## FOR THE HOUSEWIFE

**Washing Silk Shawls.**  
Many people having yarn or wool shawls (knit or crocheted) find that they stretch out of shape and present a hopelessly stringy appearance after washing.  
Lay your shawl out perfectly flat on a piece of cloth sufficiently large to cover it and baste with heavy thread several times around until held firmly in place. Cover with another piece of cheesecloth and baste this enough to hold well in place. Wash in good suds of wool soap, squeezing rather than rubbing. Rinse well, pressing out as much water as you can without wringing. Hang on line to dry. When properly dry remove covering, and you will find your shawl in perfect condition, light and fluffy and not stretched at all.—National Magazine.

**To Keep Curl in Hair.**  
Into a half pint of violet toilet water put five-eighths of a dram of carbonate of potash, a quarter dram of powdered cochineal, half a dram of ammonia water, one ounce of glycerin and three-quarters of an ounce of rectified spirits, with two drams of extract of violet. It will be best to have this prepared by a druggist, as it should stand a week before filtering. When the hair is perfectly clean apply this and roll on kids. The curl will stay in several days.

**For the Faded Carpet.**  
There are many things used for restoring color to a carpet the glory of which has departed because of age and hard usage, and one of the best of these is ox gall. One gill to a gallon of cold water is all that is needed in the most serious cases. Rub the carpet all over with this mixture, using a brush for the purpose, and rubbing until a lather is formed. Then wash off with clear water and rub as dry as possible, using soft, clean rags.

**Comfortable Crib.**  
In constructing the majority of the so-called cribs for babies the manufacturers have entirely lost sight of the

comfort of the child. Too many of them are made for appearance rather than for ease. This cannot be said of the one shown here, as it is as comfortable and ugly as it is sure to be comfortable. The inventor, an Indiana man, evidently endeavored to devise a crib that would fulfill its mission. Enough springs are provided to keep the wicker basket in motion for a long time after it has been given a start. An important although small addition is the rollers on the bottom of the frame. There is thus provided an easy method of transferring the crib from one room to another. The busy housewife only need stop occasionally in her duties to give the basket a periodical push, the springs doing the rest.

**To Bleach Yellowed White Silk.**  
When either white silk fabric or embroidery has become yellow from careless washing, it may be bleached in the following manner: Dissolve two ounces each of salt and oxalic acid in six quarts of cold water. Soak the silk in this until the yellow tinge disappears. This will take about an hour in ordinary cases. Immediately rinse in several clear waters to remove every trace of the acid.

**Bruised Fingers.**  
Hold a bruised finger in a cup of hot water for a few minutes and it will prevent further trouble. The water should be as hot as it is possible to stand it. Gatherings and runarounds can be successfully treated in the same manner.

**French Toast.**  
To one egg, well beaten, add one-half pint of sweet milk and a pinch of salt. Into this dip dry slices of bread and fry like griddle cakes in a little hot butter until nicely browned on both sides. Serve with maple syrup.

**House Plants.**  
A cheap and clean fertilizer for house plants is household ammonia in weak doses, say ten drops to a pint of water at first, increased later as the plants get used to it to a scant teaspoonful to a pint.

**Pushing Wall Paper.**  
If a patch must be applied to wall paper, let the new piece lie in strong sunlight until the colors are faded to match those on the wall; then tear the edges and the applied piece will not be so conspicuous.

**Nervous Headache.**  
For a nervous headache a fannel cloth dipped in hot water and placed first on the temples and then on the back of the head at the base of the brain is sure to give relief.

## HINTS FOR FARMERS

**Rotation of Crops.**  
On every farm there should be a regular rotation of crops, says a Vermont farmer in American Cultivator—that is, the mowing fields and tillage land should be under a regular system of cropping for best results. The length of this rotation will depend on the size of the farm, the character of the soil and the crops to be raised.  
The first year from seed the land should be devoted to the cultivated crops, such as corn, potatoes, beans, etc., that are preparatory in character. With these there should be liberal fertilization and good cultivation, which will put the land in suitable condition for a grain crop and seeding down to grass.  
The writer practices a five year rotation, one in cornfield and fodder, one in grain, oats and barley, with grass seeding, and three in grass. In this way get excellent crops of good hay during this time.

**Keep the Pigs Thriving.**  
Successful pig raising in cold weather requires warm, dry quarters, with skim milk and some grain. With these the business can be made both successful and profitable. It is not best to undertake to keep more than can be well fed and cared for, for excellence in quality is superior to mere numbers. Feed regularly and only what will be eaten up clean, for an overfed pig will not do as well, neither will any other animal. After two months old the pigs can safely be fed a little grain, increasing gradually the amount with age and growth, endeavoring to keep them in a growing and fattening condition.

Supply plenty of bedding, which is necessary for their comfort and of advantage to the owner in the large amount of excellent manure that can be made by these busy workers.—American Cultivator.

**Bees on the Farm.**  
While I would not advise any one to take up beekeeping unless he has a natural ability for it, I cannot help but think that many of our young men might do so to a good advantage, writes a New York farmer in American Agriculturist. I don't expect every one that takes it up will be as successful as some have been, but I am sure a large per cent of our farmers might keep a few colonies very profitably. If some would give their sons a little more encouragement to take up something of this kind it would many times be much better for both father and son. The first expense is small, and if it should be the means of keeping the boy on the farm it might be a blessing in disguise.

**Horse and Cow Hay.**  
Timothy sells for a higher price in the market than other hay and is regarded as being particularly adapted to horses. It is deficient in protein and for that reason should be fed with a grain ration of a nitrogenous nature. For horses no better basis for a ration can be found than timothy hay and oats. It is less valuable for cattle and sheep. Clover hay is next to timothy in common use, and the two are more often found mixed than either is found alone. The nitrogenous nature of the clover side in supplying the deficiency of protein in the timothy. Clover is more valuable than timothy for cattle and sheep, but is not considered so satisfactory for horses.

**Fattening Waterfowl.**  
In feeding waterfowl for market purposes mixed or mash food should be provided. Whole corn or grain of any kind is a wasteful kind of food to use in fattening waterfowl. The waterfowl do not have a crop and gizzard connection, as do chickens. Mash or mixed foods are much more easily consumed, digested and assimilated by waterfowl than whole corn. Quite often ducks, both young and old, more especially young ducks, are destroyed from eating too much whole corn. This happens when they have had a surfeit of young, undried corn. It quickly swells in the crop and oftentimes does great injury to the ducks.—Feather.

**Pork Packed in Brine.**  
Rub each piece of meat with fine common salt and pack closely in a barrel. Let stand overnight. The next day weigh out ten pounds of salt and two ounces of saltpeter to each 100 pounds of meat and dissolve in four gallons of boiling water. Pour this brine over the meat when cold and cover and weight down the meat to keep it under the brine. Meat will pack best if cut in pieces about six inches square. The pork should be kept in the brine till used.—Nebraska Independent.

**Fig Notes.**  
Suckling sows require extra good feeding with some succulent foods, slops, etc., or they lose flesh rapidly and go down below normal condition.  
Brood sows three to six years old grow the strongest and best pigs, which have more vitality to resist disease germs.  
All waste from the kitchen is wholesome and suitable as food for pigs, but a swill barrel that is never empty is a bad thing to have around.

**Storing Seed Corn.**  
It is unwise to store seed corn in barrels or boxes, as it will gather moisture even though it appears to be thoroughly dry. This is especially true during the fall and winter months.  
Cold does not injure the vitality of corn when it is thoroughly dried and kept dry, but on the other hand, if allowed to gather moisture freezing will reduce the vitality and may destroy it entirely.—Professor J. G. Holden, Iowa Experiment Station.

## FOR THE CHILDREN

**About Persian Powder.**  
Young readers
