Plant Poisons Mosquitoes.
A South American investigator has discovered that the mosquito larvae cannot live in water where the plant known as *Cyrtandra foetida* is found. This plant will grow almost anywhere and may be the means of ridding localities of this troublesome pest. The experiments prove conclusively that the insects are killed quickly owing to some toxic substance thrown off by the plants.

Check Protection without a Machine

Given Without Cost to Our Depositors

To combat the numerous frauds caused by "raising" checks, we have adopted the Protectu Check System. Each Protectu check has a series of numbers lithographed in indelible ink at the end of each check [like a money order]. By a cutting device provided with each check book, the end can be torn so that the highest amount indicated on the margin of the check represents the maximum amount of check.

This special size business check book, three checks to a page, is suitable for all business firms.

Protectu checks may also be had in two pocket sizes.

If you are considering opening a checking account, by all means come in and see this ADDITIONAL SERVICE that we are giving free to our patrons.
