If this is a scenario you know

well, then you may be one of

the estimated 25 million people

who suffers from some type of

winter depression, according

to "Winter Blues" by Norman

E. Rosenthal, from the Na-

tional Institute of Mental

Winter depression comes in

two degrees of severity, said

Fred Turek, chair of

Northwestern's department of

neurobiology and physiology.

Turek, who is also director of

the Center for Circadian Biol-

ogy and Medicine at NU, said

some people with mild winter

depression suffer from the

"winter blahs," while others

with severe depression suffer

from what is called "Seasonal

Turek, who has studied how

seasonal changes and the length

of days affect humans' and

other animals' reproductive

cycles, hibernation, and mi-

gration, said lack of sunlight-

not cold temperatures-may be

a major cause of winter depres-

sion. He said about 15 years

ago, scientists began to notice

symptoms of clinical depres-

Affective Disorder" or SAD.

the TV with Geraldo.

You haven't seen it in days.

sound of your blaring alarm.

Maybe someone else should grow up

and hoopla happening in the residence halls. I've been annoyed by piercing laughter and hysterics at 3 a.m. It's a nuisance to all students. Yet, this immature behavior has participants of all ages and class ranks. I can't count the numerous times I've seen upperclassmen (as well as freshman) play the "Let's sneak beer in" game and then throw loud obnoxious dorm parties. A review of past write-ups demonstrates it's not all made up of freshmen offenders. But it's easy to blame freshmen. But, in case you forgot, immature behavior is not limited to freshman year.

I un- Also, intro courses are taken by derstand all too well the antics all ranks of students. The degrees of difficulty are determined by the professor. Ever had Dr. Maas?

It's sad that your editorial board with all its maturity and wisdom decided to write a condescending, arrogant, basically petty attack on freshmen. Disclaimer or no disclaimer, your editorial was offensive and disrespectful and it offended a lot of people.

I'm surprised people in your field haven't learned to reach intended readers in a positive and constructive approach. Unless, it was your goal to insult and anger the freshman class. If that was your intention, well, all this youngster has to say is grow up.

Sincerely,

UNCA Freshman

Turek said. "Look, it's already

dark out. I'm getting depressed

just looking outside," he joked.

Turek said exposure to artifi-

cial bright lights has curbed

depression for some people.

"These are special lights with particular wavelengths," said De Vryer. "You sit in front of these lights at a particular distance for about an hour each day, with your eyes open. In a week or so, most people can tell if it makes a difference."

Symptoms of the "winter blahs" include minor depression, and other behavioral changes, such as minor weight gain, oversleeping, tiredness, inactivity, increased stress and irritability, illness, and sadness, he said.

A recent Chicago Tribune article said that many people with the mild winter blahs start overeating in October, gaining an average of 5.5 pounds in the winter season, as they eat more carbohydrates, fats, and sugars. Some scientists say they think this may be related to an animal instinct to bulk up before the 'scarce' winter season.

Eric Haar, who has worked at Dan'z Cookies for over a year, said there is a marked increase in cookie sales when winter sets that people suffered from the in.

"Some people, when they get food," Haar said. "Everyone climates. University Registrar ent in three months."

"What is causing the blahs? During the spring thaw, there is a little decline in business."

> Turek said those who suffer from SAD experience seasonal changes that significantly alter their daily lives, such as major weight gain, desire to hibernate, excessive tiredness, changes in personality, and other symptoms that won't allow them to carry on their normal routine.

Winter depression, in both its forms, is more common in the northern United States, where the duration and intensity of sunlight decreases in the fall and winter, according to Rosenthal. His studies have shown that between the 40 and 50 degrees latitude lines, which includes cities such as Chicago, Boston, New York, Seattle and Minneapolis, about 18 percent of the population suffers from SAD and 37 percent suffer form don't get any more homesick milder winter blahs.

Between 25 and 35 degree latitude lines, which includes such southern cities as Atlanta, Dallas, Houston, Miami, and Los Angeles, only about 5 percent of the population suffers form SAD and 18 percent form the winter blahs.

At Northwestern University, De Vryer said winter is a busy quarter at the counseling center. There are 15 counselors who helped more than 1,000 students last year.

"When the weather starts being cold and unpleasant, it can cheers me up.' be one of the factors that can people," she said. "Despite the fact that spring comes, people sometimes still don't feel bet-

likes to stay in, and we deliver. Donald Gwinn said the number of undergraduates typically drops off a little bit in the winter. Gwinn said there were 7,603 students in the fall of 1994, which dropped to 7,498 in the winter-a loss of 105 stu-

There are many reasons to account for this loss-graduating seniors, study abroad or university dismissal-but some students' departures may be due to depression and winter blahs.

Students from warmer climates said they have mixed feelings about the harsh Midwestern winters.

"Last year, the winter was a novelty," said Jonathan Koshiba, a NU sophomore who is from Honolulu, Hawaii. The snow was cool, and it was kind of fun. Now it's kind of cold. It makes you wonder why you chose this school. But I during the winter than during the rest of the year. I get homesick like everyone else.

Education sophomore Joanne Park agreed that playing in the snow of the winter season is fun-for a while.

"I try to make myself happy in the winter," said Park, who is form Laguna Beach, Calif. "I sit at home and play guitar. It is a little bet harder coming from Southern California. Wedon't' see the sun as often here as we do at home. Even if it's cold, whenever I see the sun here, it

Some students who have never make things worse for depressed before endured a Midwestern winter said they are looking forward to the winter as a

on a FORTRAN assignment 150 students — half our ratio. compiling a program.

The only other solution at which I arrived requires some money. I attempted to get information about our modems at UNCA to no avail. Therefore, I will speak from my own limited knowledge. As far as I know, we have ten modems available for faculty, staff, and student use.

To make a future comparison somewhat easier, I will restrict recent boom in Internet intermy discussion to only students. Fall 1995 census data, courtesy of Dr. Eric Iovacchini, indicates an enrollment of 3,222 students. Let's make the math easy and say an even 3,000.

A little division indicates one modem per 300 students. In my opinion, that's not a great other aspects of the Internet ratio. A friend of mine attends Middle Tennessee State Uni-Between the hours of 5 p.m. versity. I asked him to acquire mit that with minor effort, the similar data for his school. Currently, 18,000 students share 80 modems, with an additional

picture.

If our computer science department would spend no more than \$1500, we could upgrade and double the number of available modems. If we had 20 modems available, our ratio would decrease to 1:150.

It is of utmost importance for our university to provide convenient access to the Internet.

No one really expected the est, but it has happened. Truthfully, a world of information awaits you on the information superhighway.

Take just a moment and think of something you would like to know. Got it? I bet it can be found on the Internet. Many make it tremendously helpful, and almost a necessity. I subuniversity's modem situation could be resolved.
