All persons indebted in any way to said estate are hereby requested and required to make immediate settlement.

Feb. 25th., 1922.

MOLLIE J. DUCKWORTH, Administratrix

Estate of J. E. Duckworth, deceased.

Welch Galloway, Atty. April 7-c-W. G.

HINT TO "SUCCESS SEEKERS"

"Cultivate the Thrifty, You May Need Their Savings," is Advice Given by Humorist.

Honesty and industry are requisite of success in business. The young man who is determined to become very wealthy must therefore cultivate persons who are honest and industrious, writes Don Marquis in the New York Sun. Honest and industrious persons are very apt to believe in the integrity of others, and this makes it far easier for an enterprising young man to do business with them advantageously than if they were self-seeking and suspicious. Profits are always to be derived from honesty and industry, if the thing is managed cleverly.

Thrift cannot be too highly commended. Teach all those with whom you come in contact to be saving. You never know when you may need their savings to finance one of your ventures. Analyze any great fortune and you will find that it is built of small savings.

Sobriety cannot be too highly praised. The staid and sober person is dependable. You can count on him receiving a certain calculable income year in and year out; and if you have enough persons of this sort on your list you are building on a solid foundation; there need be nothing haphazard about your methods.

Steadily, so many hours a day, a reliable, specified number of sober methodical persons are piling up for you each his modest proportion of increment, and at stated seasons it becomes yours, just as the apiary gathers a proportion of the honey from the hives. The wastrel may have money at times, and it is usually easy to get it away from him when he has it; but he is not dependable; there will always be occasions when others will get to him first.

Build your own list, and make your relations with the persons on it permanent. It is better in any event never to associate with wastrels. They are not moral persons, and you must be known as a man with moral associations. This is a great help in business.

Diamond Cut Diamond.

William J. Burns, seated at his desk in his Washington office, said during an interview:

"Sometimes, again, we oppose gulle with gulle. We out-herod Herod. For example:

"A doctor was visited by a man and a boy. The man said:

"Doctor, this here's my son. His school teacher gave him a whack on the ear yesterday what ruined his hearin'. Just write me out a paper, will you, so as I can claim damages?"

"The doctor saw at a glance that he had a case of fraud before him. He tried all kinds of noises on the boy, but nothing would make the well-coached youngster hear him. So finally he looked into the injured ear with a little mirror, saying at the same time in a whisper to his assistant:

"Dear me, it's as I thought. The whole organ seems to be destroyed. I can't see very well inside, though. Hand me that large knife, please, so that I can cut the outer ear off."

"With a yell like a Comanche Indian the boy dashed out of the room, and that was the end of the case against the school teacher."

Cow Moose Skilful Boxer.

In the northern and western forest regions of Canada the snow piles deeply throughout the winter. In these forests roams the king of the deer family, the moose. To combat the high-piling drifts, the animals gather in little bands of from three to a dozen head and trample down the snow over certain limited areas. Thus, when the snow lies all around them, from three to eight feet deep, the moose have a small stretch of country packed hard, so they can get around easily to browse off the surrounding trees.

From these "yards," as they are called, the moose are at times driven by wolves or by dogs and men. The animal flounders through the deep snow till it is exhausted, and then proves an easy prey to its pursuers.

Though she has no horns, the cow moose possesses dangerous weapons in her two forefeet, which can strike forward with the skill of a boxer and deliver most telling blows.

Stops Planes Cotton Waste.

Cotton waste, which has long been used in cleaning all kinds of machinery, has been banned in the workshops of the Canadian air service. When airplane engines are overhauled and waste is used, the engines have often stopped when they were afterward placed in service.

"These cases have appeared to be due, not to waste being accidentally left in the engine parts, but to an accumulation of small pieces of cotton thread that had been left on engine parts after cleaning with waste," says Lieut. Col. E. W. Stedman, director, technical section, Air Board. He urges that commercial companies also prohibit such use of waste.—By Science Service.

London's Literary Nights.

Literary evening institutes have been established by the London county council for persons older than eighteen years of age. These institutes do not undertake any vocational training, but give courses in such subjects as music, including country dances and folk songs; astronomy, biology, horticulture, history, languages, art and modern English literature. The schools are conducted on the co-operative plan, and they carry out the ideas and suggestions of students. Educational visits to places of interest are on the program.

STRONG IN BODY

Men of Genius by No Means an Unhealthy Lot.

Lives of Many of the World's Greatest Men Show That Mental Power and Strength Go Together.

The popular idea that geniuses are usually physical weaklings or men of poor health is vigorously combated by Prof. Rudolph M. Binder of New York University. As a matter of fact, says Professor Bender, according to the New York Sun, it is only because there has been so much comment about the comparatively few physical weaklings who were geniuses that the tradition has grown that exceptional mental power and bodily weakness are related conditions.

Declaring his belief that there is no weakling genius who would not have been a greater one had he been of sound body, Professor Binder points out that most of the world's greatest geniuses were not only healthy, but often of more than ordinary physical strength.

"Illustrations of this could be extended indefinitely," said Professor Binder, "but it is necessary to mention only a few shining examples down the ages. Let's begin with Socrates. The great philosopher served as a hoplite, which means that he was a member of what we in modern terms would designate as shock troops. He was seventy years old when he was condemned to drink the hemlock.

"Coming down many centuries, Sir Isaac Newton lived to be eighty-five, and was strong and healthy and a hard worker till within a short time of his death. Darwin was born with a rugged constitution, which he ruined by his failure to care for it, but it enabled him to accomplish a remarkable amount of work before he died at the age of seventy-three.

"If proof were needed that Herbert Spencer was born with an iron constitution it would be provided by that incident of his boyhood when at the age of thirteen he walked 48 miles one day, 47 the second and 20 the third, and with very little food during the three days. Spencer is another man who injured his health by the lack of care of himself, but if he had not been naturally strong he would not have lived to be eighty-three.

"Even Shakespeare who died at fifty-two, might be said to have lived a good life considering the amount of work he did as playwright, actor and manager. Goethe, an exceedingly busy man, was in good health almost to the time of his death at eighty-three.

"Of the four probably most famous Italians Dante lived to be only fifty-eight, but his life was one of arduous labor; Leonardo da Vinci, an athlete who outstripped far younger men in feats of strength, was nearly sixty-seven; Michelangelo worked furiously most of his ninety years, and Galileo enjoyed good health till his death at seventy-eight.

"It was because the population as a whole was strong in body that Athens produced such a remarkable number of geniuses in the days of its glory, and if we want to increase the number of geniuses in the world today the way to accomplish it is to improve the health of all the people."

Flowers Unfold in Four Series.

A flower is usually made up of four different kinds of parts, arranged in circles, or whorls, one within the other. Outermost are the sepals, making up the calyx; they are usually firm and green. They protect the bud and steady the opened flower. Next come the petals, making up the corolla; they are usually delicate and colored, often fragrant and often making nectar; they thus attract insect visitors, and they are also useful in protecting the even more important parts further in.

The third whorl consists of the red-like stamens, whose heads or anthers make the golden yellow fertilizing dust or pollen. The innermost parts of the fourth tier are the carpels, which bear microscopic egg cells, each of which, if fertilized, will develop into an embryo plant; or, to put it in another way, the carpels bear possible seeds or ovules, which become real seeds when the fertilizing golden dust penetrates into them.

How Rodents Spent Nights.

Spying on the night habits of mice and other small rodents is now occupying the attention of Vernon Bailey of the biological survey of the Department of Agriculture.

He lets some of them sleep on a sleeping porch and flashes a light on them at various times. Others spend the evening with him in the library. Another lot he has placed in a room at outdoor temperature so that he can find out how they hibernate for the winter.

Mr. Bailey is observing a bat in addition to 15 different kinds of rodents that he captured alive in Arizona last spring, and he also is studying his beavers that live at the National Zoological park.

More Appropriate.

The Host of the Graball Inn—That's a new pennant I had designed to hoist over the inn. What do you think of it?

The Guest—Very pretty. Captain Kidd flew the skull and crossbones.

Still Survive.

"I have one grudge against 'Noah.'" "What is that?"

"He took a lot of old anecdotes into the ark."—Louisville Courier-Journal.

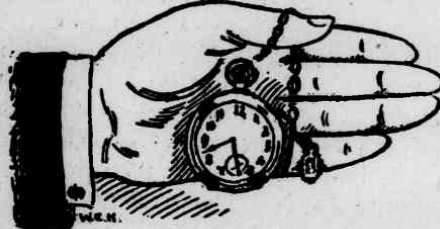

ATLAS PORTLAND CEMENT

A NEW industry comes to town, or an old one moves into new and better quarters. Either is a credit to the community and to the merchant who thus gives evidence of his progress.

One man has played a possibly unnoticed, but no less essential part in this community improvement—your building material dealer. His investment in a slow moving stock, building materials, is a definite pledge of his belief in the community. His stock and ability to deliver promptly enable you to take advantage of weather conditions, and rush unexpectedly needed construction. Your building material dealer's judgment deservedly has weight. He is the man who has called Atlas Portland Cement "the Standard by which all other makes are measured."

THE ATLAS PORTLAND CEMENT COMPANY
 Sales Offices: New York, Boston, Philadelphia, Mills, Northampton, Pa., Hudson, N. Y., Leeds, Ala.

"The Standard by which all other Makes are measured"

A Good Watch

Should last a life time.

Therefore care should be exercised in purchasing one. If you buy one of me, it is backed by a guarantee for which I am responsible.

You can depend upon getting a reliable time-piece when you buy of me; not because I sell it, for that is no reason why it is the best, but because it is the best is the reason I sell it.

FRANK D. CLEMENT,
 The Hallmark Jeweler
