ALFALFA SUBJECT OF NEW BULLETIN

Fertilization is the key to successful alfalfa production.

That's one of several important points brought out in a bulletin on "Alfalfa Production" which has just been reprinted by the State College Extension Service.

The authors of the bulletin, Agronomists S. H. Dobson and R. L. Lovvorn, point out that even the best soils require fertilization to maintain a good stand and produce a good yield over a period of several years.

Dobson and Lovvorn emphasize that hay is needed in any balanced feed program and that alfalfa, "king of the hay crops," can be grown successfully in North Carolina. Alfalfa, they say, is rich in proteins, minerals, and vitamins A and D and is especially good for dairy cattle and all types of young growing stock.

The publication gives detailed information on soil selection, liming, fertilization, seedbed preparation, seeding, cutting and curing, and management.

Persons desiring a copy of "Alfalfa Production" may obtain one from the local county agent or by writing to the Agricultural Editor, State College Station Raleigh, and requesting Extension Circular No. 307. There is no charge.
