Farm Problems And Answers

Question: Is the appearance of poultry mash any entext as to the 4 P. M. Evensong in Baisam church, quality? Answer: No. The value of poul-

try mash cannot be determined by he appearance of texture. At one was believed that a finely ground mash was more easily gested but experience has shown hat, in some cases, the regrinding is done to hide inferiority in quality Certain mash ingredients, such a wheat bran should not be ground too The flakes of bran in the mix ure tends to produce bulkiness which and digestion. Check carefully on he ingreshents and see that sufficient mikiness is allowed.

Question: What size can is best or putting up fruits and vegetables n home use

Answer: The number two or three the size most generally used for tome canning. Only experienced can-ters should use the No. 10 cans as it is difficult to sterilize so large a filled container. Corn, squash, peas, or pumpkin should never be put up in a No. 10 can. Where one has the necessary experience, string beans, tomatoes, soup mixtures, peaches, pears and blackberries may be successfully canned in these large containers.
