

# Shows Need For Sanatorium For Tuberculars In County

Dr. B. A. Hocutt, of Clayton, named at meetings last year to gather data relative to the need for a tuberculosis sanatorium for Wayne, Wake and Johnston, recently summarized points in favor of a tubercular sanatorium.

Welfare workers in Wayne believe that before four more years the county will have a sanatorium for the treatment and diagnosis of tuberculosis, either in cooperation with Wake or Johnston or alone. Recent information here is to the effect that a county sanatorium could expect \$1 per day per charity patient at the institution from—the Duke Endowment fund.

Dr. Hocutt's summarization of the reasons for a sanatorium follow:

"I might discuss the proposed county sanatorium under the following heads:

1. The Need of a County Sanatorium.

We need it for the following reasons:—A nearby diagnostic, treatment and preventative center.

The first need which would present itself to the average layman would be a place opened in connection with our County Home to care for the indigent and terminal cases, a dumping ground so to speak, for those doubly unfortunate, the victims of poverty and tuberculosis. While this is an urgent need from the standpoint of eradication of tuberculosis it is the least. From the viewpoint of the County Welfare workers, whose every day attentions are called to the end-products of poverty, disease and crime, I would naturally think that in their mind the paramount need of such an institution would be for the indigent and terminal cases. While the above need is urgent to me the paramount needs of County Tubercular Sanatorium are the three named above—nearby diagnostic, treatment and preventative center.

"It is fairly easy for the average practitioner to make a diagnosis of advanced tuberculosis, but sometimes

it is difficult to make a diagnosis of incipient tuberculosis and here the trouble lies. Sometimes it takes observation over a short period of time and repeated examinations to which many patients object or neglect. And then it means so much to an individual to tell him he has tuberculosis when it does not exist, and so much more to tell him he has no tuberculosis when it does exist, especially in its early stage, that I am sometimes reluctant to make a positive diagnosis without the confirmation of an expert clinician and X-Ray aid. For the above reasons we need a clinician with diagnostic equipment to whom we can refer doubtful or early cases.

2. The Treatment—another need. In the second place we need this institution for the now existing cases of tuberculosis in the county. It would take care of three types of patients—the overflow of our State Sanatorium, the advanced cases so they might be near their loved ones, and those preferred being near their home.

3. The Prevention.

The old adage "An ounce of prevention is worth a pound of cure," finds its full meaning in the Great White Plague. There will come from such an institution an awakening of the laymen who will seek examination, and as a result a sensible plan of periodic, complete physical examination will be sought and not only tuberculosis, but many disease will be discovered in the incipient and arrested or cured, or minor defects discovered and corrected, making the individual physical fit, and less susceptible to infection.

**NORTH CAROLINA GOLD**

RALEIGH, June 16—(AP)—Your gold rush country is not the wild west or far North, but aristocratic old North Carolina, says J. H. Bryson, state geologist, and that it has deposits far richer than the Alaskan deposits. The trick is, North Carolina ore is saved at \$2.58 per ton as compared with \$1.28 in Alaska.

# 200 ELECTRIC COOLERS SOLD

Homestead Steel Plant Signs Big Contract With Frigidaire Firm

PITTSBURGH, Pa., June 18—Electrically cooled drinking water is to be provided 12,000 workmen employed in the Homestead works of the Carnegie Steel Company. The company today announced placing a contract with Frigidaire Corporation, subsidiary of General Motors, for more than 200 electric water coolers to be installed at once.

Efficiency tests recently completed by company engineers, disclosed that electric coolers afford constant temperatures, adjustable to any degree, furnish safer and better drinking water for men toiling in intense heat and in addition permit the company to effect a saving in ice bills and servicing costs of \$40,000 a year. The expected annual savings, according to the announcement, will total more than one third the installation cost.

Two electric coolers were set up in the open hearth section of the plant in 1926. Records were kept of drinking water temperatures obtained under actual working conditions where the thermometer sometimes rose beyond 130 degrees and cases of industrial cramps frequently occurred. The results formed the basis of the decision to similarly equip the entire plant.

Workmen come from long distances during these tests, to get a drink from the electric coolers, proving even better than engineers figures the superiority of this type of water cooling, according to the announcement. The Homestead Steel works expects to install electric refrigeration in its restaurant and other places and do away with ice entirely, it is said.

Frigidaire Corporation, which is making the installation, is the largest manufacturer of electric refrigeration equipment in the world. It recently added a complete line of electric water coolers to its list of products which includes all types of domestic and commercial electric refrigerating equipment.

# ANNOUNCES BIG PRIZE CONTEST

Coca-Cola Bottler Explains \$30,000 Prize Offer to Those Reading Ads

W. L. Rawlings, president of the Coca-Cola Bottling Co., of Goldsboro announced yesterday that his company in conjunction with the other Coca-Cola bottlers in the United States and The Coca-Cola Co., Atlanta, Ga., were going to reward those who keep their eyes open to Coca-Cola advertising during the next three months with \$30,000 in cash prizes.

"Of course," said Mr. Rawlings "we've got to know that they have noticed it, and of course, we can't reward everybody who notices it with a cash prize. So we hit upon the idea of conducting a contest, and we'll reward those who have been most alert and most discerning."

The contest will be conducted through advertising in magazines, newspapers, posters, outdoor signs, soda window, refreshment stand and soda fountain decorations. It started the first week in May with a double-base spread in The Saturday Evening Post, and will continue for three months.

"The idea is to find what we call six keys to the popularity of Coca-Cola. These six keys are really six reasons why people like Coca-Cola. An interesting thing is that the public itself gave us these reasons—through a survey we conducted last year. The 'keys' will be illustrated and presented in Coca-Cola advertising. You find them and answer two simple questions, and the prize, \$55 in all with a first prize of \$10,000 will be awarded for the best answers."

"From the number of people who have already asked me questions about this contest, it seems to me the public is going to get a lot of fun out of it, and some of the ads going to get some real cash money."

**"unflagging performance and uncommon long life—these Oakland qualities do not change with the changing trends of motordom."**

You may be intrigued by the arresting beauty of Oakland-Fisher bodies or stirred by the car's spirit and dash when you drive. But once you become an Oakland owner, you will discover an even deeper source of satisfaction—unflagging performance and uncommon long life.

These are Oakland qualities that do not change with the changing trends of motordom—for they result from the

**Hour after Hour over any Road -and always in Comfort!**

Scientifically balanced—swung low to the road—and with the body resting on chrome vanadium steel springs that are 68% as long as the wheelbase—the Most Beautiful Chevrolet provides the most astonishing riding and driving comfort ever offered in a low-priced car.

At every speed up to wide open throttle, it holds the road with a surety that is a revelation—while rough stretches are negotiated in perfect comfort. You can drive for hour after hour, mile after mile, over any road, without the slightest sense of forcing or fatigue.

This exceptional riding and driving comfort has been engineered into Chevrolet cars as a result of the most gruelling road tests ever conducted in connection with the development of an automobile.

Fleets of Chevrolets are constantly under test at the General Motors Proving Ground—driven day and night over every conceivable type of road, from concrete straightaways to deep-rutted clay lanes. Performance results are measured and recorded with scientific accuracy by delicately exact electrical and mechanical devices—invented and built by General Motors engineers. Every unit of the car has been tested and improved until it contributes its full share of comfort.

We have a demonstrating car waiting for you. Drive it over the roughest road you know. You'll find a type of performance that will delight and amaze you—riding comfort that you never thought possible in a low-priced automobile.
