Short Leaf Pines May Be The Crop For Idle Acres

Farmers and other landowners in North Carolina who would like to put idle acres to work next fall may be interested in a newly revised farmers' bulletin on Short Leaf Pine.

Prepared by the Forest Service of the U. S. Department of Agriculture, the bulletin describes shortleaf pine as a desirable and profitable crop tree, of rapid growth, and producing high-quality, soft-textured wood. Though it grows more rapidly on good soil, it can be established successfully on broken, steep, or worn-out land. It reproduces itself easily with abundant seed crops. The trunk is characteristically straight and clean.

The bulletin makes many suggestions about how to plant shortleaf pine, good management practices, methods of judging the board feet that can be cut from logs of various sizes, thinning of trees, and uses to which logs of various sizes can be put.

A single copy of Shortleaf Pine, Farmers' Bulletin 1671, can be obtained free by writing to the Office of Information, U. S. Department of Agriculture, Washington 25, D. C.
