

THEY CALL HER SENSATIONAL. She's Kim Hunter, 20-year-old Florida girl, under mutual contract to David O. Selznick and RKO Radio. She is a recruit from traveling stock and the Community Playhouse in Pasadena, Calif. Her emotional talent is impressive. She displays some of it currently in the horror drama, "The Seventh Victim," playing opposite Tom Conway and Jean Brooks. She is also cast prominently in the forthcoming Ginger Rogers picture.

State College Answers Timely Farm Questions

Q. What is a good recipe for making sausage?

A. State College Extension Circular No. 262, which covers the butchering and curing of the farm pork supply, gives the following recipe: For 50 pounds of pork (three-fourths lean and one-fourth fat) use 1 pound of fine table salt, 2 1-2 ounces of finely ground black pepper, and 2 ounces of sage. Mix this thoroughly and spread evenly over the meat. Then stuff the meat well before chopping. A free copy of Circular No. 262 may be obtained by writing the Agricultural Editor, N. C. State College, Raleigh.

Q. What should I do to control the peach tree borer?

A. Paradi-chlorobenzene crystals should be applied before October 15 or even better control may be obtained by using ethylene dichloride emulsion, reports J. Myron Maxwell, in charge of Entomology Extension at State College. The latter material may be applied any time during October but growers should place orders for it immediately. A ten per cent emulsion is recommended for all age trees this year.

Cotton Picking

Wake County school children and teachers had picked 1,247 bales of cotton through October 5, reports County Agent L. T. Weeks of the State College Extension Service.

Equipment

Growers should protect their farm machinery from the weather, and check and adjust it for maximum efficiency, says David S. Weaver.

State College Hints To Farm Homemakers

By Ruth Current

Buy a pressure canner now and be ready for next season's canning, suggests the War Food Administration to housewives and community canning groups lacking this useful equipment.

Rationing of pressure canners has been relaxed so that housewives can now buy a canner even if they are unable to share it. Apply directly to local agricultural War Boards for a certificate. Applications previously turned down by local boards will be reconsidered on request. Certificate holders may buy from any dealer without the trouble of locating a canner before applying. The new pressure canner is very satisfactory. See your County Home Demonstration Agent if you need help in operating your canner.

Keep your clothes fit: Choose the right fabric for the purpose. Air clothing frequently and use dress shields to prevent harmful effects on fabric from either perspiration or the deodorant you use.

Keep clothing clean—take care of stains and spots. Dirt cuts threads and will shorten the life of your garment. If clothes have constant care, they'll wear. Follow cleaning instructions carefully.

Use correct heat for pressing your clothes. Be sure your iron is adjusted to the correct heat for the fabric. Get instructions when you buy a garment.

Place garments on hangers when removed, choosing the right hanger for the garment.

Watch for small repair jobs—don't

put off doing them. If you let it go that small tear may grow too large to mend. Watch hems and seams, too. Store clothing properly.

Place Orders Now For '44 Nitrogen

Peach and apple growers should be thinking now of their requirements for nitrogen fertilizer in 1944, say extension horticulturists at State College. They advise placing orders with fertilizer dealers now for the amount growers estimate they will need next year.

There are only limited supplies of nitrate of soda and cyanamide for use, and sulphate of ammonia will not be available at all for fruit growers next season. A considerable quantity of ammonia nitrate, however, will be released for direct application to orchard trees.

With these fertilizer limitations, the horticulturists say it is especially important that every fruit grower use nitrogen fertilizers in the most efficient way. They say, don't waste fertilizer by using only one-half as much as each tree needs. "Efficient use," means applying enough to produce good growth, fruit set any yield.

They also advise fruit growers to consider fall applications. Experiments have shown that when nitrogen is applied in the fall, the roots take it up and store it in parts of the tree where it becomes available as the tree grows.

Role Of Farms In Our State Praised In Greyhound Ad

The current series of Greyhound bus advertisements, which has been appearing in this newspaper and in others throughout the State, has been featuring the part played in our community life by various occupational groups and organizations.

The important roles played by our State's highways, schools, and newspapers have already been interestingly presented. This time the farms of our State have their turn. City dwellers and farmers alike will undoubtedly discover in the facts presented many things they didn't know before about the agricultural achievements of our State.

Young People's Rally At Tabernacle

A young people's Rally is to be held Sunday, October 17th at the People's Tabernacle. Delegates will be present from other tabernacles of the People's Christian Movement in North Carolina. The speakers for the occasion are as follows: 11:00 A. M. the Rev. Tommie Holsauser of Kannapolis; 3:00 P. M. the Rev. Lee Chatlin from People's Bible School, Greensboro; 7:30 P. M. the Rev. William Armstrong, Greensboro. Everyone is cordially invited to attend these services.

Herefords

Thirty-seven buyers from three states paid an average of \$290 per head for 66 registered Herefords from Watauga County at a recent sale at Boone, reports County Agent H. M. Hamilton, Jr.

Winter Legumes To Increase Production

Used in the right way, winter legumes can go far to supply the soil with much of its needed nitrogen, according to J. C. Hutchinson, Asst. soil Conservationist of the Pee Dee-Cape Fear soil conservation district.

In 16 demonstrations conducted in 1941, under the supervision of the Executive service, to show their value as soil building crops, Austrain winter peas boosted the yield of corn from 30 to 46 bushels per acre, or more than 50 per cent.

In another demonstration, corn planted March 29th without benefit of a winter legume just before and liberally fertilized with nitrogen, phosphate, and potash was badly beaten by corn planted May 20th after a good crop of vetch was turned under and phosphate and potash only added.

Seven rules for successful winter legumes growth are: early planting, a good seed bed, inoculation where legumes has not been grown successfully before, liberal rate of seeding, proper methods of planting, fertilization, and letting the crop grow.

Predicts Soy Beans To Rank High As Money Crop

Raleigh, N. C., Oct. 12.—W. H. Darst, who was recently made head of the Seed Laboratory with the State Department of Agriculture, is of the opinion that the soy bean will soon rank along with tobacco and cotton as one of the State's big money crops.

In pointing out recently that the big soy bean producing counties of the State are Beaufort, Camden, Currituck, Edgecombe and Pasquotank, Darst declared that North Carolina is one of the pioneer states in the production of soy beans, and up until 1926 led the Nation in the production of this crop which during the past five years has become so important.

The seed analyst explained that while soybeans grown for seed will continue to demand nothing but the highest prices, the greatest demand for soy beans in the future will be in the processing field, with further development of varieties grown for the high oil and protein content.

During the past 10 months samples of soy beans taken from a large portion of 1942 crop processed in this state have been inspected by seed analysts with the State Department of Agriculture. Darst said that, based on these samples, 65 per cent of the crop graded better than Number 2; 25 per cent graded Number 3; eight per cent.

Will Import Ewe Lambs For Sale In Eastern N. C.

Several carloads of Western ewe lambs will within the next few weeks be shipped to Eastern North Carolina for the farmers of that area, R. S. Curtis, sheep marketing specialist with the State Department of Agriculture, has announced.

"These lambs will be of the same breeding—Columbia-Rambouillet—as the white-faced yearling ewes distributed in the State early this year," said Curtis.

He explained that in purchasing lambs, the farmer's initial cost will be less than if he purchased mature sheep. These lambs will sell for approximately \$10 each.

A Plane Every Five Minutes To Come Soon, Says Nelson

London—American war production this year will be at least one and a half times the combined output of Germany and Japan and next year will probably be twice as great, Donald M. Nelson, War Production Board chairman told the British.

Speaking at a dinner given in his honor by the British government, Mr. Nelson declared, "Very soon we will be turning out a completed plane every five minutes around the clock, every day of the month."

Since January 1, 1942, he added, America produced 60,000 tanks and tank chassis, 53,000 scout cars and carriers, and 1,100,000 trucks and trailers.

As for artillery and ammunition, he said, enough had been manufactured to "let us fire nearly 2,000 shots at every soldier in the Axis armies."

Show and Sale

The Elkin Fat Stock and Wool Show will be held at Elkin on October 14 and 15, announces L. I. Case, Extension Animal Husbandman at State College.

Meats

Ration points do not have to be given for long tongue of beef, brains and kidneys. These meat items are relatively low in cost and high in food value and flavor.

Cyanamid

There are no supplies of cyanamid available for fertilizing orchards this fall but growers may use ammonia nitrate.

Number 4; with nine per cent in the Low Grade basket.

Irish Potatoes
The fall Irish potato crop is estimated to be 73 million bushels over last year's crop, sufficient to meet all military needs and leave a larger supply than usual for civilians.

Wood

"Military equipment, supplies and food must be packaged and shipped to our armies and allies. This makes timber and pulpwood just as important as food," says R. W. Graeber, State College forester.

Butter

The saving of only one-half ounce of butter per capita per week would have provided enough butter to have supplied our entire army last year.

FOR BETTY CO-ED. Rita Corday, currently appearing in RKO Radio's "Mr. Lucky," models a light blue jersey dress with unpressed pleats. Buttons and belt buckle are of patent leather.
