

125 Cases TB Found In Cleveland Survey

Final statistics of the Cleveland county tuberculosis survey were released today showing that 125 cases were found, 86 of which were previously unknown. All of these were referred by the U. S. Public Health Service to local physicians.

Of the total number immediate hospitalization was recommended for 14. Other than TB cases, 92 were found to be suffering from chest diseases, most of which involved malfunctioning of the heart.

County health officials said that the survey technicians, who completed their work Saturday, left 19 x-ray films termed as "suspicious" for examination of private physicians. These were film reakes which indicated possible tubercular infection.

Dr. G. E. Geheber, U. S. physician, who directed the 25-day program with the cooperation of Dr. Herbert A.

Hudgins of the county health office and members of the local tuberculosis association, stated that even though the total number x-rayed, 26,605, was less than the anticipated goal, it remained a marked success on a par with that achieved by Gaston county.

ASSISTANCE

The Selective Placement Program of the United States Employment Service assists disabled veterans and other handicapped workers to locate the right jobs in their home communities. It has been proved that qualified handicapped workers are often more efficient than able-bodied employees. USES officials say that "IT'S GOOD BUSINESS TO HIRE THE HANDICAPPED." Why not investigate this more fully by calling the local USES office today? List that Job with USES. It's an excellent way to do your share for "National Employ the Physically Handicapped Week."
