FOOD FOR FREEDOM

Dealers To Offer Seed For Tood For Freedom Gardens'

Collections of seed for "Food for Preedom Gardens in 1942 Gardens' will be offered by seed dealers throughout the State, according to L. P. Watson and H. R. Niswonger, extension horticulturists of N. C. State College. Seven wholesale seed distributors have been asked to quote prices on the garden seed collection, and county farm agents of the Extension Service have been asked to contact reliable local seed dealers about the same service.

Every North Carolina farm family has been requested to grow a home garden as a part of their contribution to the Nation-wide "Food for Freedom" campaign. To make it easier for rural people to achieve thin patriotic goal, the two Extension horticulturists have compiled a list of vegetable seed, together with varieties and quantities of each, necessary to feed a family of five.

The dealers have been asked to wrap the seed in labeled packages and deliver all the seed at the same time. The collection includes approximately 26 pounds of seed, and is a sufficient quantity to furnish both fresh vegetables and a supply for canning.

The seed, and the amount needed for a garden to feed a family of five,

Strategy Will Help In Insect Control

Insects cost North Carolina farmers thousands of dollars annually in covery. reduced yields and quality of crops. J. O. Rowell, Extension entomologist of N. C. State College, says it will "Marketing quotas and cotton loans the American Red Cross were sent pay farmers to study insects and their habits, and develop means of combatting them.

"The insects of fruit and garden crops," he says, "can be controlled economically by insecticides or chemical measures. But with field crops, the relatively low value prohibits such costly methods in most instances. Hence, the farmer is forced to Mrs. Melvin Perry of Colerain, Sunresort to strategy, to a large meas- day. ure, in fighting many of the field crops insects, especially those that inhabit the soil."

Rowell says the most elementary principle in protecting field crops from their insect enemies is that of keeping the two separated in as far North Carolina farmers. as is possible. This principle is embodied in crop rotations.
