That rabbit fur is sold throughout the world under more than 60 names, none of which is "rabbit", is quite generally known. But of late years, through scientific breeding certain rabbits have developed coats quite similar, to the furs of rarer animals. In such cases, perhaps rabbit fur isn't rabbit fur after all.

PROFITABLE TO USE SILAGE AS A FEED

Most Economical Home Grown Roughage For Dairy Cattle

Many North Carolina dairymen, not now using silage as a cattle feed, would find it profitable to do so.

"We have come to recognize silage as one of the best and most economical home-grown roughages for dairy cattle," declares John A. Arey, dairy extension specialist at State College. "Silage is succulent and palatable. It is a good substitute for grass in winter and a valuable supplement to pasture in summer. An acre of corn that will yield ten tons of silage when fed to dairy cows in the form of silage will produce about 400 pounds more milk than if the corn were fed in the dry state. Then, too the loss of feed sustained during harvesting and feeding operations is almost eliminated when the corn is converted into silage."

Mr. Arey urges dairymen to repair their old silos or build new ones during the latter part of July and through August while the rush of summer work is over and fall work has not yet begun. This will avoid delay when the silage crop is ready to cut.

The dairy extension office at State College has plans and bills of material showing how to build the vertical silo and Extension Circular 201 may be secured telling how to dig a trench silo. The trench silo is inexpensive. Studies made last year on 372 new silos dug in the State show that the labor cost per ton of capacity was about 50 cents. In some instances, the labor cost was not reported as the farmer said the silo was dug during odd times. The equipment used in filling the trench silo also costs less than that used in filling the vertical type. However, the vertical type is probably better adapted to the needs of dairymen with large herds of cattle. The trench silo will be suitable for the man with a few cows and who has had no experience in feeding silage, Arey says.
