> Theodore Roosevelt Safety For Blind

When giving directions to a blind person help avoid serious accidents by being sure you say "right" and 'left' according to the way he is neing, advises the American Foun-

One of the real opportunities to conserve soil and water on a large scale is available to us at this time in the spring. Since most of these and will cost very little. I am re- wet lands are not as susceptable to provement. There are many rotary mowers

use in the county and they make possible the return of plant materals to the soil at a greatly reduced cost. After the crop is harvested, perhaps the first step is to shred the residue with some such implepend entirely on the soil and land face. This is and excellent safe- past We should use them. guard against soil and water loses brough wind and water erosion Plant material should cover 50% or more of the soil surface, but a mininum of 25% is necessary if any measure of soil protection is to be achieved.

These residues should be left on he land for a period of at least 4 norths which would take us thro igh February and where wind eroion is hazard, the longer it is left undisturbed, the better.

One word of caution. On land which is poorly drained. land preparation could be delayed by large amounts of residue on the surface ferring to the proper use of crop erosion by wind and water, it is residues such as corn stalks and probably a good idea to incorporate stover, weeds, and in some cases, as much residue as possible into cotton stalks and soybean plants. The soil with a disk in the fall. This When these crops are harvested the is not to say that breaking with a next step is to best and most eco- bottom plow is in order. There are nomically use the residue from the few situations in which fall disking plants for soil protection and im- and spring breaking won't do an effective job. Don't be afraid of a little trash on the surface, and don't get in too big a burry to plant. Cold ground is band on stands. Wait until the soil warms to about 60* F. before you plant. You'll have

healthier plants and more of them. I have seen very little burning of ment. The next operations will de- crop residue in Langir County, which is cratifying Maybe it doesn't condition and the kind and amount need to be said, but your soil needs of residue present. Generally, or that organic matter. Make every vell drained land, two diskines will effort to use it wisely. Tractors and incoperate part of the residue into machinery have made this possible the soil and pin the rest to the sur- on a much larger scale than in the

TENNESSEE

The State Capitol building at Nashville was completed in 1859, and is considered to be a fine example of Greek Ionic architecture. It commands a view of the city and countryside from its vantage point on Cedar Knob. On the grounds are the tombs of Prsident James K. Polk and his wife. The War Memorial Building covering two city blocks is just across the street from the Capitol. It houses an auditorium and offices and museums of history. natural sciences, ethnology and ornithology. Across the city is a replica of ancient Athens' Par-
