

BUILDING AND THE HOME

STORM WINDOWS

The installation of storm windows on houses in northern climes will aid materially in decreasing heat losses. It is estimated that such installations properly adjusted will save as much as 30 per cent of heat loss, with a consequent saving in fuel costs.

Check Your Home Now For Needed Repairs

Here are the vital points which make all the difference between an old house and a modern home. Look over your property now with a critical eye. Prompt attention to repairs will help maintain property value and prevent large "emergency" bills later on. Funds with which to repair, alter, or improve properties may be obtained in amounts up to \$10,000 from private financial institutions qualified under the Federal Housing Administration's Property Improvement Credit Plan.

The following numbers and list of items correspond to the numbers in the cross-section view of the home above: (1) Exterior trim; (2) attic ventilation, attic room; (3) flashings; (4) chimney masonry, cap, etc.; (5) roof; (6) rafters, studding; (7) roof sheathing; (8) dormers; (9) weather-stripping; (10) lath; (11) garage, tool space, workshop, etc.; (12) walks and drives; (13) exterior walls; (14) sheathing and insulation; (15) window frames and sash; (16) blinds, shutters; (17) porch bench, transom, door column, etc.; (18) steps, brick, wood, concrete, tile, etc.; (19) drain tile; (20) footing; (21) foundation walls; (22) basement floor; (23) recreation room, laundry, workshop, etc.; (24) heating plant; (25) grading and landscaping; (26) gutters, downspouts; (27) a modern kitchen; (28) built-in bookshelves, cabinets, cupboards, etc.; (29) joists and subflooring; (30) fireplace, mantel, flue; (31) paint, wallpaper, interior decoration; (32) interior trim; (33) stairways, treads, rails, balusters, etc.; (34) electric fixtures; (35) doors, hardware; (36) plumbing and fixtures; (37) outlets and wiring; (38) flooring, finished lumber, tile, linoleum, etc.; (39) wallboard, plaster, etc.; (40) closet space, shelves, etc.

Problems About

:-: HOMES :-:

Q. I am going to build some shelves in the kitchen. What depth would be most serviceable?

A. Dish shelves should be not less than 10 inches in depth. For groceries and canned goods the shelves may be narrower, six or seven-inch shelves for packaged groceries and even four-inch shelves for canned goods.

Q. Is there anything I can do to correct sagging shutters.

A. Try placing right-angle braces at the corners.

Q. We have a stone sidewalk, and the stones are peeling. What can be done to stop this condition?

A. There is no satisfactory remedy for this condition.

Q. My enamel kitchen sink has chipped in places, and rust streaks form where the metal is exposed. What can be done to cure this?

A. This can be cured temporarily by applying one of the quick-drying enamels, but cannot be relied on as a permanent solution.

Q. The furnace smoke-pipe in our house is close to the floor beams. Should I protect the beams?

A. Yes. Get some sheets of asbestos board, sheet metal, or other incombustible material and nail across the beams above the pipe.

Q. Would an outside stairway to the cellar of my house be practical?

A. Under certain conditions, yes. It is suggested that you consult an experienced contractor and, if possible, an architect before building the stairway.

Q. Is it possible to use stone as a veneer on a wooden frame?

A. Yes. Be sure the veneer is securely tied to the frame by non-corrosive metal clips and the foundation is of adequate width to carry the load.

BASEMENT ROOM HAS MANY USES IN MODERN HOME

The basement of a home is receiving more attention now than ever before. In years past it was only a place for waste materials and broken furniture, with the furnace providing virtually the only reason for its existence.

Today the basement is becoming one of the most popular rooms in a home, due to alterations which amount to the addition of a room. A "rumpus room" for the children, an entertainment through the judicious use of

where the floor materials on each side of the door are not the same, or where the direction of the flooring boards is different on each side of the door. In such cases a "saddle," or sill, is used to cover the junction between the flooring material. If the floors are carefully laid, however, saddles may be omitted in the latter case.

Q. What is the best method for building a terrace?

A. It is well to lay a bed of hard cinders or gravel or broken stone underneath as a drainage bed. This will also serve as a cushion for frost. In this case the terrace is much less apt to heave in freezing weather. On top of this flagstones, brick or tile may be placed. Any of these materials will be serviceable and attractive. Concrete, plain or scored, may likewise be used.

a recreational place for the family are now feasible in the basement through the judicious modernization.

Every town has a few people think they are so good that sinning if they do it.
