

VALUE - far beyond Price

Owners' experiences show that the Ford V-8 is the best investment you can make in an automobile

A great many people do not buy an automobile every year and the true test of car economy comes after the first year... And owners of Ford V-8s agree that—"The mechanical depreciation on a Ford is less than most cars, especially after the first year."

The reason that this is true of Ford cars goes way back to the raw materials of which they are built... Men who make steel know that "Ford buys the best steel"... And this rigid insistence on extra value goes right through the whole manufacture of a Ford V-8... low priced Ford replacement parts are built to the same high standard as those in the new car.

Because the car itself lasts longer, costs less to keep up, yet costs no more in the first place, Ford owners agree that—the 1936 Ford V-8 is the best automobile investment you can make today.

COUNTY FARM NEWS

(From 4th Page)

and North Carolina. Madison County is losing her part of this enormous loss from all parts of the county than others. On Mr. Levi Buckner's place, Ivy, N. C., has been a great loss. In Mr. Buckner's bottom land that is most valuable of any of his crop land on the farm. The bottom is 660 yards long. A new stream bed has been cut all the way through the bottom. It is from forty to eighty feet wide. This land was worth \$300.00 per acre and there has been over two acres completely destroyed. Three acres more are greatly damaged with another wash threatening in the same bottom. Valuating this land at \$300 per acre like the approximate loss and damage on this bottom land alone due to soil loss is approximately \$100,000. A number of Mr. Buckner's neighbors have had considerable damage done by erosion also. We must do something to stop erosion in our nation or we will sure see it a weaker nation than it is today. If the land perish, how shall man survive.

SAVING FARM SEEDS

May we call attention to the farmers who have any grass or clover seed, the importance of saving them for planting purposes.

The indications are now that the price of grass and clover seed will be twice as much next season as they were this.

Where orchard grass seed can be saved the hay will be worth just as much after it has been run through a threshing machine as it is to mow and shock in the field and lose all the seed.

ORGANIZATION MEETINGS

Since the signup will close June 20, the next step is to reorganize the soil conservation farmers. This applies to all farmers who have filled in work sheets previously or will fill in work sheets at organization meetings.

Here is a schedule of meetings for next week. The remainder of meetings for county will be published in the next issue of the News-Record. Try to arrange to attend your township meeting in order to take part in the reorganization.
