

# Weekly War Ration Round-Up

**COUPONS**—In 17 states of Eastern shortage area A-6 coupons are now valid. In states outside that area A-7 coupons are valid through Sept. 21. B and C coupons expire according to dates on individual books. All gasoline coupons in possession of car owners must be endorsed with the owner's license number and state of registration.

**FUEL OIL**—Period 5 coupons in old rations remains valid through Sept. 30. Period 1 coupons in new rations are valid now. Occupants of oil heated homes are urged to return their applications for next year's fuel oil to their ration boards promptly and when issued new rations to place orders with their dealers for unmer fill-ups.

**SUGAR**—Stamp No. 14 good for five pounds through Oct. Stamps Nos. 15-16 are good for 5 pounds each for home canning through Oct. 31. Housewives may apply to their local board for more if necessary.

**SHOES**—Stamp No. 18 (1 pair) is valid through Oct. 31.

**STOVES**—Consumer purchases of rationed stoves must be made with a certificate obtained at local War Price and Rationing Board.

**MEAT, ETC.**—Red stamps X and Y valid through Oct. 2. Z becomes valid Sept. 5th, and remains through Oct. 2nd.

**PROCESSED FOODS**—Blue stamps R, S, and T remain valid through Sept. 20. U, V, and W became valid Sept. 1 and remain through Oct. 20.

**HERSHEY SHOWS ORDER OF INDUCTION.**

"The selection of men needed for the armed forces and the deferment of men required for agriculture, war production, and supporting activities are much more difficult than in the days when we had ample men from which to choose," said Major General Lewis B. Hershey, Director of Selective Service, in a recent letter to local boards. He said available men will be called for induction in the following order: (1) single men without dependents; (2) single men with collateral dependents; (3) married men without children; (4) men with children (nondeferable activities and occupations); (5) men with children.

**SMALL ENGINES TO FARMERS**—Distribution of about 37,000 air and liquid cooled internal combustion engines of 20 h.p. and under will be controlled by County Farm Rationing Committees. Preference rating certificates will be issued to farmers or operators of farm machinery for hire, based on the need for the engine in essential production of crops, livestock and livestock products, poultry and eggs, and bees. When the farmer receives such a preference rating certificate, he can take it to his local dealer and buy the engine.

**FARM HELP FROM LATE AMERICA**

A total of 57,489 workers from Mexico, Jamaica and the Bahama Islands have come to this country for agricultural employment. Marvin Jones, War Food Administrator, recently praised the ability of these workers and described their efforts as being of utmost importance to the production of food and fiber for war needs. Jamaicans and Bahamians have been employed largely in East Coast states and the Middle West. Mexican Nationals have been employed in agriculture in 12 Western states.

The workers have come into this country to relieve farm labor shortages in critical areas. When

the need for their services has passed, they will be returned to their home countries.

### Best Prices Paid

#### For Quality Eggs

North Carolina eggs should reach the market in the best possible condition because high quality eggs bring the best prices.

There are several fundamental rules to follow in producing high quality eggs.

"Proper production methods should include laying stock, bred for good egg production, free of disease, properly fed and housed. Together with good sanitation and proper care of eggs after they are laid."

High grade eggs should weigh 24 ounces per dozen, have a good shell texture, be reasonably free of watery whites, and otherwise possess good internal quality.

"It is important that the flock be properly fed on a balanced ration, since the egg is manufactured from the food given the bird."

Proper housing and equipment is needed to avoid dirty eggs. Clean eggs are not only in demand by the consumer but also by the egg drying plants."

The poultry specialist advises laying eggs is between 40 and 50 degrees. The best temperature for storage is below 28 degrees because of the danger of freezing. In summer the temperature should not go above 68 degrees for fertile eggs.

"Every farm, which produces any considerable number of eggs, should have a specially prepared egg cellar or storage room," the specialist says.

### State College Answers

#### Timely Farm Questions

Question: Should I cull my laying flock heavy or light this fall?  
Answer: Because of the shortage of feeds, particularly the proteins, you should cull your flock thoroughly this fall and remove all non-

### Pass the Ammunition!

Eager hands reach out to the Aviation Ordnance Mate loading machine gun bullets into the U. S. Navy Beautiful dive-bomber. Every time the guns spit 1,000 of these steel-piercing bullets it's taken \$6.00 in War Stamps to pay for it. Turn your stamps into a War Bond today and keep that steel ribbon feeding our planes.

U. S. Navy Photo

layers. During the coming year every effort should be made to get the greatest number of eggs from the feed which is available.

Question: What do they make out of the pulpwood which I am cutting in my spare time to help in the war effort?

Answer: Your pulpwood will go into fiberboard, boxes, and paper containers to ship supplies of all kinds to our armed forces, says R. W. Graeber, in charge of Forestry Extension at State College. He also says that your pulpwood goes into medical supplies, photographic film, plastics, smokeless powder, rayon for parachutes and medical dressings. A cord of wood from your farm can be made into powder to fire two rounds of a 16 inch naval gun.

Question: What is the best method of sowing small grains?  
Answer: The drill is by far the best for sowing small grains.

Less seed are needed and there is a more even distribution of seed. They are covered from 1 to 1-2 inches deep, which gives more satisfactory germination and permits deep rooting of the plants. These deeper roots hold the plants in place when freezing "heaves" the topsoil and this helps prevent winter killing. Where grain is sown broadcast, it should be covered with a section harrow. If a roller or cultipacker follows the section harrow, the seed bed is firm and a better stand is obtained.

### State College Hints

#### To Farm Homemakers

By Ruth Current  
N. C. State College

If you're looking for a good place to use honey, you don't have to go any farther than your breakfast table. Hot biscuits, dripping with honey have been a morning delight since way back. Honey can also be used to sweeten fruits, beverages, and cereals. Honey sauce, with nuts or orange juice and orange peel, is good on ice-cream. For a sandwich filling, use honey which has been creamed with butter, nuts, cheese, or peanut butter.

Many cooks sometimes use honey to give their old recipes new life and flavor. When you cook with honey, remember a part of it is water. You can't substitute honey for sugar, measure for measure, without making some other change in the recipe. For one thing, you'll have to use less liquid than the original recipe calls for.

For honey cakes and quick breads, mix the honey with the liquid called for in the recipe. Also, be sure to bake at the lowest temperature possible, so the honey won't scorch.

For gingerbread, brown bread and steamed puddings, you can use honey in place of molasses. In that case you can substitute measure for measure. If you use honey, be sure to omit the soda that you would use with molasses.

Honey takes up moisture as it stands. That may not be so good with some candies and frostings. But it helps to keep your fruit cakes and steamed puddings moist.

Be sure to store honey in a place that is dry and fairly warm. Don't put honey in the ice box. Low temperatures may make it crystallize and become cloudy.

### Alfalfa Requires

#### Borax Fertilizer

An application of 20-35 lbs. of borax per acre, along with regular fertilizer, is one of the chief secrets in successfully growing alfalfa.

This small application of borax cures "alfalfa yellows", which is a leaf trouble, and it keeps the plants in a vigorous condition.

Borax response is so outstanding that failure to get uniform distribution will result in streaks through the field.

One application of borax will last for several years. Growers are warned not to apply more than 35 pounds per acre as large applications produce a toxic effect and damage the crop.

Alfalfa should be planted only on fertile, well drained soil that is medium heavy. If planted in wet soil, the crop gets "wet feet" and the plants die out.

### PICKING COTTON

Growers will be unable to harvest the cotton crop with the labor that is now on the farm, and all should help in harvesting this vital crop.

say: 'Here lived the poet Smith.' 'Is that so? If you don't pay the rent right now, they will say it tomorrow!'

### COTTON SEED

Feeding cotton seed is a wasteful practice, say Extension livestock specialists at State College. They urge growers to deliver their seed to the crushers and take cottonseed meal in exchange.

### Save Home-grown

#### Pork With-out Loss

By following a few simple rules, growers can save a good supply of home-grown pork without loss, says Dr. D. E. Brady, in charge of meat research for the Agricultural Experiment Station at State College.

He suggests that since it will soon be time to butcher and cure pork growers should write to the Agricultural Editor at State College, Raleigh, for a free copy of Extension Circular No. 262, entitled "The Farm Pork Supply". This publication lists the equipment needed; describes the best methods of butchering and cutting; and gives two plans for curing—dry and brine curing. Information on smoking and a recipe for making sausage is also included.

### THE ANSWER TO FUEL OIL SHORTAGE... GET A

## CONSERVATOR COAL HEATER

If you can't get enough oil for your furnace, use the Conservator to provide auxiliary heat. This amazing coal heater circulates heat throughout the entire house. Heats 6 to 8 rooms easily in coldest weather. Holds fire several days without refilling. No dust—ashes fall into sealed tight container. The Conservator gives you 30% more heat than ordinary magazine-type heaters—more than cuts your fuel bills in half. Come in and see it today.
