee.

EXECUTOR'S NOTICE

The undersigned having qualified November 24th, 1924, as Executor of the last will and testament of Z. Gentry, deceased, late of Person county, this is to notify all persons having claims against said estate to present them to the undersigned before December 8th, or this notice will be pleaded in bar of their recovery.

Persons indebted to said estate please make immediate payment this December 8th, 1924. 6-t-2d G. W. Gentry, Executor
