Recruits

Brad Daugherty and Warren Martin.

The combination of last year's class, with this group should result in the Tar Heels finishing the decade like they started it: repeatedly reaching the Final Four.

Last year's top recruiting class belonged to Louisville. Just a little food for thought:

• Former North Carolina pitcher Scott Bankhead made his first major-league appearance May 25. He pitched four innings of relief for the Kansas City Royals. He was just

recalled from the minors a few days before. Earlier in the year, Bankhead held the Royals scoreless for seven innings, while pitching for his minor-league squad in an exhibition game. It was rumored that he was on his way up.

• Last year's number one draft choice and former North Carolina catcher B.J. Surhoff was named the Milwaukee Brewer minor-league player of the month for April. He hit .436 and drove in 10 runs. Surhoff could make it to the parent club this year, probably in Sep-

tember when rosters are allowed to increase. Surhoff has been rated as a can't-miss prospect.

• Maybe the Los Angeles Lakers should make a deal with the Philadelphia 76ers for the number one choice in the upcoming National Basketball Association draft. They could certainly use another big man. Their inability to play both Akeem Olajuwon and Ralph Sampson effectively revealed their need for a new power forward. Kareem Abdul-Jabbar will not play much longer; what are they going to do then?

Porn

The report also includes detailed descriptions of sexually explicit photographs, and of dialogue and action in the movies.

Commission Spokeswoman Dee Kuhn said Monday that listing pornographic materials was part of the panel's mission.

"They were a fact-finding commission. This was part of the fact-finding," she said. Kuhn said explicit descriptions were provided in the reports because when law enforcement agents are seeking to prove

something obscene, they must describe it.

But, Lynn said, "I cannot imagine that this commission which claims to believe that distribution of sexual material is a national menace would reprint what amounts to a national bibliography of porn, with graphic descriptions of every conceivable — and some inconceivable sex practices."

Kuhn said the report and lists were based on investigations of 16 adult bookstores in several cities:

Washington, Baltimore, Miami, Philadelphia and Boston.

"Materials were rented, purchased or obtained from the United States Postal Inspection Service, the United States Customs Service and state and local police agencies that has been seized or otherwise obtained during the course of official investigations of commercial obscenity sales and distribution," according to the report released by the ACLU Monday.

Hormones

4 and 8. Four showed boys were better, three found girls more adept and the rest showed no significant difference between the sexes.

"Contrary to popular belief, there seems to be no evidence to support the theory of male superiority at this age," she said.

Benbow said her studies looked only at the brightest children — 7th graders who scored in the top 3 percent on standardized tests.

Those youngsters were given the math portion of the Scholastic Aptitude Test, an exam usually taken by high school juniors and seniors. The boys consistently outperformed the girls, and the gap widened at the very brightest level.

Scores range from 200 to 800. Among 12-year-olds who scored over 500, there were two boys for every girl. Over a 600 score, the ratio was four to one. And over 700, it was 13 to one.

Benbow examined whether

upbringing or some other social factor could explain the boys' superiority.

She said she found no significant difference between boys and girls in their attitudes toward math.

Computers

owners and operators of microcomputers, Parker said.

The Training program of MSC offers classes, presentations, and a software library located at 232 Davis. Students can check out computer programs on floppy disks after signing an agreement not to copy them. There are also many software programs designed by UNC professors for students in English, math, chemistry, psychology and many other subjects.

Parker said the computer labs are becoming increasingly popular among students. Students usually

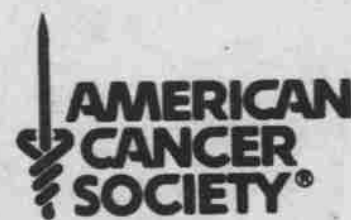

first come in to use the facilities after a professor makes an assignment that must be done on a computer. The students soon come to prefer to use the personal computers for other assignments, she said.

The microcomputer center in the Undergraduate Library opened last fall and has since served over 6,000 people.

The microcomputing facility located in Room 307 of Venable Hall opened in the spring and over 10,000 people have used it in one semester, Parker said.
