NOTICE OF SHERIFF'S SALE OF LAND FOR TAXES DUE HOKE COUNTY

By virtue of authority vested in me as Sheriff of Hoke County, and in accordance with Section 4, Chapter 213, Public Laws of North Carolina 1927, I will on Monday, November 1, 1943, offer for sale to the highest bidder for cash to satisfy the unpaid taxes for the year 1942, the following tracts or parcels of land. Time for sale: 11 O'Clock A. M. Place of sale: The courthouse door in Raeford, N. C. The amounts herewith listed do not include delinquent penalties nor cost of advertising.

D. H. Hodgin, Sheriff of Hoke County, N. C.

State College Answers Timely Farm Questions

Q. I want to plant as many grazing crops as possible this year. Where can I get a grazing schedule?

A. Ask your county agent for a copy of War Series Bulletin No. 22 or write the Agricultural Editor, State College, Raleigh, for this publication. It tells what crops to plant, when to seed them, and during what period grazing may be expected in the Coastal Plain, Piedmont or Mountain sections.

Q. What is the proper amount of ingredients for the dry curing of meat?

A. Dr. D. E. Brady, in charge of meat research at State College, says that for each 100 pounds of pork, use 5 to 8 pounds of salt, 2 to 3 pounds of sugar, and 2 to 3 ounces of saltpeter. The mixture using the smaller amount of salt should be applied in cold weather. If there is danger of the meat temperature going above 45 degrees and where hams are to be held for prolonged storage, it is much safer to use a higher concentratoin of salt. Ask your county agent for Extension Circular No. 262 or write the Agricultural Editor, State College, Raleigh, for this publication.

Q. When should cattle be treated for lice?

A. Fall is the best season of the year to treat cattle for lice, says L. I. Case, Extension Animal Husbandman at N. C. State College. The treatment are most effective when the animals are taken off the grass, while the weather is still fairly warm, and before the cattle are placed in winter quarters. This avoids getting the winter quarters infested with the biting louse. At least two treatments, 14 to 16 days apart, should be made. The first treatment will kill the grown lice, and the second will eradicate the lice that were unhatched at the time of the first treatment.

Pig Losses Cut By Care This Fall

Farmers can cut fall pig losses in half if they will take these precautionary steps, says Dr. C. D. Grinnells of the animal industry department of the State College Experiment Station.

Clean and disinfect farrowing houses, and move them onto clean ground; avoid overfeeding brood sows just before and after farrowing; and wash the sows thoroughly with warm, soapy water.

Be sure the houses have guard rails to prevent crushing pigs; feed clean red dirt to pigs on plank or concrete floors the first three weeks to prevent anemia and thumps; disinfect navel stump when pigs are born to prevent joint ill; have pigs immunized against cholera around weaning time; and provide warm, dry well bedded quarters that are free of draft.

"We need to save every pig this fall, if we are to reach emergency pork quotas for 1944," Dr. Grinnells declares. "The extra work involved in taking these precautionary steps will be well repaid by more pigs saved, and more meat for America and her Allies."

County Council Of Home Demonstration Clubs To Meet

"The Hoke County Council of Federation of Home Demonstration Clubs will meet Friday afternoon, October 8, at 2:30 at the courthouse," says Miss Josephine Hall, home agent. The purpose of the meeting is to make plans for the statewide membership drive which starts in October and runs through December.

Mrs. Marshall Newton, county council president, will preside. Miss Verna Stanton, district agent from Raleigh, will be present to discuss objectives and goals for 1944. Plans will be mad made to try to double the enrollment of home demonstration club members in 1944.

After the business meeting a short social hour will follow. All club officers in the county are urged to attend and any other club members are invited.

IRISH POTATOES

The average yield of Irish potatoes in the U. S. has increased from 112.6 bushels to 136 bushels per acre in the last ten years. It is thought that this increase is partly due to the new varieties which have been introduced. One of these is the North Carolina "Sequoia".

GRAZING CROPS

A mixture of small grains, 4 to 5 bushels per acre, and some crimson clover will save high priced feeds and keep the hogs growing, advises E. V. Vestal, swine specialist State College.
