

cash and fifty dollars each year that she remains speechless. Kindly notify us a week in advance.

NOTE—This is the last of the series of lessons on rotary station equipment.

From the Electric Shop

Roxy's answer to the question of where he contracted chills: "Say, Fellows; that was some chill; and if you will take a trip to Building No. 7 during one of the Captain's political discourses, the vibrations of sound waves emanating from that prince of orators will not only give you the shakes, as it did me, but you will readily see why they had to put steel reinforcing around the smokestack at the Carbon Plant."

Mr. C. M. Ramsey, of Mr. Graham's crew, had the misfortune to get hit on the head by a piece of the tile roofing that fell from the top of the new Pot Room a few days ago. But luckily for Mr. Ramsey he did not get the full benefit of the fall.

Mr. W. H. Cline, one of our trouble men, has left us. Mr. Cline had been with us for a good while, and we hated to see him go; but we wish him much success in his new job.

Mr. W. M. Myers says that he has already had one proposal of marriage, and leap year is not half gone yet.

Shorty Baumgardner has been away for several days, on a trip to New York.

Narrows Power House

We really need co-operation more now than anything else. I would suggest, after the electrical school closes, for all parties concerned in the operation and efficiency of the power-house to get together as much as once every two weeks and talk things over, going into detail, explaining fully the layout of the station, the characteristics of the electrical and hydraulic machinery. This would prove a benefit to all concerned. The beginners would have a better chance to learn, and the others who are familiar with the station would keep freshened up.

After having a couple of months of high water, more than we could utilize, the flow of the river has fallen back to normal, and we are utilizing the whole source, carrying a load of approximately, as indicated by meters, forty-five thousand kilowatts; total output for twenty-four hours aggregating one million kilo-

SHOWING HOW T. HAM HAS A WAY OF GETTING HIMSELF SURROUNDED BY BEAUTIFUL SCENERY

watt hours. Under present conditions, normal flow of water and moderate weather, the efficiency of the station is at its highest. I must say, at present, this is an exceptionally good period for generating stations in this locality.

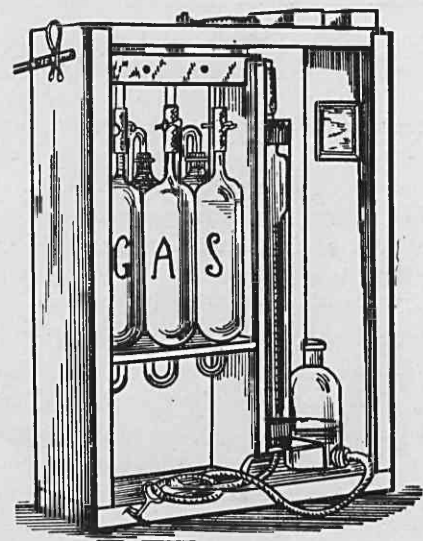

The dredging of the tailrace will no doubt take place in the near future. The engineers are getting things ready. Mr. Rice and force have been busying themselves for the past month looking over the situation, taking cross sections and sounding. It is not known yet just who will get the contract to do the proposed work, but we rather suspect that B. H. Hardaway Contracting Company, of Columbus, Ga., as the dam was built by the Hardaway Contracting Company.

The order for the D. C. generator for No. 2 unit has been in for some time, but the General Electric Company hasn't been able to get it out yet. Mr. Gomo expects to have the D. C. generator here by the first of June, and the installation of same to take place immediately.

No. 1 exhaust fan is to be installed some time soon. The concrete base for the D. C. motor and fan has been ready for the past two months. The installation of the fan has been delayed due to shortage of material.

Gomo ran off with the band to Mount Pleasant, and stayed three days. If happenings like this continue we wouldn't be surprised to hear of Clark's wedding announcement.

LABORATORY

Mr. H. V. Churchill and Mr. R. C. Bromelmeier visited the laboratory recently, the purpose of their trip being to check up on chemical apparatus used at this place.

E. F. Curlee has accepted a position as assistant in the metal room. Curlee worked with us during the summer and fall of 1918.

Mr. N. T. Clodfelter has reconsidered, and will not leave the laboratory as announced in last month's BULLETIN.

Mr. W. G. Dotson's youngest sister was a recent visitor to the laboratory.

J. O. Cherry has returned to work after a few days' illness.

—H. A. L.
