

Look in Mirror

Continued From Page 2

action that can really bring about positive effects. This is especially so at St. Andrews because of its small size.

St. Andrews is a good school considering the problems that higher education is suffering through across the country. Yet, as with most everything it could be better.

In community of this small size and nature, the fact that things could be better but are not is a problem that all students should take a great deal of responsibility for.

We must stop accepting what is as necessarily the correct way of doing things. We must look at what we want from our four years here at St. Andrews and work to reach it, both academically and socially. We as members of this community help create the environment hence the experience of St. Andrews. If we are looking for someone to blame when its not quite right, we should look in the mirror. It is up to us to make our experience here a postive one.

There are a lot of good things about St. Andrews and most of them can be attributed to its size. A size that affords us all in this community, administrator, faculty member, and student alike, the opportunity to make a postivie change in our envriment.

Renovations

From Page 1

created a more functional and efficient computer center. By expanding the floor space of its present location, a greater number of terminals connected to sophisticated computer systems will be made more accessible for student use.

A grant, recently acquired by the St. Andrews Press from the generous auspices of poet Ethel Fortner, will allow for development of several of the student literary publications. Formerly office space, the renovation will initiate the establishment of a better work area for the St. Andrews Press and Review.

A new reception room located in the Liberal Arts Building has been included in the complete renovation package creating a more logical reception area for campus visitors and guests.

Lastly, a large classroom also in the L.A. Building, has been converted into an Administrative Support Center offering partitioned work areas to better serve the specific needs of college personnel and to expedite matters of administrative concerp.

Defying Gravity

David Propst

During the summer a faculty designed Psychology Laboratory Facility was built in the lower floor of the Morgan-Jones Science Building.

This 3000-square-foot complex has greatly increased the opportunities for both faculty and student psychology research at St. Andrews. The flexible design of the lab will allow students to carry out independent projects as well as working with the Psychology Faculty on research.

The lab has six observation rooms fitted with one-way observation windows. These present a much more natural setting for observations, such as the social interactions of playing children. A sound proof room, controlled light lab, reading room, and other general purpose rooms are part of the facility. Also a proposal has been made for two Apple computers for the lab.

The Psychology Faculty

encourages anyone with the time and interest to help in the development of the new facility.

Two new science courses are being offered this fall at St. Andrews. Exploring The Physical World and Introduction To Computer Information Systems.

"Exploring" is designed for non-science majors and those who may want to test the waters of science with their toe before jumping into a standard introductory course. The class is team-taught by Doctors Dotson, Blackburn, Boggs, and Irvin.

"Computer Information Systems", taught by Dr. Wetmore, provides an introduction into the applications of computer hardware and software systems. Because the knowledge of how to interact with a computer is rapidly becoming essential in today's world, this course looks like a winner for everyone.

Hannas Resigns

From Page 1

Christine Hannas, Dean Hannas' wife, will continue to serve St. Andrews as a recruiter for the Admissions Office. "Through her efforts I will still be immersed in sharing the greatness of St. Andrews with the perspective students."

Welcome Back St. Andrews Students

The In Place wants you as its # shopper. Our shop is brimming with gift items & things for your dorm room such as hanging window shelves for plants, record racks, study lights, desk sets, albums and files. We have the neatest gift ideas, and we'll wrap for mailing, too. You must visit us to believe!
