Seed of carpot grass is easily har-vested by mowing and thrashing. Large areas of pure or nearly pure carpot grass occur in several regions in the South.

Up to the present the quantity of seed produced has been only a frac-tion of that required. A comprehen-tive plan has been devised to increase routly the harvesting of seed, as the sutstanding need to stimulate a much preater use of carpet grass for pas-iure is an ample seed supply. Complete information about Car-pet Grass is published in Farmers sulletin 1130, U. S. Department of Agriculture.

NEW BERN, N. C.

WILMINGTON, N. C.

SAVE WATER

TO THE CITIZENS OF THE TOWN OF DUNN:

Your very serious attention is called to the gravity of the situation of our present WATER SUPPLY. Since the advent of warm weather the Superintendent of Water Works has found it impossible to satisfactorily meet the demands made for water with the present well.

The consumption of water in the town has practically doubled within the past year or so while the supply from the present well has gradually diminished until at the present time it is only furnishing about one-half of the normal supply. This is a very critical condition and calls for the prompt co-operation of every property owner and user of water to help us remedy as best we can until a new source of supply is found. We are informed by the contractors that it will probably be from four to six months before the well now in process of boring can be completed. even if a sufficient flow of water is procured.

In view of this alarming situation we respectfully ask that at present you confine yourselves to the use of water that is absolutely essential and necessary only, and the use of lawn sprinklers be discontinued until the situation can be improved.

With your co-operation, it is our opinion that we can get along without any grave danger. Unless you do co-operate with us we will be forced to limit the use of water to a few hours daily.

Respectfully submitted,

J. L. WADE, Mayor.

6 14 1920.
