## DIET FACTS & FALLACIES

### WATER: THE MOST IMPORTANT NUTRIENT!

How many glasses of water do you drink each day? If you are like most people, you will fail to drink enough!

Water composes up to 75 percent of your weight and is involved in almost every bodily function. Without sufficient water, your organs and glands fail to function properly, and waste products cannot be flushed out.

Each day, your body loses 2 1/2 to 3 quarts (approximately 10 glasses) of water through breathing, perspiration, urination and other bodily processes.

No other liquid can substitute for water! Sodas, coffee, tea and alcohol contain additives or lack the essential trace minerals found in water. Diet Center stresses the importance of water by

recommending you drink eight, 8-ounce glasses each day.
