

line between Colorado and Utah, near the only spot in the United States where four states touch, and is reserved because of its prehistoric towers and other impressive masonry structures. Palm Canyon is in southern California and contains many fine specimens of native American palms.

From now on much will appear in print about these two national monuments-which will be variously described as national parks, national forests, national reservations and national menuments, with indiscriminate references to their control by the national park service and the forest service. So what follows seems advisable in order to explain the complications which congress neglects to straighten out.

There are now nineteen national parks with a total of 11,372 square miles. There is one group of twentysix national monuments (including the two new ones) containing about 1.900 square miles. These national parks and monuments are under control of the national park service, a bureau of the Interior department.

There are seven "national military and other" parks-such as Shiloh, Gettysburg and Lincoln's Birthplace-administered by the War department, which also controls two national monuments-Big Hole Battlefield and

There are the national forests, with an approximate area of 155,000,000 acres, under the charge of the forest service, a bureau of the Department of Agriculture. There is a group of eleven national monuments containing 510 square miles in charge of the for-

for grazing for a profit.

Some day, it is hoped, congress will straighten out the tangle by putting the national "military and other house, has circular kivas compactly means that the Indians shall willingly parks," and all the national monu- imbedded in rectangular rooms ar- sell. BOLL WEEVIL HAS NOT FRIGHT ENED THE FARMERS IN THIS SECTION.

ACCORDING TO STATEMENT

Per Cent of Acreage Was Fertilized.

Raleigh.

The two per cent increase in the cotton acreage of Norh Carolina is "good evidences that the advent of the boll weevil has not frightened the cotton growers away in this state," according to a statement issued by W. H. Rhodes, of the North Carolina and United States departments of agreiulture.

"The condition of the crop is 77 per cent of a normal at present asshown by the cotton report released by the United States department of agriculture released June 1." reads the announcement. "This forecast a yield in this state of 231 pounds of last year at this time, but three per cent above the average condition for the past five years. The four states showing a higher average than North Carolina were Virginia, 78; Florida, 87; California, 93, and Arizona, 92 per cent.

"Reports indicate that 98 per cent of the cotton acreage in North Carolina was fertilized, which is above the usual average. The amount used per acre averaged 445 pounds this year as compared with 406 pounds last year. This was a much higher grade of fertilizer than farmers usually buy for cotton, and cost, on an average of \$30.20 per ton, slightly iess than the price last year.

'The condition of the nation's crop is 71 per cent compared with 69.6 per cent at this time last year, and 66 per cent the year before, 1921. A re-June 1 reports, showing the area picked in 1922 as 33 036,000, with an average yield of 141.3 pounds of lint

tivating, and Labor scarce.

Countles Have Health Gepartments. With the assistance of the 3: te Board of Health twenty-four countles during the past year have maintain d health departments. The total expenditures amounted to \$214,831.35. Of this amount \$62,500 was contribut ed by the State, and the remainder of \$152,331.35 came from the counties.

The program of work together with the cost, varied in the several counties. Some ha donly the health officer devoting his time and energy toward the protection and promotion of public health. Others had in addition to the health officer one or more nurses a sanitary inspector and in some cases skilled laboratory 'echnicians. A few had permanent dental clinics for the benefit of their school Reports Indicate That Ninety-Eight children. The budget varied from \$4200 to \$27500.

Regardless of personnel or size of budget, however, in each county the program of work was based upon a carefully calculated basis of costs whereby the relation of expenditures to results achieved might be easily ascertained. For the first time in the United States it was made possible to measure, in a manner fairly accurate, the public health work in terms of dollars and cents.

A careful compilation of the reports of the work accomplished during the ear shows that every county received in direct returns more than a dollar for each dollar invested. In some counties higher dividends were paid than in others but there wars a profit in each. For the total of \$214,831.35 expanded total cost equivalents proseven per cent below the condition duced in these twenty four counties tern was \$1.48 for each dollar spent.

Here are some of the thing; accomplished by the health department: 5,209 contagious diseases were quarantined by mail and 8,312 additional cases quarantined in person: 46,922 complete typhoid vaccinations were given, 23.628 smallpox vaccinations. 909 whooping cough vaccinations, and 13,925 little children were rendered immune from diphtheria by the administration of toxin-anticoxin. A total of 8 560 treatments for venereal diseases in indigent cases were given. Examinations in clinics for the tuberculosis totaled 1,612, while 2,118 homes where tuberculosis existed were visited. These achievements cover the high spots in just on unit of the health officer's work, that of communicable diseases.

Under the general head of hygiene vision in the final estimate of the is grouped maternity and infancy 1922 cotton acreage is shown by the work and school hygiene.
