

**KNOW YOUR SOCIAL SECURITY**

Earl W. Trinkle, representative of the Social Security Administration, is in Hertford the second Wednesday of each month at the Perquimans County Court House.

Children of qualified retired, disabled or deceased employees may be eligible for Social Security protection. This means that minor children under age 18, and disabled children of any age, if the child was disabled before he became 18 years old, may be eligible.

The provision is not limited to natural children, but also includes stepchildren and adopted children. In order for a child to be eligible for payments the parent must have a certain amount of work to his credit under the Social Security. This length of time depends upon when the wage earner reached retirement age, becomes dis-

abled or dies. No child of a living wage earner can qualify for payments, however, until the parent has filed claim for his own benefits.

Certain proofs are required to establish a child's eligibility to payments. The child's birth certificate must be furnished in order to establish his age and relationship to his parent. In the case of a stepchild the marriage certificate must be presented also to establish the relationship, and if a child has been adopted, a copy of the adoption order must be submitted. Medical evidence is necessary to establish the disabled child's rights to disability payments.

ward safe disposal of excretory wastes. Where campground toilets are provided this is no problem, except where carelessness or disrepair leaves such facilities exposed to flies, or more rarely, contamination of the ground surface. Under such circumstances it is good insurance to make repairs, disinfect or move to safer ground.

Under big-woods and wilderness conditions, the shovel is the standard disposal tool. In back-country camps a shovel with a roll of toilet paper slipped onto the handle is a common sight; and safety in disposal, with this simplest of all methods, merely requires the lifting of a few shovelfuls of earth and replacing it after use.

A more satisfactory disposal system, especially for groups spending a week or more in camp, is the field latrine. This is the standard disposal method in military bivouacs, and consists merely of a trench dug in the ground with the loose soil banked at one side. The "slit" need not be more than a foot wide or two feet deep; it may be of any length.

In all cases toilet paper should

WHERE THE BARN WAS—A homeless goat wanders amid rubble left by a tornado that swept through Wilburton, Okla.

be kept at the site, on a small including dishwasher, is also important in maintaining a clean, healthful camp. A garbage pit 100 feet or more from the tent door, properly covered and preferably exposed to full sunlight, is a good solution. Don't compromise on size; have it big and deep enough. One cubic foot per person per week, beginning one foot below the ground surface, is a good rule-of-thumb.

Dogs are natural fly-tractors in any warm season. Sprays, cleanliness induced by soap and water, and prompt disposal of droppings, meet the sanitation

problem in a practical way. Breaking camp provides the final test of the camper's discipline out-of-doors. More often than not camps are broken hurriedly, sometimes in the onrush of darkness or even at night. Then, the temptation to toss garbage and tin cans aside is stronger than at any other time. He who leaves an untidy, waste-strewn campsite under such circumstances, however, far back, must be regarded as careless, or ignorant, or both. But the camper who makes certain that the latrine is closed, that garbage and tin cans are buried, and that the site is left neat and uncontaminated, not only demonstrates his responsibility outdoors, but leaves a safe and attractive place for the next camping party.

**HIGH WHEAT PRODUCTION**

Wheat production for North Carolina is estimated at 7,682,000 bushels—up 139,000 bushels from the April 1 forecast, according to the N. C. Crop Reporting Service. The current estimated production is down 18 percent from the near record crop of 9,353,000 bushels produced in 1959. This year's acreage for grain harvest has been estimated at 334,000 compared with 398,000 in 1959. Yield per harvested acre is indicated at 23.0 bushels compared with 23.5 last year and 20.4 for the 10-year 1949-58 average.

**Cash Receipts From Poultry Down 11%**

Despite an increase over 1958 in sales of poultry and eggs, North Carolina cash receipts for 1959 from these sources were down 11 percent. Lower prices for all commodities involved were responsible for the decrease. Greatest reductions occurred through the sales of broilers and eggs. Cash receipts for broilers at \$68,920,000 were down \$9,256,000, while the \$54,005,000 received for eggs was down \$7,381,000.

Although 9,240,000 more pounds of broilers and 145,000,000 more eggs were marketed than in 1958, the average price of broilers per pound was off about 14 percent, while price of eggs per dozen was off 19 percent.

Total receipts from the sale of "farm" chickens and turkeys showed an increase because volume of sales offset reduced prices, but income from these items was minor in relation to that obtained from broilers and eggs.

**EGG PRODUCTION DOWN**

Production of eggs on North Carolina farms during April totaled 180,000 million, a decrease of 8 million from the previous record high production during April, 1959, according to the North Carolina Crop Reporting Service.

The decrease in egg production is attributed to a slightly smaller number of hens and pullets of laying age on farms during April and a lower rate of lay. Hens and pullets of laying age totaled 9,700,000 com-

pared with 9,830,000 a year earlier. Production per 100 layers during April is estimated at 1,860 eggs compared with 1,908 in April, 1959.

**COPELAND - HOLLOWELL**

Mr. and Mrs. Wilson Hollowell of Hertford announce the marriage of their daughter, Sara Elizabeth Hollowell, to Johnny Lee Copeland of Edenton, son of Mr. and Mrs. Nathan Copeland. The bride's dress was of white lace on satin, with blue matching accessories. The wedding took place Saturday, May 7, in Dillon, S. C. They used the double ring ceremony.

**SPORTS AFIELD**  
By Ted Keating

Camping is increasing prodigiously. In 1958 about 68 million visits were recorded on the national forests alone—three times more than in 1946. This volume and intensity of public camping ground use, coast to coast, is staggering. Use alone, to say nothing of health and common decency, dictate that cleanliness on the nation's camp-grounds be improved and upgraded.

Despite inadequacy and disrepair of sanitary facilities on some public camp-grounds, no serious epidemic has yet arisen from them. That's because the basic rules of human sanitation are presently being met. In the May issue of Sports Afield Magazine, Lee Yeager discusses a few principles governing waste and garbage disposal.

In the camps of hunters, fishermen and families, the first thought should be directed to-

**NOW LOOK WHAT CORVAIR'S GONE AND DONE!**

The same Corvair that tallied a thumping 27.03 miles per gallon\* in the Mobilgas Economy Run... went right on to climb Pikes Peak earlier in the spring than any car has ever tried!

We wanted to show you what the fabulous traction of Corvair's rear-engine design and the sure-footedness of four-wheel independent suspension really mean. So the identical Economy Run car went right on to 14,110-foot Pikes Peak—and right up to the top of that savage mountain, on April 15, still deep in winter's snow and ice. No other car—even specially equipped—had ever been able to conquer that nightmare alpine road so early in the spring. But Corvair (with United States Auto Club officials aboard to certify that not one nut or bolt was changed) purred right to the summit without chains or even snow tires! That just underscores the fact that Corvair is totally unique. But you'll find that out the first five minutes you're at the wheel!
