Worn Out Caring for Children and Housework-See how Lydia E. Pinkham's Vegetable Compound Helps

Indianapolis, Indiana. - "I was in a ery nervous and run-down condition

began taking it. From the second bottle I noticed a big improvement, and I am still taking it. I am not a bit nervous now, and feel like a different person. It is a great medicine for any one in a nervous, run-down con-

dition and I would be glad to give any one advice about taking it. I think there is no better medicine and give you permission to publish this letter." -Mrs. Anna Smith, 541 W. Norwood Street, Indianapolis, Indiana.

The important thing about Lydia E. Pinkham's Vegetable Compound is that it does help women suffering from the ailments common to their sex.

If you are nervous and run-down and have pains in your lower parts and in your back, remember that the Vegetable Compound has relieved other women having the same symptoms. For sale by druggists everywhere.

BIG ULCER ALL HEALED

"Here is another letter that makes me happy," says Peterson, of Buffalo. "One that I would rather have than a

"One that I would rather have than a thousand dollars.

"Money isn't everything in this world. There is many a big-hearted, rich man who would give all he has on earth to be able to produce a remedy with such mighty healing power as Peterson's Olntment, to sell at all druggists for 60 cents a large box."

"I was an untold sufferer from old running sore and ulcers. I had tried most everything without any relief from pain. A friend told me of your wonderful ointment and the first box took away the pain that had not left me before in years, and after using just nine dollars' worth of the salve I am cured. The ulcer was 9 inches by 6½ inches, is all healed and I can walk, Never, never will I be without Peter-

"You may use this to recommend your ointment, if you wish. I cannot say enough to praise it. Yours truly, Mrs. Albert Southcott, Lyndonville, N. Y." Mail orders filled by Peterson Ointment Co., Inc., Buffalo, N. Y.

NERVOUS, RUN-DOWN MOTHERS STOCK

Potatoes Are Good Feed

for Horses and Cattle Potatoes may be fed to live stock in limited quantities in connection with other feeds. While they may be sliced and fed raw with dry feeds, it is best to cook them before feeding, as heavy feeding of raw potatoes will cause scouring. Under ordinary farm conditions, boiling or steaming is the most economical method of cooking potatoes for live stock. Feeding investigations indicate that when potatoes are fed with other feeds to balance the protein requirements, from 350 to 450 pounds of cooked potatoes have a feeding value equal to about 100 pounds of corn, while from 500 to 300 pounds of raw potatoes are required to equal 100 pounds of corn.

Swine feeding experiments of the Oregon agricultural experiment station, in 1913, showed that steaming the potatoes increases their feeding value about 60 per cent.

Vermont experiment station bulletin 152 shows that the average analysis of potatoes is 78.9 per cent water, 1 per cent ash, 2.1 per cent protein, 0.6 per cent fiber, 17.3 per cent nitrogenfree extract and 0.1 per cent fat. The low protein content of potatoes makes It advisable to feed them in connection with feeds that are relatively high in protein content.

Unripe potatoes and sprouts of stored potatoes contain considerable solanin, a poisonous compound, and should not be fed.

Potatoes are palatable and well suited to horse feed. It is safe to feed as high as 15 pounds a day to workhorses. They are equivalent to about one-third of their weight in hay. When potatoes are fed, a legume hay is a desirable supplement. If a grass hay, such as timothy, is fed, the ration should contain feeds rich in protein, such as concentrates, legume hay, etc. It is advisable to chop the potatoes to lessen the danger of choking.

Cooked potatoes may be fed to cattle at the rate of from 25 to 30 pounds per day per 1,000 pounds live weight. The allowance should be lessened somewhat if they are fed raw, on account of their tendency to produce scouring. A heavy allowance of potatoes, however, produces milk and butter of poor flavor.

Hog-Raising Now Exact

Science, Says an Expert. Hog-raising is no longer a business to be undertaken without a good deal of careful study—such study as goes into the efficient management of any other industry. And hog-raising is becoming so important a feature on many farms in the West that attention to the little economies and small leaks often means the difference between success and failure.

One of the differences between success and failure often lies in the attention given to providing a mineral mixture for hogs, says E. F. Ferrin in a bulletin on "Care and Feeding of Swine" just issued by the extension division of the Minnesota College of Agriculture. A mineral mixture recommended by Mr. Ferrin consists of 20 per cent of common salt, 40 per cent of bone meal, and 40 per cent of air-slaked lime or ground Emestone. One ounce of potassium lodide to 100 pounds of such mixture should be given to prevent hairles; pigs.

It is attention to details like the foregoing that brings success. Science, as studied at agricultural colleges, has solved these problems, and has belped to bring hog-raising to something of the standing of a science.

Copies of Mr. Ferrin's bulletin may be had without charge by applying to the Office of Publications, University Farm, St. Paul, Minn,

Worm Remedies for Hogs

Are Given in Bulletin In a bulletin on minerals for live stock, scientists at the Visconsin experiment station suggest the use of oil of chenopodium (American wormseed) and castor oil as a substitute for santonin in treating pigs for worms. Santonin has lately become so scarce and high in price as to be practically unavailable for use as a worm remedy. As a substitute remedy for a 50-pound pig, the Wisconsin people suggest a dose of two cubic centimeters of oil of chenopodium thoroughly mixed with fifteen cubic centimeters of castor oil. Proportionate amounts should be used for larger or smaller pigs. This remedy is best given as a drench after withholding feed for 18 or 20 hours. Repeat the dose after a week or ten days.

If santonin can be secured, the Wisconsin experts recommend a mixture of 21/2 grains santonin, 21/2 grains calomel, 1 dram areca nut and 1 dram sodium bicarbonate. This dose is for a 50-pound pig and should be increased for larger animals. It may be given with a thin slop or in gelatin capsules.

Lambs Made by Canadians

A strong case against the buck lamb is being made by Canadian meat packers. Seventy per cent of the male lambs that come to the Toronto mar-Hall's Catarrh ket are bucks, say the packers, After the first of August buck lambs de Medicine will do what we velop an odor and a strong taste. than in early winter models but it rerid your system of Catarrh or Deafness served up it greatly discourages the phasizes the graceful wrap-around consumption of lamb. ings of this fur on the cuffs and a portion of the skirt. It is to be noted that the sleeves are somewhat small, but the odd new cuffs, ample end furtrimmed, lend them much style value. The skirt portion of the coat is shorter than in early winter models but it re-

mer mind-and thinks no more of winter. This is borne out by her gingham dress and her footwear. The cape is a substantial affair of a plain coating, brightened by bands of colorful trimming which extend part way down the front and back at each side. In front these bands terminate in silk ornaments-clusters of small balls, covered with taffeta silk. The banding is carefully placed on the collar, so as to fall in line with that on the cape, and round buttons are used for fastening. Slashes at each side, finished with bindings, allow the arms to be thrust through them.

There are some spring coats for juniors in attractive plaids and creas-bars, much like those for their elders, and the sweater and sweater coats are always to be reckoned with when between-season clothes are considered JULIA BOTTOMLEY

Oldest Historical Tree

The oldest historical tree (not the oldest tree) is one in Ceylon. It is known to have been planted, as a cutting from the Bo tree under which Gautama meditated, in the year 245 B. C. From that time to this it has been carefully tended and watered; its great branches are supported by pillars, and the earth has been terraced up about it so that it has been able to put out fresh roots continually.
