If you have not checked your corn for insect damage, it would be a good idea to do so, as army worms are being found in corn throughout the county. These same army worms can be found in soybeans, along with the Mexican bean beetle and will cause a great deal of damage by cutting the foliage and the beans off the bean stalks. Where 10% DDT applied as a dust at the rate of 10 pounds to the acre, good control has occurred. These insects can cause terrific damage if left unchecked, so it is just plain good farming practice to check your corn for this type of insect.

SUNDAY SCHOOL LESSON

Give this people freedom from their captivity. It seems that Cyrus was a great hand to cultivate the various gods worshipped by his conglomerate peoples although Darius was his own personal deity and he never accepted Jehovah as a God. The Jewish people, however, were quick to see God's hand behind Cyrus as the king granted them their freedom and, in this case, to them he was "anointed." While the political motive of creating a loyal buffer state between the kingdom and Egypt may have contributed to Cyrus's determination, yet the desire to cultivate the God of the Jews by re-establishing them in Jerusalem undoubtedly appealed to him considerably. All this reminds us of the Psalmist, who declared, "God works in a mysterious way his wonders to perform." We are given few details of the arduous journey of the exiles to their homeland. They had to travel 800 miles or more, a journey which took approximately four months to make. Psalm 126 tells of the joy they felt at their safe arrival. Read it and rejoice with them.

SOIL CONSERVATION NOTES

Elmer Lasiter and Lyndon White, who own a farm in the White Mill Pond section of the county, plan to establish a complete drainage system on their farm this fall. The small ditches on the farm are in bad condition and they are arranged so that the fields have a lot of short rows. Lasiter and White plan to cut parallel ditches with a shaped bucket. These ditches will be spaced at the proper distance apart and will be cut deep enough to provide good drainage.

T. C. Whitehurst cut a drainage ditch in June to drain some low flat land in the back field of his farm. Mr. Whitehurst stated that the ditch had been carrying the water off very good during the big rains we have had since June. It is time to start planning for winter cover crops. Cover crops are a big help in maintaining and improving the fertility of the soil. Winter cover crops offer the following advantages:

- 1.—They grow in periods when the fields are left bare.
- 2.—They prevent leaching and washing off of the fertilizer remaining in the soil. They take up some of this fertilizer and return it to the soil after they are turned under.
- 3.—Winter legumes add some nitrogen to the soil.
- 4.—They furnish some winter grazing.
- 5.—They help prevent wind erosion where this is a problem on sandy land.
