

DYSPEPSIA

"Having taken your wonderful 'Cascares' for three months and being entirely cured of stomach catarrh and dyspepsia, I think a word of praise is due to 'Cascares' for their wonderful composition. I have taken numerous other so-called remedies but without avail, and I find that Cascares relieve more in a year than all the others I have taken would in a year."

James McGune,
108 Mercer St., Jersey City, N. J.

TAKE A DOSE OF **PISO'S** THE BEST MEDICINE FOR COUGHS & COLDS

Many men enjoy a dry smoke. Why not a dry drink?

Garfield Tea purifies the blood and eradicates rheumatism. It is made of Herbs.

Perhaps Mohammed went to the mountain because it was cheaper than spending his vacation at the seashore.

FOR HEADACHE—Sticks' CAPSIDINE
Whether from Colds, Heat, Stomach or Nervous Troubles, Capsidine will relieve you. It's liquid pleasant to take—acts immediately. Try it. 10c., 25c., and 50 cents at drug stores.

In Brooklyn a few weeks ago a Sunday school teacher asked his class of hopefuls this rather debatable question: "Who will tell me what is the chief end of man?"

From the most attentive pupil came forthwith this answer: "To glorify God and annoy him forever."

Not for Mortal Understanding.

What fond mother has not, at some time, said: "My child, you are much too young to ever understand; you will find out when you get older—all you wish to know will be explained." And how many of us are still waiting for the reason, for some one to explain—are we still too young? Perhaps we are, and again, perhaps we are not—perhaps it never shall be explained to us; there are things wrapped in voiceless mystery.

How Pat Proved It.

An Irishman was once serving in a regiment in India. Not liking the climate, Pat tried to evolve a trick by which he could get home. Accordingly he went to the doctor and told him his eyesight was bad. The doctor looked at him for a while and then said:

"How can you prove to me that your eyesight is bad?"

Pat looked about the room and at last said: "Well, doctor, do ye see that nail on the wall?"

"Yes," replied the doctor.

"Well, then," replied Pat, "I can't!"

—Chicago Tribune.

HEREDITY Can Be Overcome in Cases.

The influence of heredity cannot, of course, be successfully disputed, but it can be minimized or entirely overcome in some cases by correct food and drink. A Conn. lady says:

"For years while I was a coffee drinker I suffered from bilious attacks of great severity, from which I used to emerge as white as a ghost and very weak. Our family physician gave me various prescriptions for improving the digestion and stimulating the liver, which I tried faithfully but without perceptible result.

"He was acquainted with my family history for several generations back, and once when I visited him he said: 'If you have inherited one of those torpid livers you may always suffer more or less from its inaction. We can't dodge our inheritance, you know.'

"I was not so strong a believer in heredity as he was, however, and, beginning to think for myself, I concluded to stop drinking coffee, and see what effect that would have. I feared it would be a severe trial to give it up, but when I took Postum and had it well made, it completely filled my need for a hot beverage and I grew very fond of it.

"I have used Postum for three years, using no medicine. During all that time I have had absolutely none of the bilious attacks that I used to suffer from, and I have been entirely free from the pain and debilitating effects that used to result from them.

"The change is surely very great, and I am compelled to give Postum the exclusive credit for it." Name given by Postum Co., Battle Creek, Mich.

Read "The Road to Wellville," in pks. "There's a Reason."

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

VALUE OF BEET PULP

Compares Favorably With Bran as Food for Cows.

Mixed With Refuse Molasses It Enhances In Worth For Feeding Purposes—Should Be Fed in Large Quantities.

(By C. H. ALVORD, Professor of Agriculture, A. and M. College of Texas.)

Dried beet pulp compares favorably with wheat bran as a food for dairy cows. Experiments seem to indicate that its feeding value is about two-thirds that of the bran. It should not be considered a grain, as it contains 17 per cent. of crude fiber while wheat bran contains only 9 per cent. of crude fiber and corn chops 1.9 per cent. The New Jersey experiment station fed dried beet pulp nine pounds, mixed hay ten pounds and rich concentrates 10.5 pounds to one lot of cows, and corn silage 45 pounds, mixed hay five pounds and rich concentrates 10.5 pounds to another lot. The daily milk yield was increased 3.4 pounds, or 11 per cent., and the fat in the milk .014, or about nine per cent., in the production of each cow. When the nine pounds of pulp and five pounds of hay replaced 45 pounds of corn silage, figuring the silage at \$3 per ton, the dried beet pulp would have a value of \$15 per ton, or figuring wheat bran at \$24, the beet pulp would have a value of \$16 per ton.

In some instances refuse molasses is mixed with the pulp and dried, which makes it more valuable for feeding purposes. At the Wisconsin station it was found that where three pounds of dried molasses beet pulp was fed against three pounds of wheat bran the milk production was increased 12 per cent. This molasses beet pulp cannot be fed in very large quantities, as it has a tendency to produce a looseness of the bowels. On account of the relatively low amount of protein in this feed it is essential that it be mixed with cotton seed meal, and about three parts by weight of the beet pulp to one of cotton seed meal. I do not know the price of this by-product, but I am inclined to believe that the expense of long shipment by freight would increase its cost beyond the possibility of profitable use in this state.

HIVE TOOL FOR BEEKEEPER

File Flattened at One End and Hook Bent at Other Makes Handy Device for Opening Frames.

The illustration shows a hive tool which, with us, gives excellent satisfaction. It is merely a file with one end flattened and the other end bent at an angle and a hook formed at the

Wax Separator and Hive Tool.

point. The hook is a boon in getting out frames and division boards which are stuck fast with propolis. The flattened end is used for scraping, prying covers, breaking apart hive bodies and supers, etc. The weight of the file makes it a good hammer for driving small nails.

Care of Horses' Feet.

Horses become unsound of limb when the wear and tear is not equally distributed, as certain parts bear an undue amount of weight, says the Bulletin of the New York experiment station. Equal distribution of weight-bearing and other functional activities is possible only when the form of the foot and the direction of the limb are correct. Any deviation from the proper standing position will cause a proportionate overtaxing of certain parts, resulting in unsoundness.

Sound feet are best produced by feeding nutritious food. Sudden changes of the food, periods of sickness, exposure to cold, damp weather for months at a time, all have an injurious effect on the feet. Hence, the coat should be fed regularly and generously, be well sheltered and be protected as much as possible against the ravages of disease.

Bull Helped Raise the Corn.

A notable feature connected with the prize corn (best ten ears eight-rowed yellow flint, open to Vermont only), raised by G. H. Adams of South Barre, Vt., was the use of a bull for the motive power in cultivating the crop. The animal was trained and started at work when two years old. He is now three years old, and last season he did his part in the work of planting and cultivating ten acres of corn. He drew the horse rake in harvesting the farm hay crop, drew home the winter supply of wood, and is also often driven in a wagon or sleigh. Although there are two horses on the farm, the bull is so handy that he does his full share of the work.

Cloverseed Scarce.

Cloverseed is extremely scarce this year and prices are steadily advancing. It is believed that the price will be practically prohibitive by seeding time next spring.

FORK AND SHOVEL COMBINED

Scoop Detachably Connected and Has Grooves for Tines—Handy Implement on Any Farm.

A combination implement that is handy for farm and stable use has been designed by a man in the state of Washington. It is a fork and shovel combined, and its advantage is that it takes up no more room than one of these tools and can quickly be turned from one into the other. The basic implement is a fork, and the shovel portion is adjustably connected. In the head of the scoop are holes through which the tines of the fork pass when the scoop is to be attached, and across

Fork and Shovel in One.

the bottom is a metal strip with a series of longitudinal grooves, through which the tines also pass and which serves to hold the shovel in position. The usefulness of such a tool can readily be understood. In a case where a man has both shoveling and forking to do, as around a barnyard, he can accomplish the work by a quick transformation of this device instead of having to go and get a different implement every once in a while.

CHARACTERISTICS OF A MULE

Smartest Animal of Horse Kind on Earth and Much Like Man in That Respect.

A mule is the smartest animal of the horse kind on earth. A mule is very much like a man in that respect, says a writer in the Stockman. He has all kinds of good sense, and if you treat him right he will act right, and if you do not he will be a good deal of a kicker. There is only one difference that I can see in that respect. You take men in our country and they are not, as a general thing, much enamored of their stepmothers, but you can take a mule and get him accustomed to his stepmother and he will go through fire to follow this mare-anywhere. They are easily handled in that respect. Put a mule with a gray mare with a bell on her, and you can handle the mule any way you want to. Put him in a pasture with two wires around it and he will stay there, unless he has been spoiled. No, sir; a mule is a very sensible animal, and an intelligent animal. He is no fool, by any means.

Protecting Trees From Rabbits.

Wherever rabbits are troublesome the orchard must either be protected by a rabbit-proof woven wire fence, or the individual trees must be covered. As a rule, only the tender bark of young trees is eaten, but for this very reason it seems wise to use some form of protection at the beginning, and not wait to see what will happen. The protectors usually used consist of short strips of tar or other stiff building paper or wood veneer, rolled into tube form and tied loosely around the trunk. This is sufficient to deter rabbits, and at the same time prevent sunscald. Such protectors can easily be prepared at home or purchased at small cost from a nursery or others handling orchard supplies.

Corn Makes the Best Silage.

Silage has been produced in this country for a comparatively short time, but its place is firmly established as an adjunct to the dairy. It provides a cheap, succulent food of uniform quality and is easily handled and fed. There has been a great deal of experimental work with silage, several crops having been used, such as clover, alfalfa, soy beans, sorghum and corn. Crops that may be easily preserved, such as hay and clover, are better cured, all things considered, than silage. Corn is easily the first as a plant for the silo. Large quantities may be grown on a small area of land, and it makes a silage possessing a delightful aroma.

Feeding Apples.

Apples have a special feeding value above that indicated by analysis. While they are largely water, still to give variety and succulence to the ration their worth cannot be estimated, as it depends both upon the individual and the ration being fed. Pumpkins and squashes have much the same value.

Loosening a Wagon Nut.

When a wagon wheel nut has become so set that it does not yield readily to the wrench, center a stream of hot water in the nut from the spout of a tea kettle. In a few minutes the nut may be turned off with the fingers.

TIMELY TAR HEEL TALK

NEWS NOTING THE PROGRESS OF A MIGHTY STATE.

FARMERS' UNION OFFICES.

State Headquarters Removed From Kings Mountain to Charlotte.

Charlotte.—The state offices of the North Carolina division of the Farmers' union have been removed from Kings Mountain to Charlotte. Mr. E. C. Fairies, who has been secretary and treasurer of the organization since it was started in 1908, has been making headquarters at his home town, Kings Mountain, but the executive committee decided to make the change at this time in the interest of facilitation of business and Mr. Fairies will spend much of his time here in the future, probably making his home here at length.

That Kings Mountain has been headquarters heretofore lies in the fact that the union gained its first foothold in the state at that place in 1907, and the territory adjacent to Kings Mountain was the first section of the state organized. From this point the work branched out, coming to Gaston, and later into Catawba, and then into other counties of the state. Mr. G. W. Fant of Texas, who had charge of the organization in the state before the state division was formed, made Kings Mountain his headquarters for the greater part of the time. When the state union was organized in 1908 and Mr. Fairies was elected secretary and treasurer, Kings Mountain was selected as state headquarters for the state organization and has remained so until the present time.

At the recent state meeting held at Greensboro, a resolution was adopted asking for the removal to Charlotte, but very little attention was given to the matter at the time. Those who opposed the removal of the state offices had hoped to make a fight against the removal, when the matter came before the executive committee on the ground that the expenses of maintaining the offices would be greatly increased and this would cause the offices to remain at Kings Mountain. However, the executive committee held a meeting at a time and place unexpected by the opponents of removal, and decided that the offices should be moved at once, regardless of the expense necessary to maintaining same.

CHARLOTTE MINT DOOMED.

House Conferees Disagree to Senate Amendment—Another Chance.

Washington.—Charlotte will probably lose her government mint after all. Some time back, when Senator Overman succeeded in having the senate appropriation committee incorporate an item of about \$3,000 with which to support the mint for the next fiscal year, it was believed all trouble was over, but Congressman Webb has been informed that the conferees on the part of the house had disagreed to the senate amendment and would not stand for it. Hence, it went out in conference.

The only means by which the mint may now be saved is for a future fight in the house. Inasmuch, however, as the matter has been lost there, both when it first came up and in conference, there seems little reason to hope for the longer operation of the mint. Unless money is appropriated, it will not be continued after June 30, 1911.

Monument to General Greene.

Greensboro.—Mrs. Joseph M. Morehead, widow of the late president of the Guilford battleground company, received this message from Congressman Morehead:

"Greene statue bill unanimously passed the house. My only regret is that its main factor and inspiration is not here to rejoice in the fruit of his labor."

This means that a monument to General Nathaniel Greene will be erected at Guilford battleground, by the United States government.

Wadesboro Loses Heavily by Fire.

Wadesboro.—The most disastrous fire in ten years destroyed four business houses and practically ruined three others last week. As a result, the total loss is about \$80,000 and there is possibly \$40,000 insurance.

Will Dam Savannah River.

Washington.—The house by unanimous consent has passed the bill authorizing Hugh McRae & Co., of Wilmington, to construct and maintain a dam across the Savannah river between Fibert county, Georgia and Abbeville county, S. C., near Cherokee Shoals. An act to authorize the construction of this dam by the same parties was passed March 2, 1907, but owing to the financial depression of that year it was not built. This act is in effect an extension of time in which the work may be done.

Hendersonville's City Census.

Hendersonville.—After a new census taking of Hendersonville, made by six public spirited citizens, there was found to be 3,705 living here instead of 2,818 as the government census gave.

Shelby Shocked at Figures.

Shelby.—Shelby received its census report with a shock and dismay. The enumerators found only 3,127 when the most conservative citizens had estimated that the report would show not less than 4,000.

IMMEDIATE EFFECT OF GREAT KIDNEY REMEDY IS SOON REALIZED

According to my experience I do not consider there is anything to equal Dr. Kilmer's Swamp-Root for kidney affection. Twice it relieved me when I was completely helpless.

The last time I was traveling in Texas, when my kidneys became affected, and for ten days I suffered excruciating pain, accompanied by severe chills. Several years previous, having been relieved of a similar attack, I naturally sought relief as before, from Swamp-Root.

After using four of the large size bottles, I was completely restored and went on my way rejoicing and praising Dr. Kilmer's Swamp-Root. This was three years ago, and I have had no indication of the return of the affliction.

Yours very truly,
J. C. SMITH, Jr.
Jackson, Tenn.

State of Tennessee
County of Madison
Subscribed and sworn to before me this 13th day of July, 1908.
P. C. STOVALL,
Notary Public.

Letters to Dr. Kilmer & Co., Binghamton, N. Y.

Prove What Swamp-Root Will Do For You
Send to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. It will convince anyone. You will also receive a booklet of valuable information, telling all about the kidneys and bladder. When writing, be sure and mention this paper. For sale at all drug stores. Price fifty-cents and one-dollar.

His Labor-Saving Device.
"I have discovered a great labor-saving device."
"I always said you were a genius. What is it?"
"I'm going to marry Miss Bullion, the heiress."

Constipation causes many serious diseases. It is thoroughly cured by Dr. Pierce's Pleasant Pellets. One a laxative three for cathartic.

Reforms come slowly because we all would rather wield the ax than bear the knife.

FILES CURED IN 6 TO 14 DAYS
Four druggists will refund money if PINKETTS fail to cure any case of Itching, Blind, Bleeding or Protruding Piles in 6 to 14 days. 50c.

Happiness grows at our own fire-side and is not to be picked in strangers' gardens.—Douglas Jerrold.

Mrs. Winslow's Soothing Syrup for Children teething, softens the gums, reduces inflammation, allays pain, cures wind colic, 25c a bottle.

Too often sermons have too much length and too little depth.—Judge.

Garfield Tea has brought good health to thousands! Unequaled for constipation.

An undertaker knows a lot of "dead ones" that he is unable to bury.

Itch Cured in 30 Minutes by Woolford's Sanitary Lotion. Never fails. At druggists.

Some tombstone inscriptions are too good to be true.

Take Garfield Tea! Made of Herbs, it is pure, pleasant and health-giving.

Every hear of a pearl being found in a church fair oyster?

Roots Barks Herbs

That have great medicinal power, are raised to their highest efficiency, for purifying and enriching the blood, as they are combined in Hood's Sarsaparilla. 40,366 testimonials received by actual count in two years. Be sure to take Hood's Sarsaparilla. Get it today in usual liquid form or chocolate tablets called Sarsatabs.

ITCH CURED

IN 30 MINUTES, By One Application of Dr. David's Sanative Wash
We guarantee DR. DAVID'S SANATIVE WASH to cure any case of Itch in 30 minutes, if used according to directions, or we will refund your money.
If your dog has scratches or Mange Dr. David's Sanative Wash will cure him at once.
