

County Progress To Be Exhibited At State Fair

Only about six weeks remain before the 1940 N. C. State Fair opens in Raleigh on October 8, and counties are being urged to begin preparation of their progress exhibits which again will be one of the features of the fair.

F. H. Jeter, agricultural editor of N. C. State College, is chairman of this department of the fair, and he announces that premiums totaling \$2,000 are being offered for the 10 best county progress exhibits. The first prize is \$650, the second prize

fifth \$100, and sixth thru tenth prizes \$50 each.

Jeter said that, as in the past, county farm and home agents will take the lead in arranging the exhibits. However, he said it is desired that vocational teachers, school superintendents and principals, boards of trade and chambers of commerce, manufacturers, civic clubs and women's organizations have a part in planning and preparing the exhibits displayed.

The exhibit should be prepared to cover 70 running feet of space. It will be judged, 35 percent on the attractiveness of the exhibit, 30 percent on the balance of the display, 20 percent on how representative it is of the county, and 15 percent on the quality of the materials.

growth in both personnel and funds spent by federal and state governments for agricultural research, the annual expenditure now is less than \$45,000,000 for the United States.

Lime Should Precede Seeding Of Legumes

The best time to apply ground limestone is from three months to one year before seeding legumes. That is the advice that Western North Carolina farm agents are giving growers, and E. C. Blair, State College Extension agronomist, says it is good advice for all parts of the State.

Blair said that C. Y. Tilson, Burcombe County farm agent, recently prepared recommendations for correcting soil acidity in the mountain area, as follows: If lime is applied from three months to one year before seeding legumes, it gives the lime sufficient time to contact acid in the soil particles and counteract it.

The application of lime to cultivated land should be made after plowing, and the material should be mixed with the topsoil. Little benefit may be expected if lime is plowed under before being properly mixed with the topsoil. On pastures it is only necessary to scatter the lime on top of the sod; however, better results will be obtained if it can be worked in by light harrowing.

For most soils in the mountain area, the following amounts of lime are needed for various crops: Alfalfa, 3 to 4 tons per acre; red clover, 2 to 3 tons per acre; pastures 1 1/2 to 2 1/2 tons per acre; and general crops, 1 1/2 to 2 tons per acre.

The appearance of broom sedge, sheep sorrel, running briars, plantains, and moss in and around the edge of fields is a good sign that the land needs lime. The use of lime, plus phosphate, applied to broom sedge pastures has resulted in blue grass and white Dutch clover gradually taking hold. The lime and phosphate restore the soil fertility where there is broom sedge to the extent that the sedge is made palatable and grazed off or crowded out by blue grass, and not killed by lime as is sometimes thought.

THE HERALD — \$1.50 A YEAR

Notice Of Sale Of Property For Unpaid Town Taxes

In pursuance of law I will sell at the City Hall in the Town of Kings Mountain, N. C., beginning 1:00 P. M. Monday, September, 9, 1940, for unpaid 1939 Town Taxes, the following described lands. Name of owner, description of land and amount of taxes are in each case lands owned by the tax payer in the Town of Kings Mountain, N. C., April 1, 1939. There will be in each case the amount of cost and penalty which must be added to the taxes. This sale may be continued from day to day or to such time as may be fixed according to law in the event said sale is not had or completed on the date above specified. This the 12th day of August, 1940.

Huge Improvement in Gulf Gasolines

To measure the quality of a gasoline, no hocus-pocus is needed. There is a scientific test that shows the comparative anti-knock value of any motor fuel. The shorter figure above represents the former "mark" in that test of GOOD GULF. But look at the second figure! It shows precisely how much the NEW GOOD GULF has been stepped up—a step up so great that this great gasoline now surpasses North Carolina specifications for premium fuels. Try Good Gulf and see what a difference it makes in your car.

Above, at left, is the pre-improvement "mark" of GULF NO-NOX—for years one of America's best premium gasolines. But hang on to that hat again as you look at the other figure! It shows how much GULF NO-NOX has been lifted over its old high—a high that by far exceeds North Carolina specifications for premium fuels. And when you consider that the old NO-NOX was knockproof under all normal driving conditions, you will marvel at the performance this new gas gives. Introduce your car to Gulf No-Nox today at the Sign of the Gulf Orange Disc.

FREE! "21 Ways to Save Money"—This helpful booklet is yours for the asking at your local Good Gulf dealer's. Get yours, at the Sign of the Gulf Orange Disc!

Better try these Better Fuels

BOTH GOOD GULF AND GULF NO-NOX EXCEED NORTH CAROLINA SPECIFICATIONS FOR PREMIUM FUELS!
