SEEING IS BELIEVING. Among the numerous "Doubting Thomases" who form a part of the population, there are some, here and there, who think that the number of automobile drivers killed or injured at railroad crossings is exaggerated. To all such we make the suggestion that they might keep a record for a month or so and see what figures will show.

Of course, outside of some big disasters, the accounts of crossing accidents are not published far from the place where they happen so you would miss a majority of the cases all over the country. Through the newspapers that you read you will get a lot of information quite enough to start a record. There are clipping bureaus in the large cities that could furnish you a flood of such items. Seeing is believing, so make a record and study it. Statistics show that 3,000 automobiles were struck at grade crossings in this country last year. In these accidents over 2,000 men, women and children were killed and over 3,000 others were injured. In dozens of instances whole families, numbering from four to six were wiped out as completely as though a cyclone had struck them. A cyclone comes without warning from an unexpected quarter. A train of cars always comes along a permanent track, so you know where to find it. And yet, this very day, more than one driver, somewhere, will heedlessly drive onto the tracks, without looking or listening and then a rushing train will demolish his car. In company with wife and children he will meet sudden death. A little thought—a little serious attention that you give to your business affairs, would save you from a fate. DO YOU STOP, LOOK AND LISTEN before crossing Railroad tracks?
