Cattle, Lambs Bring High Prices

Prices for well-finished cattle and lambs are likely to continue near present levels for the next few months, according to L. I. Case, beef cattle and sheep specialist for the State College Extension Service.

Prices farmers receive for hogs are expected to go down some as they usually do during the fall and winter months. But even with usual decline, hog prices are expected to average at least as high as a year ago.

Many sections of North Carolina produced a bumper crop of corn this year, Case said. Therefore, with prospects for lower corn prices and a relatively high level of hog prices, the corn-hog price ratio will be favorable for swine feeding and production during the next few months.

The improved feed-grain situation also points to an increase in the number of cattle and lambs fed this year, the extension specialist declared.

The outlook for sheep and lambs has changed but little during the past month. Marketings will be larger this fall than in the past summer, but the effect of these increased marketings on prices will be offset largely by an expected strong demand for feeder lambs in the Corn Belt.

In mid-September cattle prices reached the highest level in about 17 years because of the marked shortage of grain-fed cattle in the slaughter supply, Case pointed out. Prices of well-finished cattle are expected to continue relatively high, or at least until increased supplies of grain-fed cattle become available next winter and spring.
