## Town of Hazelwood Tax Notice

The Board sincerely requests and expects a prompt remittance in full of all taxes now due. They are endeavoring to keep the town's water, sewer and street work up, and in addition, make further water and sewer extensions for the convenience and health of our citizens. This is impossible unless accounts due the town are paid.

You have been officially notified that if your taxes are not paid by November 1st, 1925, your property will immediately be advertised for sale to justify the tax claims.

Help to keep your tax rate down by paying your obligations to the town.

**Board of Aldermen,**

Town of Hazelwood.

**You can hide  
more surface  
with  
KURFEES  
Pure Paint**

It's the amount of lead in any paint that determines its covering (hiding) capacity. It's the quality of lead that measures its length of life. Kurfees Paint contains 20 to 40 percent more lead per gallon.

### KURFEES ENAMEL

Make your kitchen furniture ever new with Kurfees enamel. A quart will do your table and chairs. Easy flowing. You can apply it. White and 20 colors.

Kurfees Paint contains more square feet of surface-protecting value in every gallon, and gives you more years of service in the weather. That is real economy. Kurfees costs no more than the ordinary kind, and it is surprising how little it requires to paint a house right. Let us figure your quantities for you and show you the beautiful color selections.

Kurfees Makes a Paint for Every Purpose—Fits Every Surface

"Tempered to the Weather"

## Community Building

### Every Citizen Owe Duty to Community

It is a duty of great importance for every citizen of city or town to give his unlimited aid in improving his community. Rosabelle Houston writes, in Grit.

A well-appearing city not only voices the lives and characters of a mass, but of separate individuals. Every citizen should make it his duty to not only improve his own surroundings, but to improve those of his neighbor by suggestion and helpful aid.

By experience many people have found that beauty and order draw out the best in them and make them aspire to do higher, more noble deeds. A mean, narrow mind cannot long exist in a location where beauty, order and peace are a law and a religion. The far-seeing, thinking parent should see that the growing minds of the home, from babyhood, receive the benefits derived from order and cleanliness. If all the parents of our country would only endeavor to set an example of cleanliness and neatness before the eyes of their children, the school and social organizations would not be confronted with the problems that they are today.

### Mistake to Postpone Proper Use of Paint

Although paint improves appearances, and many people paint buildings for that reason alone, the chief purpose of painting should be to preserve buildings, fences and implements from the effects of the weather. The cheapest way to keep buildings in good condition is to paint them at regular periods. The farmer who does his own painting has a decided advantage if he has a knowledge of the different kinds of paints and their adaptability. He knows how to mix paint, prepare the surface to be painted, how to put the paint on, and he knows the same about whitewashing. Farmers nowadays do not put as much thought on these things as they used to, especially in some sections of the country. Painting should not be put off too long, because if the wood has begun to rot, or the iron has begun to rust, the rotting and rusting will continue after the paint is applied. Besides, the longer painting is put off the harder and more expensive it becomes.—Pathfinder Magazine.

### Protection From Fire

Wood frame is inflammable. Hence measures should be taken—not to prevent its use—but so to protect it that the fire is resisted. There are important points in every residence where fires are likely to start. These, too, should be made able to resist the greedy tongues of flame. Unless a home becomes safe in itself it becomes a menace to all others around it. In cities of any size the houses and apartments are building closer to one another. Compactness and space conservation is the thing. But compactness increases risk and the public must be made to realize the danger. Great conflagrations can show them the way, but the losses are too appalling for the example. Exposition of facts is the real road to the mind of the great mass of citizens. Fire prevention societies, therefore, can do no greater service than to spread their valuable propaganda to architects and builders—the men who hold the leash to the fire risks in buildings. These men, with arguments given them by specialists, will be only too glad to make the houses they design and build safe for home owner and community.

### Economy Worth While

Saving for a purpose is particularly stimulating, and above all when the saving is toward a home. For years we have been saying, save, save, save. Such admonition has little effect unless back of it there is a clearly defined purpose. We do our best only when we are saving for something definite. The object must be something worth while; it must have a strong appeal and it must be something possible of attainment.

Owning a home has a tremendous appeal to most men and women. It is something most of them can attain, and might be more stressed as the end of saving by a greater number of building and loan associations.—Exchange.

### Applies to All Towns

Making a Bigger and Better Omaha is not the work for committees or groups. It is the work of every citizen. If you have an idea that there is something the matter with Omaha, forget it long enough to investigate yourself. You may make the astonishing discovery that the matter is with yourself, not the city.—Omaha Bee.

### Already Working

Fiskin—Just what is a budget, anyway?  
Riverfront—It's a plan for spending your money.  
Fiskin—Then I don't need it. I'm married!

### Cost Plus

Reiley—You owe me ten dollars.  
Spencer—But you only did seven dollars' worth of work!  
Reiley—Sure, and ain't a fellow entitled to a fair profit?

## ARCTIC REAL ESTATE

We may perceive why the nations are disputing over who should own the ice-bound lands near the North pole. The earth, in 10,000 years, may tip up again and those regions become tropical once more. There's nothing like being foresighted. In saying "tip up," we are only speaking hypothetically, says the St. Louis Globe-Democrat. Nobody knows exactly what did happen when the polar ice came down as far as Schenectady and with its long, congealed fingers dug out the beds of the Finger lakes in northern New York, but in some general overturn it appears there must have been forests of giant ferns in Greenland which afterward became coal beds. This old world was quite a plaything with the forces of nature. Such being the case, one never knows what may happen to a piece of real estate nationally owned. It is just as well to be forehanded. Don't make your lease any longer than ninety-nine years. In the former ice age a northeaster from Maine was a desperate visitation and no doubt froze all the hardy early marrowfat coconuts in Cuba, and they had no weather predictions.

Comparatively few of the foreign-born in the United States make their living from the soil. In many cities foreigners predominate, but the land is tilled by about 3,000,000 native white farmers as compared with about 600,000 foreign-born white farmers. Colored farmers outnumber foreign-born farmers two to one, says a bulletin of the United States Agricultural department. The largest proportion of foreign-born farmers is in California, the figures being 75,000 to 35,000 nonnative. States that have the most foreign-born on the soil are Michigan, Montana, Nebraska, South Dakota and Washington. New York farms are operated by 25,000 foreign-born and 165,000 native-born farmers. Throughout the country there are 7,000 Japanese and 600 Chinese farmers.

A college at sea is the Annapolis, which weighed anchor at the navy yard for a four months' cruise in the Mediterranean. The 80 cadets will see the world and at the same time receive a liberal education, fitting them not merely to command ships of the merchant marine, after four terms of six months, but to be useful citizens. The young navigators and engineers will have a balanced ration of work and play. Wherever they go, they will reflect credit on the commonwealth and uphold the prestige of our flag in foreign waters. To no higher ambition can they aspire when their course is completed than to have a part in building up the commerce of our own seaport with the big ships they bring in.

A. Hudson Maxim says that the greatest invention yet to be made is a method of government whereby the common people may be made self-governing and at the same time be prevented from committing political and social suicide through enfranchised ignorance and avarice. The next greatest, he says, are a method of utilizing interatomic energy for power and heat and a method of transmitting dynamic energy by wireless, so that from a central source motors may be run hundreds and thousands of miles away. Another great invention yet to be made is a simple device by which deaf people may hear.

The inventor of the rotorship, Anton Flettner, has quickly proven to Germans that his device is serviceable on land as well as on sea. There is some doubt as to whether ships propelled by rotor power can offer effective competition to other trade vessels, but Berlin believes it can save money by using wind towers to generate electricity. The city has given the inventor a contract to erect two such towers, which it does not regard as experimental.

Mr. Coolidge's reported determination to repulse all future attempts of notoriety hunters to be photographed with him for publicity purposes will be applauded by the American people, who do not believe that the President of the United States or his high office should serve as a background for anybody's passion for personal advertising.

The Boston Transcript thinks that 30 years from now the flappers of today will be lamenting the habits of the rising generation. The Transcript is optimistic if it believes the flapper of today is going to be able to stand the pace for 30 years.

Sir Donald Ross, British scientist, says that the span of life can be extended to 150 years at the cost of sixpence a head. In a majority of cases this would be an unwarrantable extravagance.

The human race, say archeologists now working in Asia Minor, is considerably older than is generally supposed. This opinion, like a conclusion arrived at on a Monday morning.

Always  
Use  
High Class  
**STATIONERY**  
to Create a  
Good  
Impression

## The Very Latest Styles

It's an old, old saying that the people you write to often judge you by your stationery.

And there is a great deal of truth in the fact that stationery can be so chosen as to reflect the best of judgment and taste.

Stationery suitable for one occasion may be entirely out of place for another. Then, too, the styles in stationery change the same as styles in clothing.

To be sure that your stationery is right for all purposes, always buy it here.
