TO BLAST THE WORLD'S BIGGEST WINDBAGS!

A roaring, raging hurricane seldom hits harder than 100 miles an hour. But at Wright Field, Ohio, Air Force engineers whip up an almost unbelievable 400-mile wind—to help improve American military planes.

Two forty-foot fans, weighing nearly a million pounds, put the "hurry" in this hurricane tunnel. They're driven by a huge 125-ton electric motor. They permit tests of large-scale plane models at speeds up to 400 miles an hour.

America's sleek fighters and burly bombers are faster, safer, more deadly to the enemy, because America has the world's biggest wind tunnels—and the world's biggest supply of electric power.

In fact, electric power is basic to practically all war production. It turns the machines that turn out tanks, planes and guns. It welds the steel seams of fast-building ships. It flashes the urgent words of war by air and by wire.

War has brought shortages of many materials, but there has been plenty of electric power for war production. The electric companies under business management, supplying about seven-eighths of all America's electric power, had a BIG job to do—and did it!

They've produced billions more kilowatt-hours each of the last three years. They've been able to do it because they know how from long experience

because business men in this country are still free to roll up their sleeves and put their ideas and plans to work.
Let's keep this freedom after our whirlwind has dusted off Adolf, Tojo and Benito!
