23. Bees' homes
24. Deface
25. Jested
26. Son of Jacob
27. Think over
28. Performed
29. Exclamation to frighten
30. Behold

Director Plans Speech Clinic For Next Year

Fred Lewis, director of the county speech therapy clinic, is already making plans for next year's clinic. He says that this year's clinic, which closed June 13, was the most successful yet. There were 41 students from Newport, Morehead City, Beaufort and Smyrna. The clinic is sponsored by the Carteret County Society for Crippled Children. The sessions were conducted at the Morehead City recreation building, use of which was donated by the recreation commission. Mr. Lewis says that he wants to have two-week-long clinics at Newport, Morehead City - Beaufort, Smyrna-Harkers Island and Atlantic. Children attending all the sessions would have eight consecutive weeks of individual attention. Of this year's pupils, about 75 per cent were enrolled last year. Teachers were Miss Gertrude Styron, Ralph Wade, Mrs. Sammie Williams, Mrs. Ben Arrington and Mrs. Lucille A. Smith. Mrs. Smith was added to the faculty after 55 students enrolled for the clinic. Some of the boys and girls could not attend because they could not get transportation.

Church School Ends with Picnic

Vacation church school at the Marshallberg Methodist Church ended Friday with a family picnic at Fort Macon Park. Songs learned by the boys and girls during the week were shared with the congregation during Sunday School Sunday. Attendance was good in all classes, and three of the classes met in the new education building of the church. The primary department was taught by Mrs. Vilma Willis, Mrs. Rosemarie Rose, and Miss Barbara Hill. The kindergarten was taught by Mrs. Lula Davis and Mrs. Janice Conway and the nursery was kept by Mrs. Sally Johnson. There were two junior classes taught by Miss Annie Moore Piner, Mrs. Minnie Moore, and Miss Claudia Brown; and the other taught by Mrs. Esther Valentine, Mrs. Joyce Moore, and Miss Rita Carroll Harris. The intermediates were taught by the pastor, the Rev. W. M. Jeffries, Mrs. Louise Lewis, and Miss Carolyn Gillikin. The school was directed by Mrs. Cecilia Harris. Refreshments were furnished by women of the church. Recreation for each night is being planned by a committee with Sally Hooper as chairman. Other members are Carolyn Gillikin, Linda Willis, and Bobby Davis. A registration committee consists of Barbara Hill and John Hill. Special projects will be promoted by a committee composed of Sandra Davis, Becky Brown, Sally Harris, Keith Willis, Barbara Hill, and Mike Harris. Publicity is in charge of the publicity chairman, Jane Lee Thomas, and her committee, Nancy Valen-

Port Calendar

Nabob - Docked Friday and sailed Saturday with a cargo of tobacco for Hamburg, Amsterdam, Antwerp, Bremen and Rotterdam. Pedro DeValdivia - Docked Saturday to load CARE cheese for Spain. Southport - Docked yesterday to load tobacco for Antwerp, Bremen, Hamburg and Rotterdam. Gertrude Torm - Due Thursday to load tobacco for Alexandria, Egypt, and other Mediterranean ports. Erlangen - Due Friday to load tobacco for Amsterdam, Antwerp, Bremen, Hamburg and Rotterdam.

Lions Officers To be Installed

Elmer C. Watson will be installed as president of the Morehead City Lions Club Thursday night. Retiring president J. B. Eubanks announced plans for the installation at the Lions meeting at the Hotel Fort Macon Thursday night. The Lions will observe ladies night and the meeting will begin at 7 p. m. instead of the usual hour. In addition to the installation of officers, a special program has been planned. New officers are Mr. Watson, C. W. Williams, first vice-president; O. J. Morrow, second vice-president; Harry Van Horn, third vice-president; Otis Jones, secretary; H. J. Hedgecock, treasurer, and John D. Willis, Lion Tamer. Owens Frederick was re-elected as tall twister. Jack Morgan and David Munden were elected to the board of directors. O. N. Allred was in charge of Thursday night's program. He introduced M. Leslie Davis of Beaufort. Mr. Davis, who collects pictures of famous people, brought a portfolio of pictures with him. He told who the people were and how he happened to get the picture. Many of them were autographed for him.

Effect to Cause Idaho Falls, Idaho (AP)—A. E. Browning discovered why his daughter couldn't start the family car. Someone had stolen the generator.

Venus Fly-Trap - Strange Plant Lives in This Locale

(Editor's Note: The following article on the Venus Fly-Trap was published recently in the North Carolina State College Collegiate Newsletter, prepared by the Horticultural Club of the college. The writer, a rising senior at State, is the son of Mr. and Mrs. James L. Crowe, Beaufort.)

By JIMMIE L. CROWE JR. few meals ever escape from its grasp. Now the bristles on the outer edges come into use. They interlace like the fingers of the hands when clasped together. This is to prevent the victim from escaping. As these bristles are evenly spaced along the outer edges, they play an important part in helping to determine if the victim is large enough to supply nutrient value, because if the victim is too small it can escape through the space that is left when they are interlaced. This also helps the Venus Fly-Trap to conserve its energy by not wasting time on consuming a victim that has little food value. Once a victim is trapped and cannot escape, the trap begins to secrete an unknown substance that dissolves the fleshy parts. Actually, the victims do not suffer, as the substance seems to kill them upon contact. After digesting the captive, the trap reopens and prepares for another catch. Another amazing feature of the trap is that, upon opening, you will find a perfect skeleton of the victim. This impresses upon one the great strength of the traps and yet the gentleness it seems to possess. Skeletons of small frogs have actually been found within some of the traps. The Venus Fly-Trap reproduces sexually. In the spring of the year it sends up small, white, daisy-like flowers. There are only five petals to a flower. Upon pollination, the seeds are formed within a small capsule. They are very fine and shiny black in color. This is the only means that the Venus Fly-Trap has for reproduction. Many people have tried to grow the Venus Fly-Trap in their home, but no one has really succeeded in doing so. In its natural habitat, and from what I have observed, the plants grow in a peat muck which has been formed mostly from grass sedge and where there is running water, as it will not tolerate stagnant water. During the growing season, the temperature is usually about 70 de-

Long Service Oxbow, Sask. (AP)—A. W. Young, first elected in 1918, has been re-elected to his 43rd consecutive term as secretary-treasurer of the Alameda Agricultural Society.

Classified Ad Gets Results - Of Sorts

Jerry Murphy, better known as Murph, ran an ad in THE NEWS-TIMES to sell his sightseeing boat, the Islander. Following the second insertion of the ad, he was accosted by an almost breathless man who had chased after him for more than a block on the Morehead City waterfront. "See you have your boat for sale," the man gasped. Murph had quick visions of a quick sale. "It's that soft drink cooler you have aboard I want to buy." "And, so there I was," says Murph, "dreaming of a deal in thousands but reduced to thinking in terms of 75 cents." Sign of the Times Oklahoma City (AP)—The following sign was posted in a store here: "Please do not use this fountain to fill water guns."

Marshallberg MYF Plans Week of Youth Activities

NCA

(Continued from Page 2, Section 2) Tax records show that in 1956 there were 3,358,296 pounds of shrimp processed, heads off, in North Carolina, as compared to an increased figure of 3,710,061 pounds in 1957. The catch prior to the 1955 hurricanes was 5,751,300 pounds for that year. Political Hassle? Stories on the controversy appearing in the Florida newspapers indicate heavy political overtones, particularly a long statement printed from Lewis Fischer, a former president of the Southeastern Fisheries Association, representing the Florida industry. Mr. Fischer took sharp issue with Florida State Senator William R. Neblett because of the original statement issued by him which touched off the unpleasantness, saying that he would call for the abolishment of the law which closed the Tortugas area. The Tortugas area, 20 miles off the west coast of Florida, was defined by the Florida legislature as being a part of the salt waters of Monroe County, Florida. The charge brought against the violators is for dragging shrimp nets in a prohibited area of this county, the Tortugas. Research by the University of Miami Marine Laboratory has indicated that the shrimp in the Tortugas area originate in the Everglades National Park, and tracking stations have given strong evidence to substantiate this. The experiment and research is still in progress without definite conclusion, and NCA President Roy Watson said that the state of Florida is doing a highly commendable job in this research. He added that the North Carolina fishing industry is highly in favor of any properly administered project and will certainly cooperate to the fullest degree in such, although there may be a few of the fishing fleet which will not cooperate, as has been indicated by the small number of indictments of Tar Heels. Fishing vessels from six states operate in the Tortugas area. It has been reported that federal charges of attempting to ram government vessels will be leveled against four trawlers, none of them from North Carolina. It is estimated that approximately 30 per cent of the winter shrimping fleet, about 125 boats in the Key West area, is comprised of North Carolina vessels, and local Florida interests are alarmed that this fleet may be moved from Florida, causing a great loss to the Florida fishing industry. A study of the problem will be made at a July 19 public hearing of the Fisheries Committee of the Department of Conservation and Development at Morehead City.

UNC Graduate Student To Assist Dr. Williams

George Bryce, a graduate student at the University of North Carolina from Hamlet, began work at the Institute of Fisheries Research last week. Mr. Bryce is assisting Dr. Austin Williams, who has been commissioned by the National Science Foundation to revise a 1918 edition of a book on crustaceans of the South Atlantic Coast. We may not be the wealthiest county in the state, but we can be the cleanest. Don't throw trash out car windows.
