**20 years service**  
Willie (Frank) Branch recently completed 20 years of unbroken service at the Raeford Plant of Burlington Industries. Branch began work with the local firm as a sweeper in the Spinning Department and has since been promoted several times. He presently works in the Weave Department as a Weaver. In recognition of his loyal service he was presented a pearl pin, certificate and gift by Plant Management to commemorate the achievement.

### ...Fall gardens

(Continued from page 4B)  
flowing pears and cherries lost due to peachtree borer than any other problem insect or disease. When this borer gets into the trunk or limbs of the tree it's too late to effectively control it with insecticide. However, during the month of August new worms are hatched and will be actively trying to get into the above mentioned trees.

Therefore, tree trunks and limbs should be sprayed to the point of run off during the last week of August and the first week in September with an application of Thiodan 50 WP or Lorsban 4 EC. For more information contact your local county extension office.

### Care of Azalea

The September caterpillar is normally very active on azaleas during September. This worm can defoliate an entire plant very quickly. Continue to check your plants from now through September for foliage feeders, and if they are found treat with an appropriate insecticide.

Do not add any more fertilizer to azaleas, rhododendron, or centipede grass this year. Fertilizer applied in late summer and early fall to these plants will prevent them from hardening off before winter. Without adequate preparation for cold weather the plant will suffer more cold damage during the winter months. Many plants are actually killed because of late fertilization.

Therefore, leave the fertilizer in the bag until next year!
