

## Hazelwood News

### CAPT. COLTHRUP ADDRESSES BOOSTER CLUB

Capt. Butham Colthrop, of England, was the principal speaker at the regular monthly meeting of the Hazelwood Booster Club Thursday evening at the Hut. Capt. Colthrop was born in England and has lived in sixteen different countries of the world. He is a son-in-law of Mr. Reuben B. Robertson, of Asheville. He used as his topic for the evening "The Conditions in India Today." The address was very interesting and was enjoyed very much by the twenty-five Boosters who were present. The president, Dr. R. S. Roberson, was in charge of the meeting. Dinner was served by the ladies of the Presbyterian church.

### JUST ARRIVED

Mr. and Mrs. Kenneth Scruggs announce the birth of a daughter, Wednesday, May 8, Barbara Frances. Mrs. Cruggs is the former Miss Thelma Palmer.

Born to Mr. and Mrs. John Scates, Sunday, May 12 a daughter, Carolyn Jewel.

### MOTHER'S DAY IS OBSERVED AT BAPTIST CHURCH

A very brief but impressive Mother's Day program was presented by members of the Baptist Sunday school. The program was divided into two parts "Our Hospital," and "Our Mothers." Very interesting information was given in regard to the Baptist hospital at Winston Salem. Musical numbers were rendered in honor of the mothers. This program was followed by the sermon by the pastor, Rev. J. M. Woodard, who used as his topic "A Model Mother."

### MISSIONARY SOCIETY TO MEET

The Woman's Missionary Society will hold its regular circle meetings Thursday afternoon at 2:30 o'clock at the home of Miss Lethia Knight. A large attendance is very much desired as there are very important business matters to come before the ladies.

### HAZELWOOD JUNIORS WIN FROM CANTON JUNIORS

The Hazelwood Juniors won their fifth victory of the season from the Canton Juniors on the Canton ground May 11 by the score of 10-7. Byrd pitching for the Hazelwood Juniors allowed only five scattered hits, while his mates were collected 10. This game was the 5th won by the Juniors. One game has been postponed, this being at Sylva, May 13. The first game of a double header at Sylva, May 10.

The Juniors will play at home Saturday, May 18 and everyone is invited.

Byrd pitched for Hazelwood Juniors in 1935. He was born in Sylva, N. C. He is now a member of the Hazelwood Juniors.

Byrd pitched for Hazelwood Juniors in 1935. He was born in Sylva, N. C. He is now a member of the Hazelwood Juniors.

accompanied home by Mrs. Dempsey and the children.

Mr. Vinson McElroy spent two days of last week in Lenoir at the home of his sister Mrs. C. S. Benfield and Mr. Benfield.

Mr. and Mrs. C. S. Davis have as their guest this week Mrs. R. P. Brown, of Pittsburg, Penn.

Miss Alice Capps of Asheville spent the week-end with Miss Nell Mehaffey. Mr. Oscar Knight is still confined to his home on account of a broken leg.

Rev. J. M. Woodard was the principal speaker at a Mother's Day program given at the Dick's Creek Baptist church Sunday afternoon.

## Letter Carriers To Meet On 30th At Lake Junaluska

Approximately 50 rural letter carriers, their wives and families are expected to meet at Lake Junaluska on Thursday, May 30th, for their annual meeting. The meeting is of the North Carolina Rural Letter Carriers Association.

James G. Rice, of Candler, is president of the organization and announced that an enjoyable day would be spent, and also a profitable one. The ladies auxiliary of the organization will meet at the same time.

Rev. Paul Hardin, Jr., pastor of the Methodist church here, will be one of the speakers of the day.

The unit includes the district composed of Buncombe, Madison, Haywood, Jackson, Swain, Macon, and Transylvania counties.

As is the regular custom, a picnic dinner will be served by the wives of the carriers. A special invitation is extended to all patrons of the letter carriers to attend.

## HITCH-HIKING DECLARED ILLEGAL IN STATESVILLE

STATESVILLE.—The board of aldermen, Statesville, have adopted an anti-hitch-hiking ordinance, making it unlawful for any one within the city limits to solicit or "bum" rides. The penalty for hitch-hiking inside the town limits is a fine not exceeding \$50 or imprisonment for a period not exceeding 30 days. The new ordinance is now in effect.

# COUNTY AGENT W. D. SMITH'S column

Indications are now that our potato storage house will be under construction at an early date. Nearly every farmer in Haywood County has planted good potato seed this year. The plants are growing good, and we are ready to work with those who want to produce seed potatoes. By all means list your name with the county agent if you want him to inspect your field. It is impossible to certify seed without field inspection. We are ready to do our part, but we will have to have your cooperation to put the job over.

Our creamery is coming along nicely but needs more cream. How about milking a few cows and trying it out for awhile? For the past four weeks the creamery has turned out more than 1000 pounds of butter each week. It would rather be turning out 2000 pounds each week. What do you say? Let's see if we can't fool that little plant? It has only been in operation one year this month. The county agent more than a year ago told these boys that it would take until the summer of 1935 to get butter production up to 1000 pounds per week. This is one time the county agent missed his guess because many people in Haywood County have already discovered that it pays to milk cows and market through the creamery.

Our terracing program is getting under way. A few more big floods on our plowed hillsides will convince some more of us that we have not to do something about it. Sooner or later every farmer if he is going to stay in the game, must an lyze his farm and think through it in terms of crop lands, pasture lands, and woods. Each of these three divisions must have the proper management. A good permanent sod in the pasture will hold water; but it is going to be cut out in a few months. A good permanent sod in the year on our cultivated areas, and terracing on the hillsides to keep the soil from washing. The county agent, after cooperation with the TTA and other agencies, is ready to help those who are ready to go into a question of the proper farm management to set up. We are not arguing with any one whether to terrace or not to terrace. We notice that some think that the washed away or eroded places should be terraced. But why wait until we have to abandon the rest of land before doing something about it? Many farmers in this county are seeing it is wiser to keep plant food in the soil, where nature placed it.

From time to time we are asked when is the best time to plow under crimson clover. This legume carries its greatest amount of plant food just when the first beans begin to show. Another advantage in plowing it under at this time is that dewy takes place more rapidly when the crop is plowed under after maturity or when the plants are in full bloom it is slow in decay and loses much of its value. Most of our farmers, unfortunately, wait too late to plow this crop under.

Some of our people have the idea that planting legume crops like soy beans is a soil improvement. This is not true unless the soil is inoculated or unless the seed is inoculated before planting. This is due to the fact that bacteria must be on the roots to enable the plant to take nitrogen from the air and store it in the nodules of the plant. Many of our farmers do not use inoculated materials. It is not good farm practice to plant soy beans without inoculating them, unless your soil is already inoculated.

In going over the county the county agent has discovered some mighty good farmers. A few days ago a farmer was discovered who has eliminated most all of the noxious weeds from his farm. It would be hard to see any morning glories or cockle burrs on his place. This farmer has accomplished this by roguing his field on rainy days and at other times when he could not work with the general routine. We noticed also that this farmer does not allow other grains to mature in his wheat, as he is roguing out the few plants of rye and barley. This farmer believes in pure seeds. How many farmers in Haywood County are growing all of their crops from certified seed or from seed of known origin? How many farmers have pure bred poultry and all livestock? The county agent stopped at a place a few days ago where there was only one breed of chickens—this about 125 barred rock hens. Why can we not start a campaign in this county to eliminate all scrub and mongrel breeds from our farms? It does not cost any more to grow the best.

We are expecting to hold a county fair this fall about Oct. 1. We want to have the biggest agriculture and livestock exhibits ever shown in this county. We want every exhibit to be exhibited by the owner and producer. Watch for more definite and detailed announcements at an early date.

Mr. John Best and Mr. D. Reeves Noland are in Washington representing this county at the meeting of farmers in the interest of the continuance of the AAA program. The farmers of Haywood County are not willing to throw this program over, and go back to the old ordeal. Mr. Noland is on the Advisory Council representing North Carolina in the Burley program. Mr. Best was sent to Washington by tobacco growers who contributed money to defray his expenses.

## SUPPLEMENTAL PASTURES ADD TO FARMING PROFIT

A good pasture is one of the simplest ways of making money on the farm. Many farmers have gone a step farther, according to the United States Department of Agriculture, and added to their profits with supplemental pastures which lengthen the grazing season at both ends and bolster it in the middle. They have planted Sudan grass, sweet clover, lespedeza, Soybeans, cow peas, and the small grains. The winter grains provide good grazing in the early spring. The Sudan grass and the legumes are available at any time during the summer when permanent pastures need a rest. All may be used for hay if not needed for pasture.

While adding to their profits with supplemental pastures, these farmers are taking the first step in "back to grass." More than 25,000,000 acres which have been producing corn, cotton, wheat, and tobacco will be available this year for soil-building, erosion-preventing, and wood-controlling hay and pasture crops. The acreage of supplemental pastures need be only one-fourth to one-third the acreage of permanent pasture because of their greater carrying capacity for short periods.

Permanent pastures are at their best for a month or more in the early summer. After that the grass decreases in quantity and quality, particularly in dry years. Temporary pastures of Sudan grass or legumes usually are at their best in late summer.

Dairy farmers should give consideration to this question. Grow feed or buy feeds in dry periods—which?

A letter from the county agent to the club boys and girls of the county: Waynesville, N. C., May 9, 1935.

Dear Club Members: School days are over for this year; what do you say, we are ready to help you put over a good job of 4-H Club work if you are ready? Meet us in your home community according to the following schedule: Thursday, May 16—Crouse: Bethel, 9:00 A. M. Cecil, 10:00 A. M. Cruso, 11:00 A. M. Morning Star, 1:30 P. M. Beaverdam, 2:30 P. M. Smith: Crabtree, 9:00 A. M.

## 17-Year Locust To Invade This Area

Department of Agriculture Says This Section May Expect Return Of Insect During This Year

WASHINGTON.—Western North Carolina may as well make preparations now for the return this year of the "17-year locust," according to the department of agriculture.

His shrill, discordant piping soon will be heard, but only for a short time.

The periodical cicada, as the 17-year locust is technically known, is one of America's strangest bugs, says J. A. Hyslop of the department. It spends most of its life—17 years in the North and 13 years in the South—practically motionless in an earthen cell, sucking at a rootlet of a tree or shrub. At the end of this period it changes into the winged insect form and lives for about a month—usually June—in the sunlight and fresh air.

The department has each breed labeled and located, and, if it will aid any in allaying the ear-splitting racket which they bring, western North Carolinians may be informed that their particular breed is breed IX. Each breed—there are more than 20—has appeared on a regular schedule every 17, or 13 years.

Rock Spring, 10:00 A. M. Fines Creek, 11:30 A. M. Iron Duff, 1:30 P. M. Big Branch, 3:00 P. M. Friday, May 17—Saunook, 9:00 A. M. Hemphill, 1:00 P. M. Rock Hill, 2:34 P. M.

Be on time and we will not keep you more than thirty minutes. We are planning a club camp and other things. The only way for you to know what is going on is to be present. Help mother and dad over times with their work in order to be ready for this time off to meet with the club.

the Pilgrim Fathers first came in the New England States. It was granted that it was another time of the pharaohs. The locusts sent by an angry God. The cicada, however, is not very close relative of the locust of Egypt. The grasshopper invaded the northwest in 1874. The never-ceasing roar of the 17-year cicada makes known is the composite of the millions of male members of the breed's appointed time of up, for the songs of the cicada overlap, one songster always ready to carry on as another for breath.

All the din is caused by the vibration of two tough little drum-tillages beneath the wings of the female. The female is provided with special instruments, but which remains mute, she does all the damage. The eggs stick to the trees, shrubs and plants of all sorts of general twig structure, especially injurious to large trees, but hard on fruit trees and astrous to young trees and stock.

NOT DANGEROUS TO MAN.—The insect is not dangerous to man, although it probably annoys a person with its long sucking proboscis. It does not even make an attempt to defend itself when people or birds feed on it. Some species has suffered heavy losses. Some breeds, entomologists have been entirely wiped out, weakening as a weakened no chance against birds.

At the end of their brief ground, the periodical cicada showering the ground with wings and dismembered bodies larvae soon hatch from the quiet to earth, burrow and nourishing its ocell and their subterranean cell. The rest gradually growing for years.
