Europe wants to hire Uncle Sam as an efficiency expert if he will pay for all the improvements.

The man who operates on credit has to be mighty careful about what the neighbors say about him.

Anyway, nobody has covered our bet that you can never win a fellow's af fections by trying to reform him.

If those pointed shoes the Turks wear are made of wood or steel, the Turks must be disagreeable kickers.

Matrimony settles down to normal when the wife sighs in resignation and cides to make the best of things.

A few of the war profiteers may be tempted to put up a pien that the money was practically forced on them.

Correct Lacking Material.

Barnyard manure is used by mos successful farmers as an economical means of increasing crop yields and maintaining soil fertility. But the esition of barnyard manure as related to soil building and permanent agriculture is not so generally known To get the largest returns from nure it is necessary to supplement it with the element in which it is deficient.

Composition of Manure. A ton of average barnyard manure contains ten pounds of nitrogen, two pounds of phosphorus, and eight ands of potassium, according to L. Wainscott, assistant in the soils department of the Missouri College of Agriculture. Comparing this com-position with a standard commercial fertilizer such as 2-12-2, one can see manure is relatively deficient in the element of phosphorus This element has been sold in the grain or retained by the animal body and is not found in the manure in such large ntities as the Litrogen and potas-

To Correct Deficiency.

Although many factors influence the sition of barnyard manure, even, the best methods of handling cannot correct this deficiency. Only one method of supplying the deficiency is known, and that is to reinforce the manure with mineral phosphate. Many soils are deficient in phos phorus. On many of them phosphorus

is thought to be the limiting clement.

I phosphate to each load of a well-balanced fertilizer cent and may be had at the least cost. ults from the Missouri experiment station show that \$1 invested in

phosphate to reinforce manure will return 386 per cent on the invest-

main in the soil for several years and are difficult to control. A case is cited where every plant on portions of a cranberry bog in Massachusetts was killed. All the roots were destroyed. New vines were planted, and almost immediately numbers of robins were seen at work there. They dug into the sand with their beaks and pulled out the grubs. Some of the roots of the vines were cut off by the grubs, and these vines the robins pulled up and discarded, and dug out the grubs The robins worked so diligently that practically no grubs escaped and nearly all the vines sur-

ta fever. **GOOD ROADS HELP PHYSICIAN**

anying Development of Auto mobile Has Greatly Increased His Efficiency

The building of good roads with the accompanying development of the automobile, has greatly increased the efficlency of the practicing physician. Bethe motor reached its present state of development, physicians were elled to make their calls on foot on street cars, or by carriage, in cities and on horseback or by carriage in the country. Asd a result, the physician was limited in his practice, and the community or portion of it, at least, was denied the medical and surgical relief necessary to the highest pos-sible degree of health. Lives frequently paid the penalty, and unnecessary suffering was always the result.

LIKE HARD SURFACED ROADS

Macadam or Broken Stone Mater Being Discarded for Cement for Heavy Traffic.

The ordinary broken stone or mandam road, invented by John Mac macadam road, invented by song mac-adam, a Scotch road engineer of Ayr-ahtre, has until recently been in gen-eral use. These are now giving way to the hard surfaced roads that are ter adapted to automobile and truck traffic. Seaweed, cotton, hay and strav have often been used in the constru-tion of roads and in contrast to suc tion of roads and in contrast to such instartials It is interesting to note that iron and steel have been used. A steel road has been in use in Calencia, Spain, for 20 years. Cement roads in America are now commonly being re-inforced with steel.

Peed for Dairy Cows. Boy bean hay is a very good feet for dairy cows. It contains 21.7 per cent digestible protein, which makes a quite equal to alfairs.
