EFFECTIVE SEPT. 3
Reminder Issued On Changes In Fair Labor Law
 Employers in this area were reminded today of provisions of the Fair Labor Standards Act, effective September 3.
 As of September 3, employees whose work was brought under the Act's coverage by the 1961 amendments are entitled to a minimum wage of \$1.15 an hour, instead of \$1 an hour. The maximum workweek, after which they must be paid at the rate of one and one-half times their regular rate of pay on September 3, is 42 hours a week, replacing the 44-hour workweek.
 Employees whose work was covered by the Act prior to 1961 continue to be subject to a minimum wage of \$1.25 an hour and overtime pay after 40 hours a week.
 Employers and workers are reminded of another provision of the law which became effective last June. The Equal Pay Act of 1963, which amended the Fair Labor Standards Act, prohibits wage discrimination on the basis of sex. It applies to employers and employees who are subject to the minimum wage provisions of the Fair Labor Standards Act.
 Additional information is available from the U. S. Labor Department's Wage and Hour and Public Contracts Division. The nearest office is located at Room 203 Lawyers Building, 320 South Salisbury Street, Raleigh, Telephone 833-1634.

ENGINEER HEADS PROGRAM
Mechanical Technology Training Now Available At Lee Industrial Center
 The Lee County Industrial Education Center at Sanford is one of several institutions established by the State of North Carolina to provide training in Mechanical Technology. A comprehensive program of instruction is offered in the sciences, technical fields and related areas to prepare graduates for employment in the field.
 The type of education given is designed to enable graduates to become productive immediately upon entering industry. It is expected that only a minimum of on-the-job training will be necessary to make them useful to employers. Students are prepared for technician jobs by courses in applied science, applied mathematics, and applied engineering, with subject matter related to the practical problems students will face on the job.
Technician, Not Craftsman
 Students are also taught basic skills in the use of instruments, machinery and tools. This training, however, is designed to familiarize the student with equipment, rather than to develop manual skill. In contrast with the skilled craftsman whose job depends primarily upon manipulative ability, a technician often uses instruments and machinery merely as an aid in applying his scientific knowledge to a particular problem.
 The program in Mechanical Technology is actually composed of two courses: Industrial Technology, which deals with production methods, material handling, general production efficiency, and time and motion study; and Manufacturing Engineering, which entails tooling, process, tool design, inspection and production planning. While engaged in the program, the student will learn the functions and capabilities of modern machine tools, and the latest manufacturing technique, by actual practice on supervised projects.
 Upon completing either of the two courses in the program, the student will be qualified to enter the industrial field as an industrial technician, or a junior manufacturing engineer.
Skeldon Heads Program
 The Mechanical Technology program is headed by William Skeldon, a manufacturing engineer with over 20 years in indus-

try, in the Toledo-Detroit Area. His background has been in the aircraft, automotive, and machine tool fields, and includes tooling and computer program work for numerical control machine tools.
 Earnings in either field of Mechanical Technology are very much above average, says the announcement of the course. Starting salaries range from \$350 to \$400 per month. As ability increases with experience, the status of industrial engineer, or

or senior manufacturing engineer is reached; either of these classifications will have a salary scale of \$600 to \$700 per month and from either of these positions, the door is open to the consulting

or executive field. The requirements for entry to the Mechanical Technology program are graduation from high school, preferably after a science-mathematics emphasis. Testing is

provided for those who do not meet the formal requirements, and preliminary courses are offered to prepare the candidate for entry to the mechanical technology curriculum.
