TOU know that such a combination would be carried through the digestive tract without giving the milkproducing and fat-producing food a chance to be assimilated. The lint on old style hulls acts the same way. It forms a pad or cushion-like covering around the concentrates that prevents the digestive juices from extracting the full amount of protein.

Easy to handle because sacked. They mix well with other forage. They take less space in the barn.

Mr. C. K. Henderson, Aiken, S. C., says: that he would rather have Buckeye Hulls than any others. He uses Buckeye Hulls altogether - says they are cheaper and better.

To secure the best results and to develop the ensilage odor, wet the halls theroughly twelve hours before feeding. It is easy to do this by wetting them down night and morning for the next feeding. If at any time this cannot be done, wet down at least thirty minutes. If you prefer to feed the hulls dry, use only half as much by bulk as of old style hulls.

Book of Mixed Feeds Free Gives the right formula for every combination of feeds used in the South. Tells how much to feed for maintenance, for milk, for fattening, for work. Describes Buckeye Hulls and gives directions for

using them properly. Send for your copy to the nearest mill. The Buckeye Cotton Oil Co. Dept. J
