

CALOMEL MAKES YOU SICK, UGH! IT'S MERCURY AND SALIVATES

Straighten Up! Don't Lose a Day's Work! Clean Your Sluggish Liver and Bowels With "Dodson's Liver Tone."

Ugh! Calomel makes you sick. Take a dose of the vile, dangerous drug to-night and tomorrow you may lose a day's work.

Calomel is mercury or quicksilver which causes necrosis of the bones. Calomel, when it comes into contact with sour bile crashes into it, breaking it up. This is when you feel that awful nausea and cramping. If you feel sluggish and "all knocked out," if your liver is torpid and bowels constipated or you have headache, dizziness, coated tongue, if breath is bad or stomach sour, just try a spoonful of harmless Dodson's Liver Tone.

Here's my guarantee—Go to any drug store or dealer and get a 50-cent bottle of Dodson's Liver Tone. Take a spoonful tonight and if it doesn't

straighten you right up and make you feel fine and vigorous by morning I want you to go back to the store and get your money. Dodson's Liver Tone is destroying the sale of calomel because it is real liver medicine; entirely vegetable, therefore it cannot salivate or make you sick.

I guarantee that one spoonful of Dodson's Liver Tone will put your sluggish liver to work and clean your bowels of that sour bile and constipated waste which is clogging your system and making you feel miserable. I guarantee that a bottle of Dodson's Liver Tone will keep your entire family feeling fine for months. Give it to your children. It is harmless; doesn't gripe and they like its pleasant taste.—Adv.

ALL INQUIRIES NOT ALIKE

Philadelphia Lawyer Illustrated "Leading Questions" in Court With Diplomatic Kiss Story.

The late John G. Johnson, a Philadelphia lawyer, was once explaining to a jury the nature and the unfairness of "leading" or guiding questions. He illustrated his explanation with an anecdote.

"A young chap and a pretty girl," he said, "sat on a secluded bench at Lemon Hill. The girl turned to him and said earnestly:

"You ask me for a kiss. There is a language in kisses. A kiss on the hand denotes chivalrous respect. On the forehead it denotes a firm and faithful friendship. On the lips—her color rose and she drew a long breath—a kiss on the lips denotes all things. Kiss me, then, once. Express in one kiss your feeling toward me."

"The bashful youth pondered. 'I don't want to lose her,' he said to himself. 'Where is it best to kiss her? Hand, forehead or lips?'

"A mellow whistle interrupted him. He looked at the girl. Her red mouth was puckered up in the form of a rosebud; she had pulled down her hat so as to hide her forehead completely, and both hands were thrust up to the wrists in her pockets."

The Era of Censorship.

"A little learning is a dangerous thing," exclaimed the man who quotes. "Possibly," replied Senator Sorghum. "A great deal just now depends on how you got your information and what you intend to do with it."

Well-Known Firm.

"Who painted Brown's house?" "I think he said it was done by Fitz & Starts."

A torpid liver condition prevents proper food assimilation. Tone up your liver with Wright's Indian Vegetable Pills. They act gently and surely. Adv.

WAS ALL RUN DOWN Faulty Kidneys Caused Acute Suffering. Completely Recovered Since Using Doan's.

Mrs. Harry A. Lyon, 5 St. William St., Boston, Mass., says: "Doan's Kidney Pills have surely done me wonderful good. About two months prior to the birth of my baby, I had two convulsions and was taken to a hospital. Doctors said the convulsions were due to my kidneys not working properly.

MRS. LYON.

"I had swelling of the feet and ankles so that I had to wear large-sized slippers. My back ached intensely. I was nervous and unable to sleep. I also suffered from awful headaches and felt weak, tired, languid, and run down.

"After I came home a friend suggested that I try Doan's Kidney Pills, and I got some. I soon noticed improvement; my back became stronger and I felt better in every way. I kept on taking Doan's and was cured. They are surely reliable."

Mrs. Lyon gave the above statement in May, 1915, and on March 12, 1917, she said: "My cure has lasted. I take Doan's occasionally, however, as a strengthener for my kidneys."

DEFINITE ADVANTAGES OF SELF-FEEDER

FINE BUNCH OF PUREBRED HOGS ON EASTERN FARM.

(From the United States Department of Agriculture.)

There is no advantage in skipping the pig when it comes time to fatten him, the United States department of agriculture points out. During the growing period of his life, pastures with little grain were in order, for scale and constitution were the main objects to be obtained. The last few weeks before butchering the idea is to lay on a good covering of fat, to increase the proportion of high-priced lard, and to add tenderness and palatability to the meat. A fat hog sells to much better advantage on the market for these very reasons.

To add this fat rapidly and most economically, we must feed an abundance of grain. The self-feeder is simply a device to keep before the pigs a constant supply of feed, in order that they may eat of such feeds in such quantities as they desire.

Results With Self-Feeder.

A brief resume of results obtained by experiments with over 275 hogs, part of them self-fed and the balance hand-fed in the best possible manner, shows:

1. That in comparison with the hand-fed pigs, the self-fed pigs ate grain 19 per cent more rapidly.

2. That they gained weight 28 per cent more rapidly.

And last, that they consumed only 92 per cent as much grain in gaining 100 pounds.

This shows three very definite advantages in the use of the self-feeder. Pigs fed in this manner will eat more grain per day than under any other method of feeding. This maximum consumption is not wasteful of grain; in fact it saves grain, for an increase of 19 per cent in the rate of eating caused an increase of 28 per cent in the rate of gaining. The object in feeding is to put on fat as rapidly and with as little grain as possible. A method which will increase the rate of gaining 28 per cent and at the same time decrease by 8 per cent the grain required to produce a unit of gain is certainly worthy of the breeder's consideration.

How to Use Self-Feeder.

Fill part of the self-feeder with corn or similar carbonaceous feed and the other part with protein supplement; also take care to see that it is kept filled. Induce well-grown shoats to eat when and what they choose, and save grain, save labor, and get your hogs to market at the earliest possible date.

SELF-FEEDERS USED FOR FATTENING PIGS

Most Economical Plan to Finish Off Porkers for Market—Much Waste Eliminated.

(By I. W. CARPENTER, Mississippi A. and M. College.)

It is to the interest of farmers having hogs to be finished, either for market or butchering this winter, to get them ready in the quickest and most economical way, since the prices of feedstuffs are so high. This can best be done by putting the hogs on a self-feeder with corn in one compartment and either tankage or cottonseed meal in the other. A self-feeder is nothing more than a hopper which allows the feed to come down as needed by the hogs, and at the same time prevents waste, as it is necessary for the feed already down to be eaten away before any more comes down. These feeders can be made on almost any farm out of scrap lumber if necessary.

Self-feeders pay, even though there are only a few hogs to be fed. They have uniformly given better results than hand feeding, both at the experiment station and on farms in Mississippi. Hogs not only make larger daily gains, but the same amount of feed will make much more pork. This evidently can be accounted for by the fact that the hog was allowed to eat at will, consequently never gorged itself, thus enabling it to digest its food more thoroughly.

For the greatest and most economical gains it is essential to have either tankage or cottonseed meal in addition to corn, as this gives the needed balanced ration. It will also harden pork faster than corn alone. As long as there is corn in the self-feeder, there is no danger of the hogs eating enough cottonseed meal to injure them.

In addition to the feeds in the self-feeder the hogs should be given plenty of fresh water and dry quarters for them to sleep in, as it is impossible for them to do their best in a filthy pen. Too, the best quality of pork will not be secured from hogs in filthy pens.

BETTER CARE SHOULD BE TAKEN OF HORSES

Animal Must Be Looked Upon as Chief Source of Power Required on Many Farms.

Better care should be taken of work horses in order to aid in the effort for increased crop production, believes Dr. C. W. McCampbell, associate professor of animal husbandry in the Kansas State Agricultural college. Horses must furnish the greatest part of the power required on many farms.

"The tractor, of course, has its part to play, but statistics show that there are more than 15,000 acres of cultivated land in Kansas for every tractor in use," said Doctor McCampbell. "This should be evidence enough that the horse must be looked to as the chief source of power on the farm. Because of this fact he should be given more consideration and greater care so that his productive power may be as large as possible.

"Feed the horse one-fourth of his roughage in the morning, only a small amount at noon and the remainder at night. Little hay should be fed at noon as it is bulky and a full stomach cuts down efficiency. At the present war prices oats are cheaper as a grain feed than corn, and good bright cottonseed meal is the most economical source of protein and the cheapest supplementary feed to be had. A maximum of about two pounds a day of cottonseed meal is all that should be fed and the horse should become accustomed to it gradually. Begin with one-fourth pound the first day, increasing it a quarter pound each day until the right amount is reached. None but the best quality should be fed and should contain not less than 41 to 43 per cent protein.

A ration of eight pounds of oats, two pounds of cottonseed meal, fifteen pounds of straw, and one pound of molasses a day for each 1,000 pounds live weight is given by Doctor McCampbell as one of the most economical to feed under the present conditions and high prices. The straw should be fed in the morning and evening and the molasses sprayed on it. This ration has proved successful and has given good results.

Another point often neglected with the horse is that of watering. Water immediately after a meal washes the feed from the stomach and thus decreases the value received from it by the horse. The farmer should take a barrel of water to the field with him and give his horses a bucketful at least once each half day.

Cut the grain ration down to one-half on Sundays and any other time when the horse is not working. Full feeding while not at work causes disorders and the disease known as azoturia or "Monday morning sickness." Feeding less while not at work is an economical practice and much better for the horse.

Sanitary conditions tend towards general thrift among hogs. It pays dollars and cents to keep the surroundings clean, points out Ray Gatewood, instructor in animal husbandry in the Kansas State Agricultural college.

"Prevention is always the cheapest and easiest manner in which to deal with disease," said Mr. Gatewood. "The houses should be kept clean, dry, and free from dust. In case the house becomes foul it should be cleaned, disinfected and a small amount of lime scattered about the floor. It is also good practice to whitewash the walls frequently.

"The lots should be kept clean. Cobs should be burned and the ashes and charcoal given the hogs. The pens should be kept free from manure and, when possible, it is a good practice to move the hogs to new soil. This helps to keep them in a more healthful condition.

"Keep a close watch for the appearance of disease. Find the trouble and act accordingly. Do not put it off too long for a great loss may be incurred by waiting. Unthrifty hogs and profit do not go hand in hand."

Sanitary hog house is most important. Clean surroundings tend toward general thrift among hogs to prevent disease.
