YOUR HEALTH

"NEW" OR SPANISH INFLUENZA

Our State Board of Health states:

"The disease is due to spit swapping. Spit is swapped or exchanged in the following ways: (a) by coughing or sneezing into the air instead of into a handkerchief. In open coughing or sneezing, an infectious and invisible spray is thrown several yards into the air and floats for thirty to sixty minutes. The greater the spraying, as in the psychic waves of coughing that pass through assemblages, moving picture shows, churches, and other gatherings, the denser and more potent the infectious atmosphere; (b) by soiling the hands with spit (very small, invisible amounts) and transferring the spit to the hands of another person in handclaps, or by handling something, as a door knob or some article from which a second person gets the minutest amount of spit; (c) by using the comon roller towel contaminating and being contaminated; (d) by using comon drinking dippers, comon drinking cups, and comon spit infected water from a comon bucket; (e) by using anything other than paper cups, ice cream saucers, and spoons disinfected in visible boiling water at soda fountains.

DON'T'S

"1. Don't associate with the impolite and careless, who spray your air with their spit.

"2. Don't go to unnecessary public gatherings while the epidemic is on. Put your moving picture show money in Thrift Stamps.

"3. Don't drink from comon drinking dippers and drinking cups.

"4. Don't use a roller towel.

"5. Don't patronize a soda fountain that does not use paper cups.

"If you get the grippe: Go to bed and stay there until you are well, until your temperature has been normal for at least 2 days. If you are past fifty, or if you are not strong, stay in bed four days after normal temperature. Remember, the danger of grippe is pneumonia. Pneumonia is the penalty for disrespect to the grippe that gets out of bed too soon."

The county board of health ever watchful to prevent the spread of disease and protect the health of the people, has closed al churches, public schools, places of amusement and all public gatherings, in order to prevent the spread of Spanish influenza which is very contagious.

The people should aid in this work and should avoid all public gatherings, social gatherings, should stay at home as much as possible, and should by all means, keep their children at home and away from other children. To prevent the spread of this disease, isolation and sanitation should be carried out to the fullest extent. Remember, that the soda fountain can spread this and other diseases. Paper cups should be used and everything else sterilized.

From a close bed-side observation of several cases of the Spanish influenza, I feel safe in saying that it is the same old grippe, but it is more acute from the fact that it is a fresh importation of disease, different only in some symptoms, because different organs of the body are more affected, giving different characteristic symptoms.

The grippe that we have had for years, has been different in this respect in each epidemic.

In one epidemic the muscular system seemed affected, in another the nervous system, in another the digestive organs were most affected, giving us the so-called "intestinal grippe."

In this epidemic which threatens to spread rapidly, while the sufferer complains of a general grippe as of old, there are special symptoms and to a great extent different organs affected, principally the head, the joints, and the respiratory organs.

Sharp pains in the hips and other joints, an intense weakness of the knees, patient feels as if he would sink to the floor, the headache is severe, splitting, mostly frontal and straight through the temples, there is a feeling of vertigo, or a dizzy feeling, patient feels as if he had lost his powers of equilibrium, a feeling as if he could not balance himself, the stomach is affected with more or less nausea, there is a great deal of pain in the back, in some cases great soreness of the skin, some complaint of great insomnia, impossible for them to sleep, sore throat is frequent.

The disease is ushered in with pronounced chills, or chilly feelings, the loss of strength is sudden, there is a feeling of intense weakness, a very hopeless feeling of weakness, the lungs, bronchial tubes, mouth, mucous membrane of the nose are affected and throw off contagious germs.

The lungs expand poorly, the respiration is frequent and shallow, the cough is very irritating and constant, the pulse runs from 100 to 115 and 120 or higher, rather soft, the temperature, 100-102-103 to 104 and sometimes higher, the tongue is sometimes slightly coated, the bowels torpid.

This disease is at first or sooner or later, essentially a disease of the lungs, there is always congestion of the lungs and frequently pneumonia if the latter is not prevented by timely and proper treatment, and the congestion and pneumonia prepares the lungs for consumption in neglected cases. While all of the symptoms call for relief, the lungs should receive the first, best and last attention. The lungs are the doors at which death enters.

C. W. Hunt,
County Health Officer.

\$100 Reward, \$100

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages and that is catarrh. Catarrh being greatly influenced by constitutional conditions requires constitutional treatment. Hall's Catarrh Medicine is taken internally and acts thru the Blood on the Mucous Surfaces of the System thereby destroying the foundation of the disease—eradicating the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in the curative power of Hall's Catarrh Medicine that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address F. J. CHENEY & CO., Toledo, Ohio. Sold by all Druggists, 75c.
