Salmon River Area Will Be Explored

Gorge Surpasses Grand Canyon of the Colorado.

Washington.-The Salmon river canyon in Idaho, one of the largest primitive areas in the United States, with a gorge surpassing the Grand canyon of the Colorado in depth and steepness, will be explored and photographed soon by the Salmon river expedition of the National Geographic society, ac-cording to an announcement made by Vice President John Oliver La

The expedition personnel includes Philip J. Shenon and John C. Reed of the U. S. Geological survey; Maynard Owen Williams, staff rep-resentative of the National Geographic society; Robert Marshall, naturalist; D. Worth Clark, and two local boatmen.

Travel Upstream Impossible.

"The Salmon river, which winds through rugged central Idaho, has been truly designated the 'River of No Returns," the announce-ment continues. "The falls and roaring rapids of the swift stream, and the sheer cliffs and ruggedness of the canyon, make travel upstream impossible. Downstream navigation can be accomplished only in stout, flat-bottomed boats, reinforced to withstand numerous collisions with boulders in the rap-

ids and low falls, The source of the river is in the rugged sawtooth mountain range of southern Idaho. For many miles it flows north. About 20 miles be low the town of Salmon it turns westward to enter the main gorge. The Salmon river expedition will begin its exploration at Salmon early in October, working down the river through the main gorge to the lower gorge. The latter begins at Whitebird and extends about 50 miles to the junction of the Salmon and Snake rivers.

Subjects for Color Camera.

"The wildly beautiful main gorge of the Salmon river is one of the loneliest regions in the country. For 150 miles along a deep, twisting canyon the only settlement is an occasional cabin. The rushing torrent has cut through several thousand feet of lava flows and deep into older formations beneath. The canyon's great depth, 6,000 feet in places, permits scientific study of formations more than a mile below the original surface of the main body of granite rock.

"The walls of the canyon itself are brilliantly colorful. On Big Creek, in the canyon area, are ex-

First Chronometers Are Shown in London Museum

London.-Four of the famous chronometers made by John Harrison, which were the first instru-ments invented to solve the mariaer's problem of "finding the longitude" are on view at the Science museum at Kensington. They have been lent by the British admiralty. Harrison, according to the mu-

seum, was the first to strument capable of keeping sufficiently accurate time at sea, and it was with these same chronome ters that he won \$100,000 offered by the British government in 1714 for a method of determining a vessel's longitude to within an accuracy of 30 miles, at the end of a voyage to the West Indles.

In 1761 Harrison was successful. His fourth chronometer had aided in the navigation of a boat to Jamaica, and at the end of the voyage it was found to be in error by only five seconds, which corresponds to an error in longitude of one mile, He won the \$100,000, the final installment of the award being paid

The first three of Harrison' chronometers, which were valuable contributions to the science of navigation, were large clocks, each weighing 50 pounds. The one which won the prize, however, was small-

tensive but little known prehistorie picture writings that have

ot been studied.
"In addition, the forests and flow ers of the region are expected to provide excellent subjects for the olor camera. In the Salmon and the Clearwater mountains, bear, mountain goat, mountain sheep, deer, elk and moose roam far from the usual haunts of man. In addition to salmon, there are several varieties of fish, including the rare red fish trout.

"The Salmon river area has an interesting historical background, beginning with the Lewis-Clark expedition to the Northwest in 1805. Stories of Indian warfare, picturesque early-settlers and exciting gold rushes lend glamour to the region. Scenes of earlier gold rush days are again being re-enacted in this section of Idaho. The granite rock, known as Idaho Batholith, through which the Salmon river cuts its way, is similar to that of the Coeur d'Alene region, source of most of the state's mineral wealth."

Penny Wedges Wedding Ring; Hammer Is Used

Mansfield, Ohlo.-A hammer and chisel were part of the equipment Rev. Hayes M. Baker, Mansfield, used at a wedding. The minister asked for the ring, and a nervous bridegroom brought it forth, only to find a penny tightly wedged in it. The ceremony was delayed while Rev. Baker got a hammer and a chisel to knock the penny loose.

Model Soviet Plane Makes 7-Mile Flight

Moscow.—What is claimed to be a world record for flights by model airplanes was established by Valya Kupreichuk at a re-cent aviation show.

cent aviation show.

His miniature plane ascended to a height of 2,900 feet and was seen for 32 minutes. After this it was lost to view. The flier who took off to look for it found it two days later, undamaged, several miles from the starting point.

All Readers "Go Blind"

on Every Line of Type Minneapolis.—The eye "goes blind" at least three times while reading a line of type. Tests made with a camera developed by Dr. M. A. Tinker, of the University of Minnesota, showed that the average person's eye made about five little hops over each line and that the eye was blind for a fiftieth of a second between the hops. The best readers make three or four stops twelve times in covering a line of type.

Find Amphitheater of

Ancient Roman Times Budapest.—Parts of the palace of the first kings of Hungary were discovered at Esztergom and the spades of workmen later struck on the remnants of an amphitheater in Acquincum, the old Roman city that occupied the shore side of Buda-pest. The amphitheater covers a large area and its extension vies with that of the amphitheaters of Verona and Arles.

Execution Chamber Uses Two Methods

North Carolina Will Use Gas and Electricity.

Raleigh, N. C.-Newer than the gas-electric railway car is the gaselectric death chamber soon to be completed in North Carolina's central prison here.

The combination death house was designed by engineers of the state highway and public works commis-

stalled within the present octagonal

death chamber at the prison.

There will be a panel about three feet high and nine feet long, in front of double, shatter-proof plate glass, through which witnesses may watch the execution. The interior will be of bolted and welded steel plates.

The exterior will be covered with terra-cotta tile except for the glass observation windows.

A special walkway will connect the chamber with "death row." Two heavy doors, like refrigerator doors in this walkway will form an air lock and one door cannot be opened unless the other is closed.

A prisoner will be strapped into the chair, as in electrocutions, and a jar filled with hydrochloric acid. Directly above the jar will be a

rack containing five pellets of cyanide of potassium. After the doors are locked and sealed an electric. button will spill the pellets into

The first inhalations of the resulting cyanide-hydrochloric acid gas cause unconsciousness and death will follow almost immediately. Then an exhaust fan will drive the gas out through a special flue through the prison roof. The doors cannot be opened until the gas is exhausted.

tive sets for fall. A cable stitch is employed for the model shown. It's a topping good style worn with a skirt of checked woolen as pictured. In the other knitted outfit the effect of the vividly colorful striped and plaided jacket blouse in contrast to a deep-hued monotone skirt is heightened by the solid color belt which runs through wooden buckle that corresponds to large wooden buttons. The popular Ascot muffler appears here, as it will with great frequency in fall and knitted wear.

Pupils Are Guaranteed

Good-Looking Teachers Rockford, Ill.—Teachers who are ot comely need not apply to Superintendent William W. Ankenbrand for jobs. "All public school pupils are entitled to good-looking teach-ers," Ankenbrand said, indicating one look often is enough to disqual-
