

TOBACCO GROWERS

Here's Something of Interest TO YOU

STATEMENT

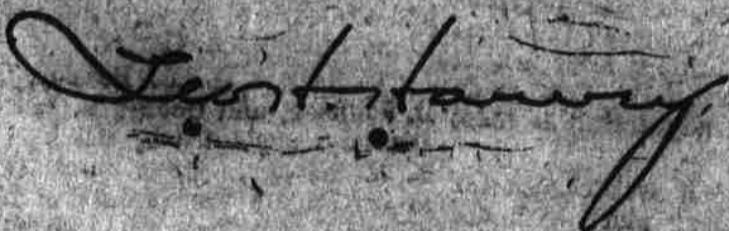

THE DIXIE TEST FARM at Wyee Fork, six miles southeast of Kinston, was instituted in 1938 in the interest of the tobacco growers of Eastern North Carolina. Its results are given out with the hope that the experience gained there will serve as a help to you in the buying of your fertilizer in the future.

Ten separate tests were made in the same field under similar conditions — three with our own brands of fertilizer and others with outstanding competitive brands. The results are shown by a chart under the statement and any member of our organization or any of our agents will be glad to explain that chart to you in detail.

All tests were made under the supervision of Mr. C. F. Graves, of Kinston, and we vouch for the accuracy and truthfulness of what these tests reveal.

Sixty six years of experience in the use and sale of fertilizers has gone into the making of DIXIE and the result is a premium fertilizer at a regular price.

How Dixie Fertilizers Compare With Competitive Brands

NOTE.—THE ABOVE CHART SERVES TO ILLUSTRATE THE RESULTS OF THE DIXIE TEST FARM. TEN TESTS WERE MADE, EACH COVERING ONE ACRE OF TOBACCO AND ON EACH ARE DIFFERENT FERTILIZER WAS USED.

EACH TEST WAS KEPT SEPARATE, FROM THE FIELD TO THE WAREHOUSE FLOOR, AND THE WAREHOUSE BILLS ACCURATELY RECORDED. ON EACH TEST 1,000 LBS. OF FERTILIZER WAS USED WITHOUT A SIDE DRESSER OF ANY KIND. ALL TOBACCO WAS SET OUT, CULTIVATED, HOUSED, CURED AND GRADED BY THE SAME PEOPLE AND AS NEARLY UNDER THE SAME CONDITIONS AS POSSIBLE.

THESE BRANDS OF DIXIE FERTILIZERS WERE USED AND THESE BRANDS LED THE ENTIRE TEST IN DOLLARS PER ACRE, THE THING IN WHICH EVERY TOBACCO GROWER IS MOST VITALLY INTERESTED.
