BRING THIS

No. 26-28... Fifty Cents. Quam... All Druggists.

RICH MEN IN KANSAS.

Every Town Has One Who Is Measured by a Local Standard. There are no rich men in Kansas towns. The men who own a million dollars' worth of property number less than half a score in the whole state.

LANGUAGE OF JEWELRY.

Symbolism is Carried Into Accessories for Female Adornment. Human fancy, which looks for symbolic meaning in everything, has found the proper symbolism of jewelry.

The bird of gems, the diamond, is the symbol for elegance. It suits all the blond and the brunette. Pearls symbolize tears in a popular superstition, and by this par-ticularly should not wear these gems at the sea, for the wearing of them at the wedding indicates the coming of a painful day.

THE FLYING BICYCLE.

Aerial Wheel Will Never Be Realized, Says Maxim. Suggestions of a flying bicycle have been numerous in recent years, but Hiram Maxim, of Maxim's gun fame, gives cold encouragement to the ambitious wheeler who would rise with the lark and while away his leisure in mid-air.

It will never be possible for a man to drive the flying machine with his feet, Mr. Maxim told an interviewer the other day, because the power apparatus developed in the human hand is not strong enough to sustain his own weight.

On the whole, this assurance of Mr. Maxim's will probably be received with consolation rather than disappointment, to cyclists.

Just the Place for a Barn. An old Sussex farmer visiting London for the first time was taken to St. Paul's cathedral. He stared about him in amazement, and his astonishment at the magnitude of the building seemed too great for utterance.

THE DOG

Eaten by Many Races. "The more we know we like dogs," writes a writer in the National Geographic Magazine. Perhaps it is the habit of the Chinese to eat dogs that they still regard the dog as a noble animal, and as one of the most savory morsels.

These same customs that are so repulsive to us as to eat like a kind of semi-cannibalism exist, nevertheless, among the people of classic antiquity. History tells us that in early times the dog was always regarded as an edible animal.

The savages of the Amazon, for example, are reported to have eaten dogs. In the Philippines, the natives are said to have eaten dogs. In the East Indies, the natives are said to have eaten dogs.

It is really remarkable what a part the hog-pen plays in the well-being and prosperity of the country. There are in the United States 1,000 or 40,000 villages of different sizes, and the most of them have hog-pens and typhoid fever.

It has taken a long while to convince even the most intelligent settlements of the value of scientific sanitation, and in the large cities it is a constant fight to abate nuisances and to get people to observe ordinary laws of cleanliness.

After awhile the people of these small places will see the importance of a different policy. When they realize that the existence of hog-pens in a community will keep away all settlers whose presence would be desirable, and when they see their property depreciating in value because no one wants to live in villages where no attempt is made to prevent disease, they will see the importance of a different policy.

Engagements F. De S. "This is the end!" he angrily exclaimed. "Give me back my engagement bicycle!" "It, ah!" she laughed, mockingly, and that was all.—Puck.

MILK AND MICROBES.

A Fruitful Source of the Ills Which Afflict Humankind. Millions of Bacteria in a Thimbleful of the Lactical Fluid—Protective Measures Employed in All the Large Cities.

Nowadays, when there is an epidemic anywhere of typhoid fever, one of the first things which physicians do is to inquire into the milk supply. This is not because all such outbreaks are traceable to impure milk, but because milk has been found to be one of the most fruitful sources of contagion.

A thimbleful of milk has been found often to contain millions of bacteria. Most of these are harmless vegetable germs, but among them sometimes are germs of typhoid fever and tuberculosis.

The sterilization of milk, through the agency of heat, removes this peril. A rich New York merchant has for several summers supplied sterilized milk to tenement house children, with an immediate result in reducing the mortality among them.

The possibility of preventing disease by guarding against the transmission of disease microbes is something that we owe to modern science. Thirty years ago, in such diseases as typhoid fever, all that doctors could do was to treat the individual case and prevent immediate contagion.

By the concerted action of legislatures and health authorities, and the watchfulness of an intelligent public sentiment, the knowledge which has been gained of disease microbes can be utilized to prevent their transmission through milk or their vehicles of contagion.—Youth's Companion.

He Cut Her in Two. She was nervous and scared as she penetrated the city's purlieus. A freight train was being switched down there, and a loud-voiced switchman was giving instructions to another of his craft.

Zana's Sister. The proverbial unattractiveness of new infants was illustrated afresh in the little sister which came to Zana's house. Zana liked and admired the youngster. But Zana is a clergyman's daughter, and is being reared to speak the truth under all circumstances.

Simple Enough. Pat—They do say the car next to mine is the most dangerous. Mike—Bogorra, then, why don't they save it off?—Household Words.

CHOICE GROCERIES

A. W. RIVENBARK'S, Next to Corner Mulberry and Water Streets, Where You Will Find Anything You Need in The Grocery Line!
