Office in B. R. Hood & Co. Drug Store.  
Watches, Clocks and Jewelry neatly and  
promptly repaired. All work done in a  
workmanlike manner and warranted.  
Highest prices paid for old gold, etc. A  
liberal share of the public patronage res-  
pectfully solicited.

**The Empire City Mill**  
PATENTED JUNE 22, 1882—  
JULY 14, 1885.

The best mill in the market for general use;  
grinds all kinds of grain; will grind coarse  
corn to good feed; will make good family  
meal; will grind plaster, calcined shells, to-  
bacco stalks and stems to a fine pulverization.  
Everybody should have one; you would be  
pleased with it. These mills are made in two  
sizes; price on board at New York \$75.00 and  
\$50.00. Write for circulars and particulars.  
A. D. JOHNSON, Agent,  
Rome, Johnston County, N. C.

## FOR THE HERALD.

### An Encomium to the Moon

By MAMIE H.  
Peeping through the tower ring pines,  
In the twilight gray;  
Sending forth the silvery lines,  
That around me play.  
World of beauty! thou art good,  
That to shine on me;  
If I could, I ever would  
Dream sweet dreams of thee.  
All thy sweetness let me feel,—  
That is why I came;  
For in anguish, or in weal,  
Thou art still the same.  
Rising o'er the eastern hills,  
Sent ering gems of love  
On the mountains by the rills,—  
Magnet from above!  
O how can I sleep to-night,  
Close my eyes on thee!  
While thy soft and gentle light  
Brings such bliss to me.  
May my soul forever rise  
O'er the dark of life,  
As thou art in summer skies,  
Far from sin and strife.  
Forest Home, N. C., August 27, 1886.

### Obituary.

#### BRYANT RUFFIN HINNANT.

In the death of Bryant R. Hinnant, which occurred at his residence, on the first day of September, 1886, Johnston county loses one of her best and most useful citizens. He was born in Johnston county on the 5th day of January, 1836, and was therefore in the 71st year of his age.  
He was twice happily married, and was the father of sixteen children—nine of whom preceded him in entering the silent tomb. He leaves a widow and seven children to mourn his death—four of whom now live in South Carolina. The writer was frequently at the home of the deceased, and enjoyed his generous hospitality and social entertainment; and though a man of limited means, he lived well and all about him seemed to be happy and contented. It may truly be said of him, that he was a true friend and neighbor, an affectionate and gentle father, and a devoted and loving husband.  
The deceased was confined to his bed 22nd of May, 1885, and was able to leave his room, but a few times afterward. His disease was pronounced Bright's disease of the kidneys. His sufferings were immense, but he endured them patiently, and seemed to want to give his family and attendants as little concern and uneasiness as possible; and when the fatal hour came he seemed to be resigned to death, but regretted leaving his family, and his children scattered as they are.

The deceased was a man of pure motives, strong common sense, and a goodly store of useful and practical information. Hence he filled many important trusts at the hands of the people. He served a number of years as Sheriff of the county. Also quite a number of years as chairman of the court of Pleas and Quarter sessions. He represented Johnston county in the Legislatures of 1864-'67 and of 1868-'69, and in all the charges of corruption against the latter Legislature, not one can be laid at the door of B. R. Hinnant. He was one of the few that emerged from the same with clean hands. He was also a member of the Constitutional Convention of 1875, from Johnston county. He served as Commissioner of Deeds for the State of Tennessee from 1874 to the time of his death. He has served as a Justice of the Peace of Johnston county for over 40 years, and of him it has been frequently remarked—that he was the best J. P. in the county. And in all his official relations he stands without spot or blemish, and has proved true and faithful to every trust confided to him.

In politics the deceased was an old line Whig up to the disintegration of the party. After the war he allied himself with the Republican party, and was one of its most worthy leaders. He was always on the side of the people, and opposed all measures abridging their right and privileges, and his efforts and sympathies were ever enlisted in behalf of the weak and oppressed.  
It may also be truly said of him, that an honest man, and a true friend of the people has passed away.

Beulah, N. C., Sept. 6th, 1886.

**Wives! Mothers! Daughters!**  
BE YOUR OWN PHYSICIAN! A lady who for years suffered torments worse than death from Uterine Troubles, Frolics, Leucorrhoea, Suppressions, &c. so common among our Wives, Mothers and Daughters and had despaired of being cured, finally found remedies which completely cured her, after all else had failed. Any lady can use the remedies and cure herself, without being subject to a medical examination. From gratitude she will send FREE, Receipts. Illustrated Treatise and full directions sealed Address with stamp (Mrs. W. C. HALL, Broadway, N. Y. Name paper.

## THE CAUSE OF THE EARTH-QUAKE.

### A Review of the facts.

Henry W. Grady in the New York World.  
Let us discard the false stories to begin with. There was no cross of fire seen above the doomed city. That item was answered in Capt Dawson's boat that it was a devout Irishman who first saw it. There was no vivid streak of fire that flashed like a stroke of lightning down the length of Meeting street. There was no atmospheric disturbance whatever. The water that issued from the fissures opened by the shock was not hot as well as sulphurous. It was about the usual temperature of artesian water. The fissures did not throw water to the height of twenty or thirty feet. With these exceptions I have heard no rumor concerning the earthquake that was not true in substance, if not in detail. Now, let us review what actually did happen.

First—The original shock, taking Charleston as the centre, lasted from 17 to 20 seconds, certainly not longer than 25 seconds. The motion was a succession of sharp plunges towards the earth, with sharp and immediate recovery, the oscillations being about equal. In changing the motion from east to west, there was, perhaps, a twisting, as chimneys and lamps were wrenched half-way round after the 15 seconds of oscillation. There were subsiding tremors circulating for perhaps three minutes, nothing like the first oscillation, however, and no new impulse.

Second—The shocks have been zoned at intervals for three days longer, with none of fierce energy of the first shock. Perhaps there is no more disturbance in the later shocks than would result from an enormous mass re-adjusting itself after sudden dislocation. Prof. McGee held that such was the case with the later shocks reported to him at Charleston. He said, however, if the new shocks at Summerville were as violent as reported they would be inexplicable by the theory of settling or readjustment of the earth, and would indicate new disturbances. Mr McGee has just wired that he considers the later shocks at Summerville simply the dying out tremors of the first displacement.

Third—The earthquake was accompanied by a dull, roaring noise which outlasted the first shock by a half-hour and returned with every subsequent tremor. The roaring is under ground and best described as long rolls of thunder, deadened. In the cities it is mingled with the rattle of glass and the rumble of rocking houses. In the country it is heard as plainly as a cannonade or thunder. It has never been so loud as with the first shock, but has been heard with every tremor. Listeners declare that it has none of the sharp, grinding sound of rough friction, but rather the dull, mellow sound of air or steam thundering in cavities.

Fourth—The fissures in the ground are of irregular shape. Usually they discharge a blackish water and fine sand, or water and blue mud, but not always. The discharging fissures are usually rounded or oblong, varying in size from a cup to a well, and always swollen for several feet around as if the earth had been pushed up from below. A gentle swell of white sand, perhaps a foot high, in the centre, glistening with moisture and rowed just above the crater with a pile of blue mud shaped like a beehive—that is the usual appearance of the mound fissure. The water flows regularly from the base of the blue mud and jets of mud are pushed up at intervals. Wells have filled to the tops and are overflowing freely. Everywhere there appears to have been a bulging from beneath the ground that lifted it up and forced the water and mud to the surface. The water did not follow the shock instantly, but came perhaps a half hour later. In an area of ten minutes in every direction from Summerville, holes and fissures are as burrows in a prairie-dog village. New ones are opening continually. The bottom has been relevelled in none of them. In Charleston there are many flowing fissures, though they show less plainly in the paved streets.

Fifth—Prof. McGee's theory of the earthquake is generally accepted. Plainly stated it is that the Appalachian mountains are two great formations, the granite and the fragmental. The first extends from the mountains to about Columbia, and the latter from Columbia to the sea. The first is the piedmont escarpment and the other the coastal plain. The escarpment is granite, the plain is made up of composite rocks and fragments resting on a granite bed about 3,000 feet below. The granite bed that holds this mass of earth is inclined towards the sea, and about 100 miles from shore it deepens suddenly. The tendency of the fragmental plain is to slide down the granite plain on which it rests. This tendency is increased by the deposits of sand and gravel constantly brought into the fragmental mass by the rivers that flow

down from the mountain. Prof. McGee holds that a seaward slip of this coastal plain has taken place, and that the disturbance results from sudden dislocation of an area 30,000 miles broad and 3,000 feet thick. His reasons for believing this are that such a seaward movement has been taking place steadily in the Middle Atlantic States and its progress has been accurately noted; that no volcanic action ever disturbed anything like so great an area or could possibly do so; that the so-called volcanic mud and sulphurous water are simply marls and salts or sulphates released from the layers of the earth by the tearing motion and forced upward through suddenly made rifts; that all the phenomena of this earthquake are explicable by the theory of the land-slide, but not by the volcanic theory, and that no volcanic force having operated on this continent in thousands of years, and none being apparent now, volcanic force cannot be taken as the cause.

### Volcanoes.

As there will be some writing done on earthquakes. We will talk a little about volcanoes. We will talk a little about volcanoes. The best known volcano in the world is Vesuvius which is in Italy, near the city of Naples. This was not known to be a volcano until A. D. 79, over eighteen hundred years ago, when it suddenly burst forth and sent out such an immense quantity of ashes and cinders as to overwhelm two great cities situated near it. These cities were named Herculaneum and Pompeii. Almost all their inhabitants managed to escape. The ashes that fell upon Herculaneum were mixed with steam. So that moist ashes gradually hardened into stone.

Pompeii was covered over with dry ashes so completely that nothing could be seen of it. Thus it remained buried until 1743 when it was suddenly discovered. About one-third of the city has been uncovered, and you can now walk along the streets and look into the houses and see exactly how people lived in those days. Most of the volcanoes are along the Pacific coast of Asia and South America. There are more than a thousand volcanoes in the world. In 1783 a volcano in Iceland sent out two streams of lava, one 40 miles long and 7 miles wide, and the other 50 miles long and 15 miles wide. These streams were from 100 to 600 feet deep. In this eruption 11,000 cows, 27,000 horses and 186,000 sheep perished. In the Island of Java is a volcano, which in 1772, threw out ashes and cinders so as to cover the earth fifty feet deep for a distance of seven miles all around the mountain, thus destroying forty villages and twenty thousand people.

Sometimes volcanoes rise from the sea. This happened in 1866, near the navigators Island in the Pacific. Stones, mud, and dust were thrown up 2,000 feet, some of the stones going down not others coming up with a terrific crash, for a great way around, the water was in terrible commotion. Heaps of dead fish were washed ashore. While the atmosphere for miles around was heated and filled with smoke, ashes and sulphurous vapors.

### Resolution of Condolence.

At a regular meeting of the Glenwood Literary Society, Friday night Aug. 27th 1886, the following Resolutions of condolence were unanimously adopted:  
Recognizing the fact that wherever the sable messenger, death, makes his visits he leaves shadows of sorrow and bereavement; and that he has recently visited this vicinity and taken from our midst Miss Hattie, daughter of Mrs. M. A. Underwood, who departed this life August 26th, 1886, therefore

That we do profoundly regret and deplore this sad event, and that the bereaved relatives and friends of the departed lady, have the sincere sympathy and condolence of this body. Resolved further, That a copy of these resolutions be forwarded to the family of Mrs. Underwood; and that the same be sent to the Smithfield HERALD with a request to publish.

D. L. ELLIS, President.  
R. D. KENNEDY, Secretary,  
Goldboro Messenger and Clinton Courier.

**Money for Loan.**  
We have made arrangements to procure loans for two years or more from \$250 to any amount desired, on land in Johnston county, on reasonable terms. Apply when you wish to be accommodated.  
Pou & Massey.

**WE HAVE TRIED IT.**  
"And would have it if the cost was ten times what it is," says many ladies who have used The Mother's Friend before confinement. Write The Bradford-Regulator Co., Atlanta, Ga., for full particulars.

## EDUCATIONAL.

### IRA T. TURLINGTON, Editor.

#### JOHNSTON COUNTY TEACHERS INSTITUTE.

**Colored Teachers.**  
The colored Teachers' Institute for this county will begin at Smithfield Sept. 20th 1886 and continue two weeks.  
It will be held in the colored school house.  
I have secured the services of two very prominent colored teachers to aid in this work:  
**INSTRUCTORS:**  
A. B. Vincent and S. N. Vass, Shaw University, Raleigh, N. C.  
The instructions given will be practical and applicable to our public schools.  
Now teachers, one and all, I earnestly request that you attend this institute the whole time.  
I think it not out of place to remind you of what the School Law says about your attending county institutes.  
Sec. 2567 of 15th Chapter of the Code says:  
The public school teachers of the county (in which the institute is held) are required to attend the teachers' institute.  
The County Board of Education of this county passed the following:  
The Superintendent of Public Instruction shall conduct his examinations upon the basis of the instructions usually given in a well conducted and well arranged teachers' institute.  
The teachers can get board cheap in the town.

### IRA T. TURLINGTON, Co. Sup't Public Instruction.

**What can be Done.**  
By trying again and keeping up courage many things seemingly impossible may be attained. Hundreds of hopeless cases of Kidney and Liver Complaint have been cured by Electric Bitters, after everything else had been tried in vain. So don't think there is no cure for you, but try Electric Bitters. There is no medicine so safe, so pure, and so perfect a Blood Purifier, Electric Bitters will cure Dyspepsia, Diabetes and all Diseases of the Kidneys, Invaluable in affections of Stomach and Liver, and overcome all Urinary Difficulties.  
Large Bottles only 50 cents at T. R. Hood & Co's.

### Swapping Wives.

(Chatham Record.)  
A white man was sent to jail at Moore court last week for having swapped wives with another man. Did you ever hear of such a case before? When Judge Gilmer asked him what he had to say why sentence should not be passed, he said that he didn't know it was any harm; that a man came to his house with a wife and bantered him for a swap, and he swapped, paying \$150 to boot; and that as it was his first swap he hoped the judge would let him off with a light sentence. The other swapper was not caught. This is an actual fact.

### THROUGH THE STATE.

**Clippings and Penchings.**  
The Durham Plant says: Near the residence of Solicitor F. N. Strudwick in Orange county stands a large locust tree. Mr. Strudwick has a flock of guineas. One of these birds flew up into the locust tree and its head unfortunately came in contact with a thorn that pierced its brain and when discovered it was lifeless, swinging with a thorn through its head.

Capt. B. P. Williamson, in a communication in the News Observer, tells how to have one acre in clover: "Take any acre or your farm, (stiff land preferred) that will produce four barrels of corn or cotton, or six hundred pounds of seed cotton. Plow and cross plow it thoroughly in September or February, harrow and cross into it 400 pounds of ammoniated guano, sow upon it fifteen pounds of red clover seed, and brush in with a stiff brush, and the work is done. The result has always been satisfactory to me."

During the delivery of his charge to the grand jury of Lenoir county Superior Court last week, Judge Clark observed the clerk whispering to a bystander and fined him \$25. He also fined two jurors \$25 each for their failure to answer when their names were called.—Ex.

Lodges of Knights of Labor have been organized in Charlotte and Greensboro recently.

The breach in the Republican party grows wider each day. In his last card Dr. Mott criticised Judge settle for lending his influence to what he is pleased to term "a rump concern." Judge settle is now out in a card defending his action and advising Dr. Mott to retire from political management. The Judge reviews his own career as a Republican says his action was only prompted by a desire to keep up the organization of the Republican party, which Mott is trying to destroy. He quotes from Mott's letter to show that Mott wants to hand over the republican party to a new combination.  
Beaufort Record: Thirty-three thousand mullets were caught at one haul at the Wade's shore fishery, in this county, one day last week. These fish met with a ready sale at \$4.25 per hundred pounds.

## LOWER JOHNSTON.

### GLENWOOD NEWS.

The great topic for discussion now is the earth-quake shocks which have disturbed us of late. Many people were greatly frightened by this unusual occurrence, and not a few are thinking seriously of becoming members of the church on account of it. One man was heard to declare that he would join the church immediately if there were a protracted meeting anywhere in progress.  
These earthquake shocks have not ceased yet; for a distinct vibration of the earth was noticed here on last Friday night, 3rd inst., at 10 o'clock. No damage so far as known, was done in this section by the "shake-up," but everybody is more or less excited and on the look out for further visitations.  
Cotton is opening rapidly in many places and farmers are beginning to gather their first bale.  
Quite a crowd of visitors came out to Glenwood, last Friday afternoon, to hear the pupils of the school in their usual exercises of declamation, recitation, compositions and singing.  
A musical entertainment for the benefit of our school Library, is now in progress. It is proposed to have this entertainment on October 29th. No doubt but this will be the event of the season, and well worthy of the patronage of everybody.  
Owing to some misunderstanding the several committees on the library work did not hand in their list of names of contributors to the Library for publication this week the entire list will appear next week.  
Several persons have given us books since the last list was published but their names cannot be obtained for publication at present.  
Miss Manic Carver of Sherwood, Cumberland Co., N. C., is again at school at Glenwood. She received a hearty welcome from all of her school-mates and friends.  
Miss Manic Barnes is at home for a week on account of sickness. We hope she may soon return to her studies, fully restored to health.

At the Glenwood society, last Friday night, in debating the question, "Resolved that the pupils affords a better field for the cultivation of talent than the bar." One of the young men on the negative struck the teachers some pretty hard blows; among others, he said that a teacher has no opponent in his work; we always thought that the classical profession had about two-thirds of the world for opponents, and old Nick thrown in for good measure. Strange how much an argument will develop among school boys.

Last Saturday, the Principal of Glenwood school paid a flying visit to Smithfield, but being on "strictly business," he had no leisure to note the many improvements now going forward in this progressive town.  
The "Correspondence Committee" has a report on out table, but too late for this issue.

The latest contribution to the Library is a sprightly pig, given by Mr. Isaac Williams. While we are a great admirer of Bacon, it is not thought best to put this volume upon our shelves in its present binding—we always preferred Bacon in Sheep or Calf. But his pig ship will come in nicely about Xmas, in the way of cash for buying books.

**A Captain's Fortunate Discovery.**  
Capt. Coleman, schr. Weymouth, plying between Atlantic City and N. Y., had been troubled with a cough so that he was unable to sleep, and was induced to try Dr. King's New Discovery for Consumption. It not only gave him instant relief, but allayed the extreme soreness in his breast. His Children were similarly affected and a single dose had the same happy effect. Dr. King's New Discovery is now the standard remedy in the Coleman household and on board the schooner.

Free Trial Bottles of this Standard Remedy at T. R. Hood & Co's Drug Store.
