

## PLACE 13 MEN IN 1-A CLASS

Draft Board Classifies 42 At Meeting Last Week

Thirteen men were classified 1-A, available for military service, at a meeting of the local selective service board last week.

A total of 42 were placed in different classifications at the meeting, according to Mrs. Gilmer A. Jones, board secretary. Classified 1-A were Edward

Franks, Doyle W. McMahan, Dan H. Brabson, James E. Keener, Furman E. Green, Lewis C. McCall, Watsel L. Holland, Vester J. May, Ralph J. Hughes, Billy D. Cope, Charles E. Myers, James F. Stewart, and James R. Angel.

Placed in 1-C (enlisted) were Robert W. Pipes, Bert E. Walldrop, and Ed B. Angel; 1-S-H (high school student) Bobby A. Solesby; 1-D (member of reserve component or student taking military training) John M. Archer, III; 4-F (physically, mentally or morally unfit for duty) Earny Southard, Odell Hopkins, Roy Roper, Lawrence E. Phillips, Willis G. McCall,

## Dairymen Failing To Supply State's Milk Needs; Good Dairying Field Open Here

Charles J. Mason, Hubert Pendergrass, Porter E. Kell, James M. Haskett.

Classified 5-A (over the age of liability) were Zebdee Jones, Robert W. Rice, Clell T. Bryant, David L. Mashburn, Charles L. Rankin, Remon T. Fouts, Clyde Moss, Lewis E. Dendy, Clarence W. Dowdle, Leroy Mason, Wayne L. Trammel, Clarence E. Miller, Ralph H. Duvall, Robert J. Angel, and Clarence H. Webb.

By S. W. MENDENHALL (County Agent)

Last year 14,000,000 pounds of milk was shipped into North Carolina from other states. This means that dairymen from other states are taking advantage of our failure to produce our own states needs. It has been necessary for our market in Asheville to have tankers of milk shipped to their plant from other sections due to the fact that there is not milk produced in this area to supply their needs. Macon County dairymen have been asked by this plant to produce more milk, particularly during the winter months, beginning the last of August. There is an opportunity now for more Grade A dairies to be constructed in Macon County. Farmers who are interested in taking advantage of this opportunity should contact the county agent's office to learn the particulars.

To produce milk profitably a dairyman must have an abundant supply of pasture, hay, silage, and grain. Macon County farmers have made wonderful strides in the development of hay and pasture. Our corn yields have been doubled. The feed crop that should receive more attention now on both dairy and beef cattle farms is silage. Any farmer wintering as many as 12 to 15 head of mature cattle, a silo will pay good dividends. The silo can be either a trench or an upright. If it is to be a trench we will be glad to lay it off so that the size will fit the herd. We are working on a plan whereby we can save you money on the construction of an upright silo. The important thing to do now is to plant an additional acreage of corn to fill a silo.

All farmers owning one or more milk cows should use artificial breeding. With the expansion of the dairy industry the demand for good dairy cattle will also increase. There is now a big demand for artificially sired heifers that are bred to freshen in the fall. Call 2706, or 97, and the artificial technician will be glad to come to your place.

North Carolina per capita brick production for 1951 soared to almost three times the national average, and far above that for all other states, according to figures contained in government reports.

## Must Meet Feed Goals, Enloe Says

One of the most urgent needs

this year, according to the chairman, is for an increase in the production of feed for livestock as a means of meeting increasing demands for meat and other livestock products.

Since grass and roughage make up more than half the feed total, and since they are key crops in conservation efforts, practices to stimulate grass and legume production are being especially stressed in the 1952 agricultural conservation program, Mr. Enloe said.

# INSULATION DOESN'T COST---IT PAYS

OVER AND OVER AGAIN

THANKS FOR YOUR PATRONAGE

Many, many homes, apartment houses, stores, churches, tourist courts, and other buildings in Western North Carolina are now enjoying the comfort of being perfectly insulated with FIBERGLAS BLOWING WOOL.

You would probably be interested to know that Fiberglas Insulation used by the Home Insulation Company is the most universally used insulation in the World today.

It is used in practically all refrigerators, ranges, water heaters, railroad refrigerator cars, aircraft, and nineteen of our leading automobile manufacturers use Fiberglas exclusively. The U. S. Government has used it in their ships for more than sixteen years.

Fiberglas insulation does not settle, burn, or absorb moisture. It is rot proof, non-conductive of electricity, and will not attract rodents, termites, or vermin of any kind.

Insurance will help to replace your home in case of fire, but insulation often saves your house from being lost by fire. It will actually cut your fire hazard as much as 70%.

These are some of the reasons, along with reasonable cost and conscientious installation that is making Fiberglas Blowing Wool so popular in Western North Carolina.

Neal Pyatt and Glenn Starnes will be working in and around Franklin during the next few days, and if you would like to know what it will cost to insulate your home, just leave your name with Mr. Walter Dean, Phone 23, at Macon County Supply Company, Main Street, Franklin, and one of them will be glad to give you the price, without obligation.

NEAL PYATT

GLENN STARNES

"Is your bedroom hot during the summer months? It shouldn't be. Do you roll and toss and perspire when you should be sleeping? That is not at all necessary. Are you about to lose your tenant because the apartment is too hot? That can be prevented. We can make your sleeping quarters delightfully cool, up to 15 degrees cooler than outside temperatures."

"Does it cost entirely too much to heat your home? Do you only heat one or two rooms and shut off the rest? Is your home drafty and cold on the floor where the children play? If so, we can be of help to you. Insulation will not only save you money but over a period of time, it will make you money. If we should fail to ring your door bell be sure to call Walter Dean and leave your name because we do want to give you a price on insulating your home."

## SHE'S THE SAFEST LADY ON THE ROAD

With Chrysler **POWER STEERING** plus Chrysler **POWER BRAKES**

At the wheel of a new Chrysler, you have quicker, surer control of motion than you've ever had in a car. You can't imagine what it's like till you drive it! With this full-time power steering, hydraulic power does 4/5 the steering work at your gentle pull on the wheel! You also turn the wheel 1/3 less distance. And on rough roads, soft shoulders, snow or sand, "wheel fight" just doesn't happen. Your hand actually has five times the usual steering control, through every minute of every mile... with the same sure "wheel feel" at all times!

With this safer way to steer, power brakes make stops at all speeds safer and easier, too. Power from the engine "boosts" every touch of your toe. Actually you stop with up to 2/3 less foot pressure than non-power brakes. You can bring your Chrysler to a halt from full speeds in many feet less distance than other cars of comparable size can stop. See your Chrysler dealer soon. Feel for yourself why thousands of owners say Chrysler offers the two greatest advances in many years in driving safety and driving ease!
