

F. F. A. GROUP MAKE STUDY OF METHODS IN PRACTICAL WORK

(Continued from Page One)

John C. Calhoun and, later, founded the college which bears his name, on the grounds which were a part of the Calhoun estate. This was a historic treat for the boys.

The boys had their lunch at Coe's tourist camp, and continued on their way which took them by way of Gainesville, Ga., and gave them a piece of the University of Georgia located there.

Mr. E. S. Pappay, manager of the White Provision Company gave the boys a most cordial welcome as they drove up to the company's plant in the north side of Atlanta. Mr. Pappay had made a trip to Brevard and met some of the boys. He remembered them and called some of them by name and made them feel at home from the very beginning. All other officials of the company went to great lengths to make the boys have the time of their life.

As soon as the boys could get themselves in readiness they were taken to the private dining room of the company where they enjoyed a real banquet which was planned and prepared by Mr. O. M. Carr who is in charge of the cafeteria. After the banquet the boys were taken in private cars by members of the company's staff and were shown the "sights of the city of Atlanta, the gateway to the south." They then returned to the office of Mr. H. T. McKown, live stock buyer for the company.

After the exchange of jokes, stories and experiences the boys retired—but not for long. They claimed they could not sleep because of the noise made by the trains, trolley cars, motor traffic to which they were not accustomed. At about 3:30 in the morning Mr. Glazener was aroused by the unloading of two carloads of hogs and went out to investigate and see if the boys were alright. He found all of them on the fence watching the unloading excepting four who had gone to sleep in the ball park.

After a hearty breakfast in the company's dining room the boys were conducted through the plant by Mr. Pappay, manager, Mr. McKown, live stock buyer and Mr. L. Neukoff, plant superintendent. The butchering of cattle held the interest of the boys and from there they were escorted to the cutting and finishing rooms where a practical demonstration was given as to the difference between properly finished hogs and those that were not properly finished, and why the company can pay more for the former. The latter can only be used for lard. This demonstration was of much interest and was followed up by a trip to the stock yards where live hogs were shown and the differences between the finished and unfinished pointed out. While there Mr. H. McDowell, superintendent of the company's plant at Moultrie pointed out the kind of hogs the packer wants and the kind he does not want. The boys got a big kick out of this as some of the ones they picked out were the acceptable ones.

After lunch, which was also furnished by the company in their dining room, they were taken to the private zoo of Asa G. Candler, wealthy Atlanta capitalist and philanthropist, who personally escorted them through his zoo which is one of the most remarkable in the country, containing some very rare animals. They were particularly impressed with the cleanliness and neatness of the place. A special type of glass roof is used so that in inclement weather the animals will have ample protection. Mr. Chandler told them the story of each of the rare animals in the collection and made the trip not only interesting but profitable.

On their way back to the White Provision Company's plant a stop over was made at the Federal Penitentiary where the buildings and grounds were gone over by the boys. Supper was awaiting them on their arrival at the plant.

Mr. Cecil H. Rollins city sales manager of the company and some of his men had been plotting while they were away, the results evidenced by their being hauled into the cars of these men directly after supper and being taken to the Paramount theatre where they enjoyed the picture and afterwards the refreshments served them. Back to the plant; and did those boys sleep. Not a one of them but

what was willing to admit that not nearly so many trains and trolleys were abroad that night. They all slept.

During their stay in Atlanta they met Mr. Truett, County Agent of Fulton county and his associate Mr. Gladden. Reporters from the Atlanta Constitution came out to visit them and brought a photographer along with them. Announcement was made over WGST the Georgia Tech station as to their being there and the purpose of their visit.

The last few hours of their visit was devoted to watching the butchering, scalding and dressing of the hogs under Government inspection. This plant has a capacity for butchering of about three hundred hogs per hour.

At 8:30 o'clock the boys bade adieu to their hosts and proceeded on their way to Rome which place they were to visit on their return because of the interest in the Berry schools located there.

On arrivals there they were conducted over the grounds and buildings comprising the institution by the school post master and a trustee. The Martha Berry schools were founded by Miss Martha Berry as a small log cabin school for mountain boys and girls. This work has developed to such an extent that the fame of this institution has reached throughout the country.

Of particular interest here they found the beautiful buildings which were provided through an endowment of Henry Ford. They are beautiful and up to date in every respect. The tour took them over the fields where they were shown the methods of soil preparation and fertilization employed there. This old worn out land has been built up to a point where exceptional yields are now being made. On one tract of 120 acres the average yield of oats for the last crop was 80 bushels per acre.

After being shown the dairy herd, the modern barns and the printing office and learning that many of the buildings there have been erected with student labor from brick made by them, they continued on to Chattanooga, stopping for a time to view the beauties of Chickamauga Park.

From Chattanooga they went on to Knoxville and to the University arriving there at 1:30 and spent the rest of the night on cots in Temple Hall. Arrangements had been made for them by the American Limestone Company of Knoxville.

Next morning the boys were conducted over the grounds of the University Experiment station's grounds by Mr. J. C. McAmis, research worker and Dr. C. A. Mooers. Of particular interest to them here was the beautiful field of Lespedeza Sericea, due to the fact that a few acres of this crop are being grown in Transylvania this year for the first time. More work is being done on this legume by this station than by any other station in the south, having been experimenting with it for the past four years. They have found that it makes fine hay and that the cattle eat it readily. It makes a better growth on poor soil than any other clover and its drought resistant. Has large yields of seed and at this time these seeds are selling at a very high price. Several cuttings may be made each year. It is unnecessary to replant as it is a perennial. (It is Prof. Glazener's aim and hope to have this clover all over Transylvania county as a hay crop and as a soil builder, laying the foundation for a live stock program.)

Before finishing the experiment plots Mr. Furman Smith general sales manager of the American Limestone company and Mr. E. W. Mathew were ready to take the party in charge. They were taken out to the company's plant and shown the process used in the manufacture of fertilizer. They were invited into the office of the president where they heard him talk on the proper use of ferti-

lizer. His company is manufacturing fertilizer according to the University's findings.

Back to the University and Mr. Smith informed the boys that there would be plenty to eat at the cafeteria if they were not too bashful to ask for it. Judging from the way they went at it they were not bashful. The University has a beautifully furnished and managed cafeteria and according to the boys the food "can't be beat."

Later in the afternoon they were taken to the company's plant at Mascot, 15 miles from Knoxville where the limestone is taken 600 feet underground, brought up on automatic cars to the surface, hauled to a considerable distance and dumped. All this is done automatically. The entire process of mining and preparing the lime was followed by the boys who showed considerable interest in every phase of the process of manufacture. They climbed to the top of a stack of fertilizer in which there were more than a million tons.

After visiting the American Lime-

BANK AND POST OFFICE CLOSE ON LABOR DAY

The bank and post office here will be closed all day Monday in observance of Labor day.

PRINCIPALS WILL MEET SATURDAY

According to Prof. J. B. Jones, city-county superintendent, a meeting of the school principals of the county will be held at the high school auditorium, Saturday morning at 10 o'clock. The principals are especially urged to be present for this important meeting.

ONLY TWO CASES ON MAYOR'S DOCKET

Mayors court has been pretty quiet during the past week, only two cases appearing on the docket. Both of these were drunks.

FARM QUESTIONS

Q. Grain moths and weevils are unusually bad in my storage room. How can I get rid of these?

A. Carbon disulphide poured over the grain or placed in pans on top of the grain will control these pests. Where the grain is to be used as feed the mixture may be poured directly on top but where it is to be used for seed the carbon disulphide should be placed in pans on top of the grain. In both cases the mixture evaporates and the fumes settle to the bottom. For best results, the bin or storage room should be kept tightly closed.

Q. Is one worming of young pullets sufficient to rid them of worms or will the dose have to be repeated?

A. This will depend upon the degree of infestation but, if you will carefully cull out those birds that are diseased or run down, one worming should be sufficient. A careful check should be made, however, on all birds that die or are dressed for broilers after the first worming is completed. If there is still a fair infestation, the dose should be repeated. Directions on the worm tablet package should also be carefully followed.

Q. What can I do now to insure good, healthy bee colonies next spring?

A. First see that all colonies are headed by a young, vigorous queen. This will add young bees for the winter and will also build up the colony next spring. The bees must have plenty of food and at least fifteen pounds of honey should be allowed for each colony. In some cases most of the honey is removed with the supers and as a result brood-rearing is restricted. This means a small colony with poorly developed bees. Check all colonies and see that at least fifteen pounds of honey is reserved for winter feeding.

GREAT THROG AT HOME COMING DAY

(Continued from page one)

tivity," as he was introduced, sang a bass solo that was greatly enjoyed.

Officers were elected and installed, and already the committees have begun making plans for the home-coming a year hence. S. A. Jones was elected president; J. W. Burns, vice president; Miss Jennie L. Bishop, secretary and treasurer. Mrs. Willie Jones, Mrs. Sadie Allison and Miss Vera Jones were named as program committee for the 1933 home-coming.

A complete list of the names and addresses, occupation, profession and other information, of all the people attending the home-coming last Sunday will be published in next week's Brevard News. Because of the long list of names and the time required to set the list in type and proof read it carefully, it cannot be published this week. Many requests were made

on the machines and that they be reminded that the buses be used for school children only. The drivers were informed that the average cost of their bus per mile would be compared with the results of the other drivers. They were urged to keep the buses clean and sanitary at all times.

for publication of this information in The Brevard News, that all interested people might have a lasting record of the day's events and the people attending the 1932 home-coming.

Many warm words of praise were given Mrs. A. E. Smith and her committee for their tireless efforts in making the day one great success.

CLEMSON THEATRE

BREVARD, N. C.

Program Week of September 5th

Monday-Tuesday, September 5-6th
