Poultry

(Continued from Page 1)

Another extension specialist on the program, W. C. Mills, suggested that county producers consider raising of turkeys as a method to increase their income from poultry.

He said that the opportunity in the field is good, and has proved to be a sound business when operated efficiently.

Mr. Mills explained that raising turkeys is a six-months operation, and usually involves more risk than raising chickens. He said it requires from \$3.50 to \$4.00 to raise a turkey but added that the bird sometimes brings as high as from one to two dollars profit.

He pointed out that two counties in North Carolina realize more than a million and a quarter dollars each year from turkeys, and four more get a half million annually.

Mr. Mills expressed the belief that there is room in Haywood County for from one to three turkey producers, producing for local markets.

He recommended flocks of not less than 1,000 birds grown in confinement, and suggested raising Beltsville Small White, Broad White, or Heavy Bronze varieties.

The specialist added that there are currently 1,250,000 turkeys grown each year in North Carolina, and approximately 76,000,000 in the United States.

County Agent Virgil L. Holloway presided at the meeting Thursday and opened the discussion by citing figures that show the average income per farm family in Haywood County is only \$1,200.

He said there are "tremendous possibilities" in the poultry industry, but warned against rushing into any type of enterprise without careful advance planning.

"This is no time to make mistakes," he commented.

He said, "We first need to set up goals and a long-range program for the poultry industry, but unless we take action later, we aren't doing ourselves or the county any good."

The county agent concluded his remarks with the assertion: "Somebody somewhere will do the job in the poultry industry. The question is: will we get our share here?"

Among the producers at the meeting were Tom Brummitt, a hatching egg producer and chairman of the poultry committee of the Haywood County Agricultural Advisory Commission, and representatives of the other two poultry enterprises—including Fred Caldwell of Bellwood, broiler grower, and Lee Howell of Jonathan Creek, commercial egg producer.

Expanded Foreign Market Sought For U.S. Dairymen

By JANE EADS

WASHINGTON—Encouraging the young and old of Thailand to eat ice cream and drink chocolate milk seems an easy enough assignment to Dorothy McCann, a representative of this country's dairy industry. She is heading for Bangkok for an 18-month stay.

This, however, is only a part of a long-range project to increase Thailand's milk supply and improve the diet of the people while helping create a new foreign market for United States dairy products, especially those used in the milk-recombining process. Recombined milk is made of nonfat dry milk, butterfat and purified water. It contains all of the ingredients and is comparable to fresh whole milk.

Mrs. McCann, new executive director for the dairy project, is working as industry cooperater with the Department of Agriculture's Foreign Agricultural Service.

Thailand, with American assistance, has built a milk-recombining plant which will turn out thousands of gallons of milk and ice cream daily as well as whole milk. Part of Mrs. McCann's job is to show the Thais how to take advantage of these products. To launch the project, the dairies and the United States Department of Commerce will have a dairy exhibit at Bangkok's Constitution Fair in December.

Samples of milk and ice cream will be passed out to all visitors. The labels will read: "From the People of America to the People of Thailand."

The main source of Thai milk has been from the water buffalo. Mrs. McCann, a native Chicagoan, told me: "These give a rich milk, often in greater quantity than the cow, but without facilities for transportation from the fertile valleys to the heavily populated cities, little of it reaches the urban market. Seasonal pasture failures result also in temporary shortages."

Mrs. McCann says she has no qualms about the popularity of the milk products to be promoted in the international field. "There's little difference between the children of Thai and those clustered around the ice cream truck on America's Main Street corners," she says. "They all love milk and they all love ice cream and chocolate milk."

crosswise. Core. Place in baking pan. Combine remaining ingredients in small saucepan and cook over low heat, stirring constantly until jelly has melted and mixture is smooth. Bake in 375 deg. F. oven 45 minutes or until tender. (Makes 6 servings.)

deviled ham biscuits. 2 C sifted flour. 3 tsp baking powder. 1/2 tsp salt. 1/3 C butter or margarine. 3/4 C milk. 1 (3-oz) can deviled ham. Sift flour, baking powder and salt together. Cut in butter. Add milk and mix lightly. Turn dough out on floured cloth and roll out 1/2-inch thick. Cut twelve 2 1/2-inch rounds. Press thumb in center of 6 biscuits and fill hollows with deviled ham. Top with remaining 6 biscuits. Bake in a hot oven (425 deg. F.) 12 to 15 minutes. Serve with creamed eggs and mushrooms. (Makes 6 servings.)

Baked Half Apples. 3 medium baking apples. 3 T. butter or margarine. 1 1/2 T. water. 3 T. currant or grape jelly. Wash apples and cut in half.

MORE ABOUT

No War

(Continued from page 1)

dictators in trouble have some times gone to war to secure the backing of their peoples. That historical fact brings some possibility that Krushchev, the drunkard, might push the wrong button and plunge us into war," the General continued.

General Eichelberger said he was sorry that France and Britain went into the Canal Zone as they did without consulting the United States.

The retired general branded Nasser as a thief and liar, and pointed out Nasser "stole Britain's life-line by taking over the Suez Canal."

He continued by saying, "It is too bad that the lack of foresight did not prompt England from going in earlier."

"England and France do not have the power to protect themselves. There was nothing else President Eisenhower could do but fall back on the United Nations, and by so doing, has increased the prestige of the United States with the neutralist nations."

"The fact remains, England is still our number one ally. And the present situation might be the downfall of Prime Minister Anthony Eden."

General Eichelberger said he often felt that it was too bad that Hitler was not allowed to go on and lick the Russians, and then for the Allies to have overcome Hitler. The former commander of the South Pacific feels that Russia could possibly put in 200 divisions in Hungary against about 100 for the United States, England and France.

"We can't deny the power of Russia, it is believed she has some 400 subs. Just think of what Hitler did to England with about 100 subs. Russia has a large navy, and no question of it being the second in power in the world."

"To the Arab leaders, however, Nasser's actions in the theft of the Canal has been against the interests of the Arab states."

"Before our recent troubles, about 1,200,000 barrels of oil passed through the canal each day, and an additional 800,000 barrels through the pipelines. This oil has been of absolute necessity for the economy of Western Europe. Their manufacturing plants have shifted largely from coal to oil. At present, only one pipeline is open, the one from Saudi Arabia through Jordan. It carries about 300,000 barrels daily. The rest must go to Europe around the Cape of Good Hope or come from the western hemisphere."

"The oil of the Middle East is a great stake in international matters, for there we find 75 per cent of the world's oil reserves."

"You have heard a lot this fall about stopping the testing of the hydrogen bomb but if we could suddenly do away with all nuclear weapons, Western Europe would find itself with about ten allied divisions facing about 200 Russian divisions. Fortunately, the Russian satellite armies can no longer be considered an element of strength to the Russians. They are a weakness."

"The Kremlin has doubtless many times considered the pros and cons of warfare with the free world and I believe, personally, that the specter of the Kaiser sailing wood at Dorn and Hitler killing himself in Berlin will force Russia to realize that one cannot engage in warfare with the United States with impunity."

"We have a President who is dedicated to peace—I believe he'll win out."

Chickens Get Eggs

POLK, Neb. (AP)—A three-year-old youngster here broke over 100 eggs by hitting them against the chicken house wall.

He told Mom: "The chickens hadn't had any breakfast and they wanted some."

Vaults to Victory

Industry

(Continued from page 1)

state can't do it all, but will render every bit of assistance possible to local areas."

To set up a long-range industrial program in the Waynesville area, Mr. Tucker said, the Industrial Development Corporation has been organized to (1) encourage and work for good community-industry relations with present plants here, and (2) to attract new industries.

To carry out that program, he explained, the council is ready to buy land and develop property for sale or lease to new industrial firms.

The organization also has gathered information, put out an industrial brochure, and has contacted number of firms interested in new plant sites, he added.

To illustrate the impact of a new plant or the expansion of an old plant on a community, Mr. Tucker disclosed that a U. S. Chamber of Commerce survey has shown that 100 new industrial jobs:

- 1. Creates 174 other jobs.
2. Increases the population 296.
3. Boosts retail sales by \$360,000.
4. Brings about the erection of four new stores.
5. Is responsible for 107 new car registrations.
6. Influences the installation of 70 new telephones.
7. Results in an over-all increase in income of \$590,000.

Mr. Tucker said that a shift in population, which started generally after World War II, has been noted to warmer climates "for more relaxed living."

"People—especially older ones and retired persons—are bitter about the long, severe winters of the North, and are moving south in great numbers."

This migration, he pointed out, has created new markets and consequently has brought about the building of new industries who seek to be nearer their expanded markets.

The thousands of industries which have moved to the South have found the following, Mr. Tucker said: (1) good labor, (2) lower operating costs, (3) lower taxes, and (4) higher productivity.

In his talk to the Lions, the Chamber executive particularly emphasized this point:

"Everyone here admits the necessity of attracting new industries to the Waynesville area, but we must realize that most of the other towns and cities in the U. S. are after these same plants."

"This is not a job for the few."

Border Tragedy

A HUNGARIAN woman stands weeping as she safely crossed the border into Austria only to discover that her husband, who was following her, had been nabbed by Soviet guards. The Russians have been imprisoning all refugees caught in their flight to freedom. (International)

Everybody must want new industries, and must work together to bring them here.

There are now more than 70 million licensed drivers of motor vehicles in the United States.
