Vol. 2 APRIL, 1920 No. 7

Your Neighbors

We are always interested in having good neighbors. We want people living next door and across the street with whom we can be friendly, people with whom we like to associate. But the word neighbor has a broader meaning. In a town the size of Badin, the word neighbor includes everybody in the community; and Badin will be a good place in which to live exactly in proportion to the number of good solid citizens we have in the town.

If we could choose our own neighbors, we would many times choose old friends, people whom we knew on other jobs, some of the "home folks;" and we can now do this. The company has devised a plan whereby we can get our old friends for neighbors, and *get paid for it*. It does not want men only, but good men; and it is a hard proposition to go into a strange community and hire good men for a job like this.

In the first place, the man who is out getting men for the company does not know the men he hires, personally. He has to depend on his judgment. In the second place, he usually goes to the larger cities, because that is the only way he can get the number of men needed. The kind of men that this company wants are already working, have steady jobs, and are not easily reached by the labor agent.

Roughly speaking, the men coming to Badin can be divided into three classes:

1. Men brought in on transportation.
2. Men who came of their own accord.
3. Men who came because some of their friends had told them about the work.

The best men are from the two latter classes; but there are too few coming this way. The company would like to get more of them, and for this reason has made a generous offer to men already working here to help get their friends here, too.

You are offered a *double opportunity* —to choose your friends, and get paid for it. All you have to do is to see the Employment Department, and get started right. *How about it?*

—R. E. P.

We are glad to see Mr. James Council back on the job again, after a two weeks siege with the flu. He informs us that it has flown.

Welcome—Au Revoir

To our distinguished visitors from Pittsburgh and New York, who were here on the first and second of March, we scarcely had much more than an opportunity to say "Welcome," and "We hope to see you again," and they were gone. Some of us, busily engaged with the "flu," had not even the privilege of a glimpse of them.

We trust, however, that this visit will not be the last, and that our *au revoir* will be a hope "to see you again" realized in the not distant future.

To some of our readers, a bit of information concerning these visitors may not be unwelcome.

Mr. A. V. Davis is president of the Aluminum Company of America, which is now operating seventeen plants (of which Badin is one) in the United States, Canada, and South America. It is hardly necessary to add that he is one of the master minds in the world of big business.

Mr. R. B. Mellon is one of the two brothers who own and run the Mellon National Bank, of Pittsburgh, one of the great financial institutions of the nation.

Mr. Roy A. Hunt, vice-president in charge of aluminum fabrication, is one of the directors of the Company.

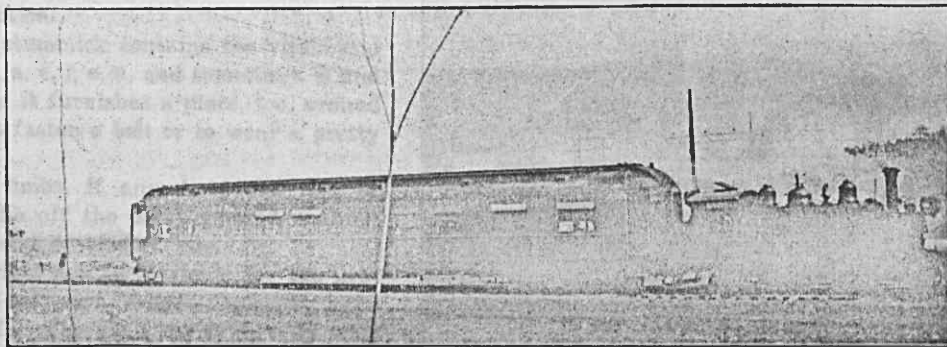

Mr. E. K. Davis, of the Aluminum Company of America, is vice-president in charge of sales.

Mr. J. W. Rickey, chief hydraulic engineer of the Aluminum Company of America, is the man who planned the dam at the "Narrows," and also the Cheoah dam. The Narrows dam alone is a splendid achievement.

Opportunity for Badin Boys

Professor Thorndike Saville, who occupies the chair of hydraulic engineering, in the University of North Carolina, accompanied by several men of the class in Waterpower Engineering, and a number of seniors in Electrical and Civil Engineering, recently visited Badin. They were much impressed by the magnitude and capacity of the hydroelectric development here.

The visit of these gentlemen from the State University emphasizes an instructive fact, viz.: that we have right here in Badin the best advantages in the world for practical education along certain important and remunerative occupational lines. No college or university shops and laboratories could possibly equal the opportunities offered here for

"WELCOME"

The Private Car, "New York," which brought President Davis and his party to Badin
