

### West Enders Take Care of Kiwanis.

#### Women of the Community Provide a Model Dinner for the Bunch.

The Kiwanis Club held its weekly Wednesday meeting at the school house at West End where the women of the community provided one of the best dinner layouts that has been encountered in a long time. The gang that went so far to be fed did ample justice and by their enthusiasm in disposing of it showed their appreciation.

During the hour Superintendent Cameron of the county schools took occasion to remark that there was no foundation for the statement that the high schools at Farm Life or at Hemp had been discredited, for both these schools are still on the accredited list, and boys and girls may attend them with the full assurance that they will have credit for all the work done at either institution. Some changes have been made that do not affect the credit for work done, but that is all, and it in no way lessens the value of training secured there.

Edwin McKeithen brought up the proposition of planting more grass seed around Sandhill homes, and Talbot Johnson suggested likewise that while grass seed was in mind that it would be wise to plant grass seed along the highways where trees have been planted. Arrangements will be made to procure grass seed at a price that can be offered folks who want to engage in this line at low price, and the prices and location of the places will be made known later. Much interest was shown in increasing the grass coverage along roads and on lawns and open places in the Sandhills, and it is likely that this movement will be given a big lift by the club. Persons interested can procure information from Talbot Johnson, Frank Buchan, Philip Rounseville, or most any other member of the Kiwanis Club, and all are urged by the club to help get the whole Sandhills country covered with grass that will be green in summer and winter. Information and instruction will be forthcoming from the club at any time.

A considerable delegation will go to the next State meeting of clubs at Winston-Salem with the hope that the rest of the State may get better acquainted with the Sandhills membership and other attractions down this way, and Pete Pepper has proposed that the double road be exhibited at the Winston-Salem meeting, and some other fellows proposed other outstanding features, so that it is probable the tobacco town will hear of this part of the State.

#### SANDHILL FARM LIFE SCHOOL.

The Sandhill Farm Life School known over Moore County and elsewhere for its constructive work will open September 10th.

This is an accredited high school in the central part of the county. There is no railroad connection to this school but it is located on a sand clay road near Carthage-Pinehurst highway.

The burning of the girls' dormitory last winter was a great loss as this was the largest and best building, but by using the McConnell hospital building as a girls' dormitory and dining hall there is plenty of room to carry on the school work successfully.

True there will not be the wide, lovely space for the girls as in the dormitory but worthwhile girls and boys who go to school for the purpose of doing real work will find satisfactory accommodations at Farm Life School. Board can be secured for \$15 per month and substantial food is provided.

There are cottages on the school grounds for rent cheaply to clubs or families.

This school offers a full course in high school work, enabling pupils to acquire an accredited high school education at a moderate cost. An efficient and thoroughly trained faculty has been secured as follows: First grade, Miss Georgia Wilson; Second grade, Miss Mabel Potts; third and 4th grades, Miss Marion Shields; fifth and sixth grades, Mrs. Donald J. Blue; seventh grade, Miss Mary Ann Black; high school principle and math, J. P. Kiser; History and French, Miss Ola King Cowing; English and civics, Miss Carpenter.

It is the desire of the community that the faculty will have the support

of both students and parents, thus making a good year in spite of difficulties and loss by fire.

#### NO SCRUB BULLS IN GASTON COUNTY.

Gaston county is well on the way to be free of scrub dairy bulls and these are being replaced rapidly with valuable purebred stock.

"A committee of leading dairymen, supported by the bankers of the county, are behind County Agent L. B. Altman in this wise movement," says John A. Arey, dairy extension specialist at State College. "With some help from the college, Mr. Altman and his committee conducted a drive in the county during the week of July 16. On July 20 a big sale was held. It took two days to haul in the scrub animals consigned and 22 were finally brought to Gastonia where they were sold to a sausage manufacturer from outside of the county for \$6.32 a hundred pounds. On the same day 25 purebred bulls were sold to farmers attending the sale."

But the movement did not end on this day, states Mr. Arey. On August 7, County Agent Altman reported that 12 more purebred animals had been placed and 11 more scrubs had gone to the sausage maker. This makes a total of 37 purebreds placed and 33 scrubs eliminated. Mr. Altman also wrote that he had several pledges for the further replacement of scrubs with blooded animals.

Mr. Arey states that excellent work in this movement was done by local dairymen, who helped to locate all the scrubs in the county. A census was taken by communities and when the final campaign was put on, these dairymen took the lead in encouraging others to dispose of their scrubs and replace them with purebreds. The banks, too, lent substantial aid. The cost incident to hauling in the scrubs was paid by the banks and they gave further support by running large advertisements in the local papers showing the value of having purebred sires in the dairy herd.

The success of the Gaston campaign attracted the attention of other counties and Mr. Arey states that a similar campaign will begin in Cleveland this week.

#### COPPER DEMAND INCREASING.

An element that is fast bringing copper to the industrial forefront is the tremendously accelerated European demand. Net imports by the primary consumers of copper outside of the United States during the first quarter of 1928 were almost 40 per cent higher than during the same period last year. And while figures are not yet available for the second quarter it is known that exports were unusually great.

The producers of copper, lead and zinc have been solving many of their problems by competent, economical management and scientific production methods. The result is that the metal mining industry in many of our great states is being placed on the most substantial basis in its history, with ensuing benefit to the workman, the investor and the public.

#### NORTH CAROLINA WEEKLY INDUSTRIAL REVIEW.

Individual Reward For Individual Merit Is The Policy That Has Made The United States The Most Progressive And Prosperous Nation In The World's History.

Raleigh—Contracts let recently for more than \$2,250,000 road work on 25 projects.

Cherryville—E. B. Scruggs erecting new building here.

Raleigh—New road will be constructed to Carolina Beach.

Windsor—Work will be started soon paving Williamston-Windsor road.

Washington—New two-story building being constructed on Market Street.

Lumberton—New electric fire siren installed on Fourth Street.

Hamlet—Telephone Co. removing wires and poles from Main and Raleigh streets and laying underground cables.

Hamlet—Carload grapes shipped from here on recent day to Pittsburgh market.

Hamlet—Bids opened for modern quarters with up-to-date equipment for local post office.

Lumberton—Paving State Highway 201 from here to Dublin advocated.

Belhaven—Remodelment of office of Interstate Co-operation Company here completed.

Raleigh—More than 20,000,000 gal-

lons of gasoline were used in North Carolina during July.

Charlotte—Establishment of air mail line between Chicago and this city sought.

Aulander—Road from this place to Ahsokie will be hardsurfaced.

Goldsboro—Local postal receipts for July totaled \$5,328, compared to \$4,792 for same month last year.

Raleigh—Furniture factories of North Carolina increased output during 1927 by more than 5 per cent.

High Point—Highway No. 10 will be routed through this city via Lexington Avenue.

High Point—Knox Upholstery Co. plans erection of new plant.

High Point—Last concrete poured on Yadkin River bridge on Highway 90.

Salisbury—Carolina Footwear Company, Salisbury, capitalized at \$25,000 chartered.

Bay View—Improvements made to road here.

Smithfield—Tax rate here this year will be reduced three cents per \$100.

Charlotte—Plans discussed for completion of Beatty's Ford road.

Clingman—Farmers in this section busy priming and curing tobacco.

North Wilkesboro—Building formerly occupied by Miller-Long Company being remodeled into modern theatre building.

New Bern—9.3 miles of Route 10 in Craven county will be hardsurfaced.

Washington—Frigidaire water cooling fountain installed in Talley and Baugham Store on Main Street.

Bessemer City—Horsley Drug Company, Bessemer City, capitalized at \$25,000 chartered.

Fair Bluff—Asphalt surface being placed on State Highway Route No. 202 here.

Fair Bluff—New high school building under construction in this place.

Fair Bluff—Floyd & Campbell enlarging Main Street garage.

Lumberton—Mansfield cotton mills in operation.

Lumberton—\$10,000 new Baptist church in East Lumberton nearly completed.

Lexington—J. T. Hedrick will build modern two-story brick store block.

Lexington—Holly Grove road towards Asheville now under construction.

#### LOCK UP THE REPEATING CRIMINALS.

Recently three robbers attempted to hold up a branch of an important bank in a northern California city. During the robbery one of them shot and killed a teller who did not obey orders with sufficient alacrity to satisfy the thug.

Fortunately the three were captured when the car in which they were escaping crashed into a truck. And the fact appeared that all of them were old offenders with continuous records for felonies in Pacific Coast cities.

The record of the killer embraced an eight year sentence for robbery, an escape from prison and identification for a previous bank holdup. He was also wanted for robbery in Los Angeles.

The second member of the trio had to his credit conviction for assault with a deadly weapon, an arrest as a bank robbery suspect, and an escape from authorities while being taken to answer for the charge.

The third thug, not to be outdone, had demonstrated his ability by an arrest for attempted burglary, a sentence on another blurglary charge, an arrest for robbery, and another arrest.

Laws similar to the Baumes Laws in New York State would mean life imprisonment for confirmed criminals of this type, upon fourth conviction for a felony. They could not be turned loose, time after time, on a helpless public. Anti-pistol legislation, which would prohibit the law-abiding citizen from owning a gun on the theory that such measures would tend to prevent crime, would in no way deter this type of law-breakers from dealing death and destruction while perpetrating their unlawful acts. Let us tighten up the laws affecting criminals rather than those affecting the home owner or lover of sports.

#### AMERICAN INVESTOR BUILDS INDUSTRY.

More than 2,000,000 stockholders have invested \$26,000,000,000 in the public utilities of our country, exclusive of steam railroads. Of this amount, the largest single branch is the combined electric light and power

and gas companies, with an investment of \$12,500,000,000. Next comes \$6,000,000,000 invested in electric railways, \$3,800,000,000 in telephone and telegraph companies and \$3,500,000,000 in water supply facilities.

It is estimated that the \$9,500,000,000 now invested in the electric power and light industry will have increased to \$12,500,000,000 at the end of the next five years.

"There are many reasons why one may expect such a large increase in capital invested in electric power and light during the next five years," says Bonbright & Co., who made a recent review of the situation. "Most important is that more than one-third of the population of the United States still lives in unwired homes. In addition, more than 90 per cent of the farms are not yet served by power and light companies.

"The advent of radio broadcasting, and of the radio with an electric socket, has opened a new field of consumption. There will also be more homes equipped with electrical devices. At present less than one-half of the homes wired for electricity have other domestic appliances than a flatiron.

"Great steps will be made in electrification of railroads. Only about one per cent of our total railroad mileage is now electrified. Lastly, industry will require more power from electric power and light companies. At present only half the industrial requirements are supplied by these companies."

#### NO UNIVERSAL INSURANCE PANACEA

"The insurance business is indebted to Commissioner Monk, of Massachusetts, for bringing more closely to public attention the growing evils of presenting fraudulent claims under the compulsory liability law of that state, as he has done in interviews printed in a Boston newspaper," says the Standard of Boston.

"The information divulged is nothing new to the claim departments of the liability companies, but it will be accepted with more importance by the general public as coming from the insurance department rather than the companies.

"We have in mind one case where an insured came into an insurance office to renew his insurance and in the same office at the same time was a lawyer, a stranger to the assured, who was presenting a claim for personal injuries to the assured, who had had no accident and had never seen the lawyer before. . . . Yet when the companies attempt to resist such claims and take them to court the cry arises that the companies are attempting to cheat injured parties out of their rights. . . .

"As the Commissioner aptly points out, these faked and padded claims increase the cost of insurance and result in higher premiums, counteracting the benefits which might come from the natural decrease in accidents through more careful driving. The companies lose, the average motor vehicle owner loses, and even the fake claimant gets but a small part of the award, if the award is paid, for the 'ambulance chasing lawyer' and his 'runner' figure to collect from 50 to 75 per cent of the amount secured and in some cases all."

The predicted evils of this compulsory insurance appear in practice. And these, on top of the fact that it fails to secure results compatible with its expense and burden, indicate that

it is not the universal panacea claimed by its advocates.

One farmer in Surry county has solved the feeding problem. He sowed four acres of lespedeza and red top last spring and is now grazing ten sows, two mules and four cows on this field.

Enterprising farmers in Eastern Carolina are now hogging down corn in the dough stage and getting their animals ready for the high market.

One farmer of Halifax county who fed 14 hogs according to the Shay method last year now has 108 animals on feed for the September market.

The second herd improvement association has been organized in Eastern Carolina with 22 dairymen owning 625 cows as members. This is the eighth such organization in the State.

Over 500 farmers of Catawba county attended the recent county picnic on the farm of R. L. Shuford near Newton.

When Knollwood built the dam on the Manley road near McDeed's Creek it was not with the expectation of providing a fishing area. But as always, man proposes the gods dispose. When the floods came recently it was decided to open the sluice way of the new dam and let the surplus water go through to ensure the safety of the dam. The floods poured through and dug out a big deep hole on the lower side of the road, and when the high water went down a beautiful lake was there cut deep into the sand. Now the flood also cut a pretty channel out into the main creek, and that creek has been pretty well filled with little bass from the plants that have been made in the other sections of the creek. With the high water reaching up to the Knollwood dam little bass poured into the hole below the dam in enormous quantities. With the receding of the waters that which was held in the sandy basin below the dam seeped down into the sand and there was a pool of fish that would make your hair curl. With the water falling lower and lower in the sand Mr. Maze saw that the fish were in for a hot dry fall if something could not be done for them so he called his crew and they brought buckets and they filled bucket after bucket with littles fishes and carried them up to the deep water in the dam, and several bushels of young bass were put in the new lake. When those fish grow up in proper time that lake will be so full of fish that it will be like taking pennies from the contribution box to go there and fish.

With the receding of the waters that which was held in the sandy basin below the dam seeped down into the sand and there was a pool of fish that would make your hair curl. With the water falling lower and lower in the sand Mr. Maze saw that the fish were in for a hot dry fall if something could not be done for them so he called his crew and they brought buckets and they filled bucket after bucket with littles fishes and carried them up to the deep water in the dam, and several bushels of young bass were put in the new lake. When those fish grow up in proper time that lake will be so full of fish that it will be like taking pennies from the contribution box to go there and fish.

When Knollwood built the dam on the Manley road near McDeed's Creek it was not with the expectation of providing a fishing area. But as always, man proposes the gods dispose. When the floods came recently it was decided to open the sluice way of the new dam and let the surplus water go through to ensure the safety of the dam. The floods poured through and dug out a big deep hole on the lower side of the road, and when the high water went down a beautiful lake was there cut deep into the sand. Now the flood also cut a pretty channel out into the main creek, and that creek has been pretty well filled with little bass from the plants that have been made in the other sections of the creek. With the high water reaching up to the Knollwood dam little bass poured into the hole below the dam in enormous quantities. With the receding of the waters that which was held in the sandy basin below the dam seeped down into the sand and there was a pool of fish that would make your hair curl.
